TOOLS AND MATERIALS

Trawing is not only fun, it is also an important art form in itself. Even when you write or print your name, you are actually drawing! If you organize the lines, you can make shapes; and when you carry that a bit further and add dark and light shading, your drawings begin to take on a three-dimensional form and look more realistic. One of the great things about drawing is that you can do it anywhere, and the materials are very inexpensive. You do get what you pay for, though, so purchase the best you can afford at the time, and upgrade your supplies whenever possible. Although anything that will make a mark can be used for some type of drawing, you'll want to make certain your magnificent efforts will last and not fade over time. Here are some of the materials that will get you off to a good start.

Sketch Pads Conveniently bound drawing pads come in a wide variety of sizes, textures, weights, and bindings. They are particularly handy for making quick sketches and when drawing outdoors. You can use a large sketch-

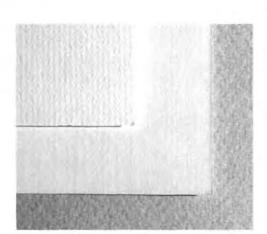

book in the studio for laying out a painting, or take a small one with you for recording quick impressions when you travel. Smooth- to mediumgrain paper texture (which is called the "tooth") is often an ideal choice.

Drawing Papers For finished works of art, using single sheets of drawing paper is best. They are available in a range of surface textures; smooth grain (plate and hot pressed), medium grain (cold pressed), and rough to very rough. The cold-pressed surface is the most versatile. It is of medium texture but it's not totally smooth, so it makes a good surface for a variety of different

Charcoal Papers Charcoal paper and tablets are also available in a variety of textures. Some of the surface finishes are quite pronounced, and you can use them to enhance the texture in your drawings. These papers also come in a variety of colors, which can add depth and visual interest to your drawings.

drawing techniques.

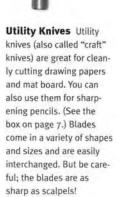

Work Station It is a good idea to set up a work area that has good lighting and enough room for you to work and lay out your tools. Of course, an entire room with track lighting, easel, and drawing table is ideal. But all you really need is a place by a window for natural lighting. When drawing at night, you can use a soft white light bulb and a cool white fluorescent light so that you have both warm (yellowish) and cool (bluish) light.

A kneaded eraser is a must. It can be formed into small wedges and points to remove marks in very tiny areas. Vinyl erasers are good for larger areas; they remove pencil marks completely. Neither eraser will damage the paper surface unless scrubbed too hard.

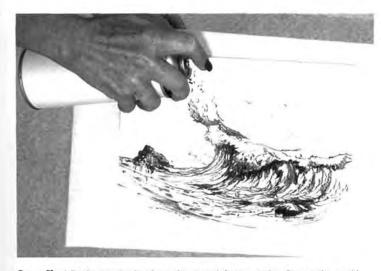

GATHERING THE BASICS

You don't need a lot of supplies to start; you can begin enjoying drawing with just a #2 or an HB pencil, a sharpener, a vinyl eraser, and any piece of paper. You can always add more pencils, charcoal, tortillons, and such later. When shopping for pencils, notice that they are labeled with letters and numbers; these indicate the degree of lead softness. Pencils with B leads are softer than ones with H leads, and so they make darker strokes. An HB is in between, which makes it very versatile and a good beginner's tool. The chart at right shows a variety of drawing tools and the kind of strokes that are achieved with each one. As you expand your pencil supply, practice shaping different points and creating different effects with each by varying the pressure you put on the pencil. The more comfortable you are with your tools, the better your drawings will be!

ADDING ON

Unless you already have a drawing table, you will probably want to purchase a drawing board. It doesn't have to be expensive; just get one large enough to accommodate individual sheets of drawing paper. Consider getting one with a cut-out handle, especially if you want to draw outdoors, so you can easily carry it with you.

Spray Fix A fixative "sets" a drawing and protects it from smearing. Some artists avoid using fixative on pencil drawings because it tends to deepen the light shadings and eliminate some delicate values. However, fixative works well for charcoal drawings. Fixative is available in spray cans or in bottles, but you need a mouth atomizer to use bottled fixative. Spray cans are more convenient, and they give a finer spray and more even coverage.

Flat For wider strokes, use the sharp point of a flat 4B. A large, flat sketch pencil is great for shading large areas, but the sharp, chiseled edge can be used to make thinner lines too.

Conté Crayon or Pencil Conté crayon is made from very fine Kaolin clay. Once it came only in black, white, red, and sanguine sticks, but now it's also available in a wide range of colored pencils. Because it's water soluble, it can be blended with a wet brush or cloth.

SHARPENING YOUR DRAWING IMPLEMENTS

sketching

A Utility Knife can be used to form different points (chiseled, blunt, or flat) than are possible with an ordinary pencil sharpener. Hold the knife at a slight angle to the pencil shaft, and always sharpen away from you, taking off only a little wood and graphite at a time.

A Sandpaper Block will quickly hone the lead into any shape you wish. It will also sand down some of the wood. The finer the grit of the paper, the more controllable the resulting point. Roll the pencil in your fingers when sharpening to keep the shape even.

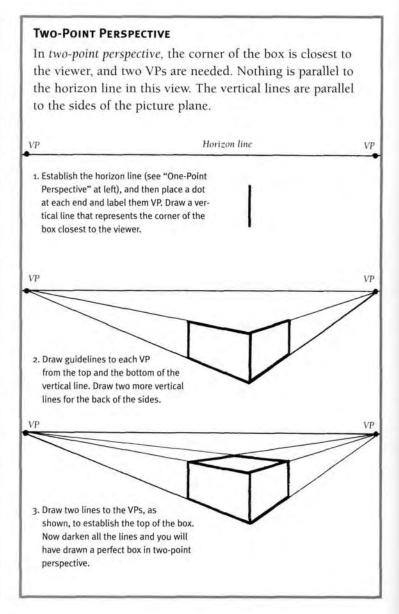

Rough Paper is wonderful for smoothing the pencil point after tapering it with sandpaper. This is also a great way to create a very fine point for small details. Again, it is important to gently roll the pencil while honing to sharpen the lead evenly.

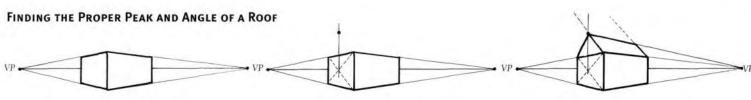

PERSPECTIVE

Drawing is actually quite simple; just sketch the shapes and masses you see. Sketch loosely and freely—if you discover something wrong with the shapes, you can refer to the rules of perspective below to make corrections. Your drawings don't need to be tight and precise as far as geometric perspective goes, but they should be within the boundaries of these rules for a realistic portrayal of the subject.

Practice is the only way to improve your drawing skills and to polish your hand-eye relationships. It's a good idea to sketch everything you see and keep all your drawings in a sketchbook so you can track the improvement. (See page 12 for more on sketching and keeping a sketchbook.) Following are a few exercises to introduce the basic elements of drawing in perspective. Begin with the one-point exercise.

ONE-POINT PERSPECTIVE In one-point perspective, the face of a box is the closest part to the viewer, and it is parallel to the horizon line (eye level). The bottom, top, and sides of the face are parallel to the picture plane. Horizon line 1. Draw a horizontal line and label it "eye level" or "horizon line." Draw a box below this line. 2. Now draw a light guideline from the top right corner to a spot on the horizon line. Place a dot there and label it VP (vanishing point). All side lines will go to the same VP. 3. Next, draw a line from the other corner as shown: then draw a horizontal line to establish the back of the box. VP 4. Finally darken all lines as shown, and you will have drawn a perfect box in one-point perspective. This box may become a book, a chest, a building, etc.

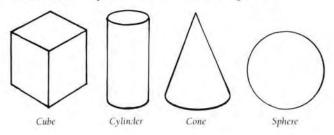

- 1. Draw a box in two-point perspective.
- Find the center of the face by drawing diagonal lines from corner to corner; then draw a vertical line upward through the center. Make a dot for the roof height.
- Using the vanishing point, draw a line for the angle of the roof ridge; then draw the back of the roof. The angled roof lines will meet at a third VP somewhere in the sky.

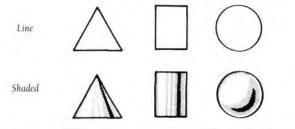

BASIC FORMS

There are four basic forms you should know: the cube, the cone, the cylinder, and the sphere. Each of these forms can be an excellent guide for beginning a complex drawing or painting. Below are some examples of these forms in simple use.

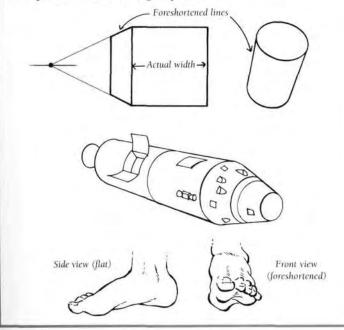

CREATING DEPTH WITH SHADING

To create the illusion of depth when the shapes are viewed straight on, shading must be added. Shading creates different values and gives the illusion of depth and form. The examples below show a cone, a cylinder, and a sphere in both the line stage and with shading for depth.

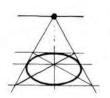

FORESHORTENING

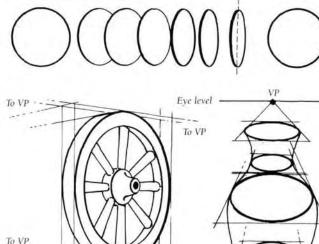

As defined in Webster's dictionary, to *foreshorten* is "to represent the lines (of an object) as shorter than they actually are in order to give the illusion of proper relative size, in accordance with the principles of perspective." Here are a few examples of foreshortening to practice.

ELLIPSES

An *ellipse* is a circle viewed at an angle. Looking across the face of a circle, it is foreshortened, and we see an ellipse. The axis of the ellipse is constant, and it is represented as a straight centerline through the longest part of the ellipse. The height is constant to the height of the circle. Here is the sequence we might see in a spinning coin.

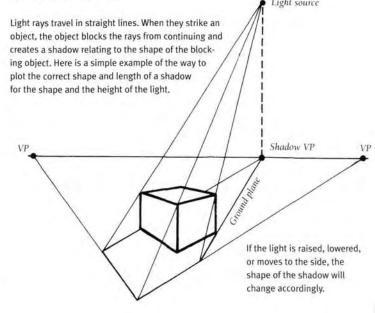

Notice the use of eye-level VPs to establish planes for the ellipses.

CAST SHADOWS

When there is only one light source (such as the sun), all shadows in the picture are cast by that single source. All shadows read from the same vanishing point. This point is placed directly under the light source, whether on the horizon line or more forward in the picture. The shadows follow the plane on which the object is sitting. Shadows also follow the contour of the plane on which they are cast.

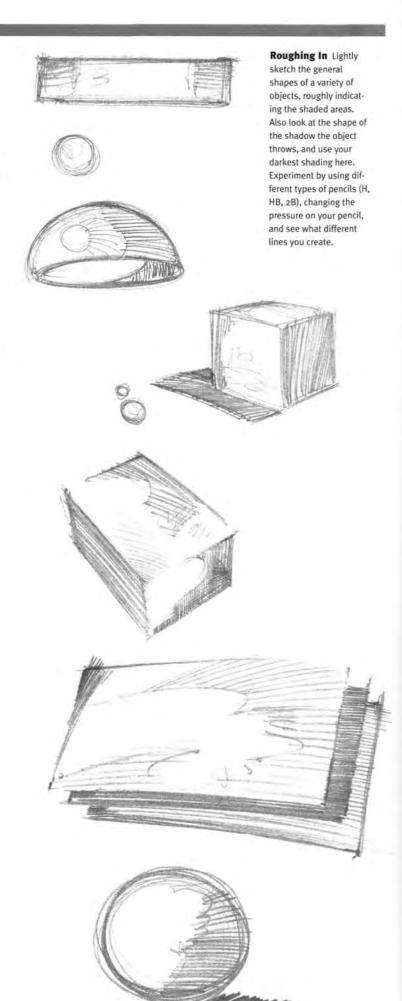

WARMING UP

Drawing is about observation. If you can look at your subject and really see what is in front of you, you're halfway there already—the rest is technique and practice. Warm up by sketching a few basic three-dimensional forms—spheres, cylinders, cones, and cubes. (See page 18 for more on basic shapes and their corresponding forms.) Gather some objects from around your home to use as references, or study the examples here. And by the way, feel free to put a translucent piece of paper over these drawings and trace them. It's not cheating—it's good practice.

STARTING OUT LOOSELY

Begin by holding the pencil loosely in the underhand position. (See page 18.) Then, using your whole arm, not just your wrist, make a series of loose circular strokes, just to get the feel of the pencil and to free your arm. (If you use only your wrist and hand, your sketches may appear stiff or forced.) Practice drawing freely by moving your shoulder and arm to make loose, random strokes on a piece of scrap paper. Keep your grip relaxed so your hand does not get tired or cramped, and make your lines bold and smooth. Now start doodling—scribble a bunch of loose shapes without worrying about drawing perfect lines. You can always refine them later.

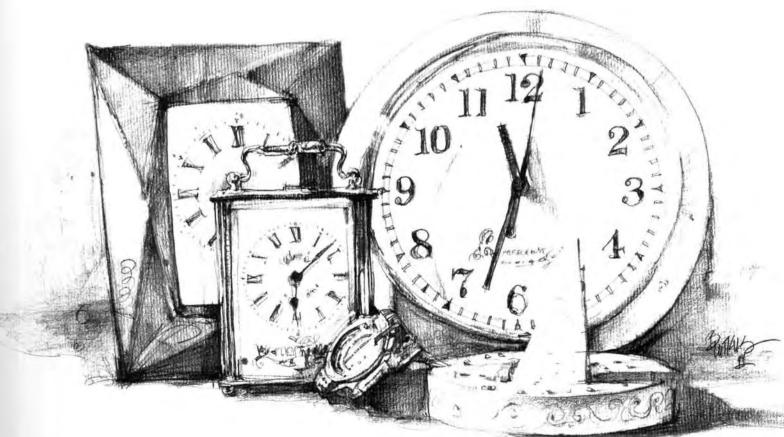

BLOCKING IN A SIMPLE COMPOSITION

Now loosely sketch an assortment of shapes in a simple still life. (See Chapter 2 for a more in-depth coverage of drawing still lifes.) Collect objects that have a variety of sizes and shapes—large and small, tall and short, spherical and rectangular—and put them together in an interesting arrangement. Then start blocking in the shapes using a sharp HB pencil. Remember to use your whole arm and to work quickly so you don't start tightening up and getting caught up in details. The more you practice drawing this way, the more quickly your eye will learn to see what's really there.

Measuring Up Before you start sketching the individual shapes, make sure you establish the correct proportions. When drawing freely like this, it's easy to lose sight of the various size relationships. Draw a few guidelines to mark the height of each object, and keep your sketches within those lines.

Time's Up You can create this piece by lightly roughing out the objects using rectangles and circles. Then refine the shapes and gently erase the initial guidelines.

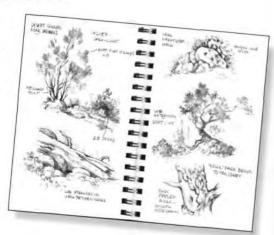

STARTING WITH SKETCHES

Sketching is a wonderful method of quickly capturing an impression of a subject. Depending on the pencil lead and technique used, you can swiftly record a variety of shapes, textures, moods, and actions. For example, dark, bold strokes, can indicate strength and solidity; lighter, more feathered strokes can convey a sense of delicacy; and long, sweeping strokes can suggest movement. (See the examples below for a few common sketching techniques.) Some artists often make careful sketches to use as reference for more polished drawings later on, but loose sketches are also a valuable method of practice and a means of artistic expression, as the examples on these pages show. You might want to experiment with different strokes and sketching styles. With each new exercise, your hand will become quicker and more skilled.

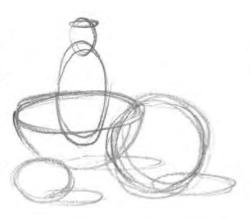

Recording Your Impressions

Here are examples of a few pages that might be found in an artist's sketchbook.

Along with sketching interesting things you see, make notes about the mood, colors, light, time of day—anything that might be helpful when you refer back to them. It's a good idea to carry a pad and pencil with you at all times, because you never know when you will come across an interesting subject you'd like to sketch.

Using Circular Strokes Loose, circular strokes are great for quickly recording simple subjects or for working out a still life arrangement, as shown in this example. Just draw the basic shapes of the objects and indicate the shadows cast by the objects; don't pay attention to rendering details at this point. Notice how much looser these lines are compared to the examples from the sketchbook at right.

Scribbling Free, scribbled lines can also be used to capture the general shapes of objects such as clouds, treetops, or rocks. Use a soft B lead pencil with a broad tip to sketch the outlines of the clouds; then roughly scribble in a suggestion of shadows, hardly ever lifting your pencil from the drawing paper. Note how this technique effectively conveys the puffy, airy quality of the clouds.

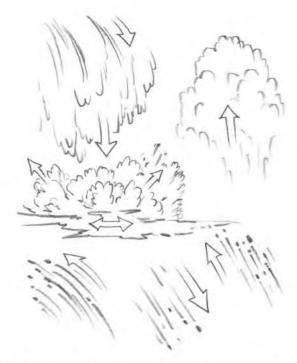

Using Wide, Bold Strokes This method is used for creating rough textures and deep shadows, making it ideal for subjects such as foliage and hair and fur textures. For this example, use the side of a 2B pencil, varying the pressure on the lead and changing the pencil angle to produce different values (lights and darks) and line widths. This creates the realistic form and rough texture of a sturdy shrub.

Sketching for Reference Material Here is an example of using a rough sketch as a source of reference for a more detailed drawing. Use loose, circular strokes to record an impression of the flower's general shape, keeping your lines light and soft to reflect the delicate nature of the subject. Then use the sketch as a guide for the more fully rendered flower above.

Conveying Movement To show movement in a drawing, you need to fool the viewer's eye and make it appear as if the object is moving up, down, or sideways. In the examples above, the arrows indicate the direction of movement—but your pencil strokes should actually be made in the opposite direction. Press down at the beginning of each stroke to get a strong line, lifting your pencil at the end to taper it off. Note how these lines convey the upward and downward direction of water and the rising and billowing movement of smoke.

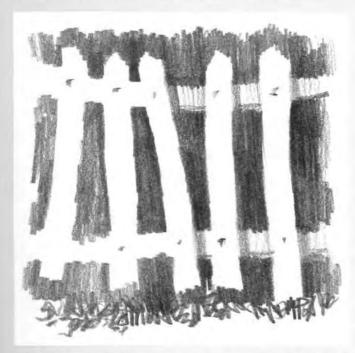

Rendering Wave Action Quickly sketch a wave, using long, flowing strokes to indicate the arcing movement of the crest, and make tightly scribbled lines for the more random motions of the water as it breaks and foams. As in the examples at left, your strokes should taper off in the direction opposite the movement of the wave. Also sketch in a few meandering lines in the foreground to depict the slower movement of the pooled water as it flows and recedes.

FOCUSING ON THE NEGATIVE SPACE

Sometimes it's easier to draw the area *around* an object instead of drawing the object itself. The area around and between objects is called the "negative space." (The actual objects are the "positive space.") If an object appears to be too complex or if you are having trouble "seeing" it, try focusing on the negative space instead. At first it will take some effort, but if you squint your eyes, you'll be able to blur the details so you see only the negative and positive

spaces. You'll find that when you draw the negative shapes around an object, you're also creating the edges of the object at the same time. The examples below are simple demonstrations of how to draw negative space. Select some objects in your home and place them in a group, or go outside and look at a clump of trees or a group of buildings. Try sketching the negative space, and notice how the objects seem to emerge almost magically from the shadows!

Filling In Create the white picket fence by filling in the negative spaces around the slats. Don't draw the slats—instead draw the shapes surrounding them and then fill in the shapes with the side of a soft lead pencil. Once you establish the shape of the fence, refine the sketch a bit by adding some light shading on the railings.

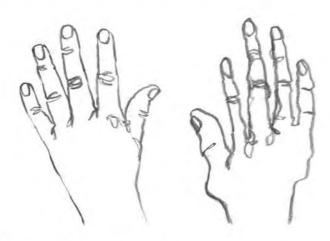

Silhouetting This stand of trees is a little more complicated than the fence, but having sketched the negative spaces simplified it immensely. The negative shapes between the tree trunks and among the branches are varied and irregular, which adds a great deal of interest to the drawing.

LEARNING TO SEE

Many beginners draw without really looking carefully at their subject; instead of drawing what they actually see, they draw what they think they see. Try drawing something you know well, such as your hand, without looking at it. Chances are your finished drawing won't look as realistic as you expected. That's because you drew what you think your hand looks like. Instead, you need to forget about all your preconceptions and learn to draw only what you really see in front of you (or in a photo). Two great exercises for training your eye to see are contour drawing and gesture drawing.

PENCILING THE CONTOURS

In contour drawing, pick a starting point on your subject and then draw only the contours—or outlines—of the shapes you see. Because you're not looking at your paper, you're training your hand to draw the lines exactly as your eye sees them. Try doing some contour drawings of your own; you might be surprised at how well you're able to capture the subjects.

Drawing "Blind" The contour drawing above can be made while occasionally looking down at the paper while you draw your hand. The drawing on the right is an example of a blind contour drawing, where you can draw without looking at your paper even once. It will be a little distorted, but it's clearly your hand. Blind contour drawing is one of the best ways of making sure you're truly drawing only what you see.

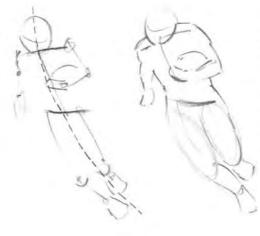

To test your observation skills, study an object very closely for a few minutes, and then close your eyes and try drawing it from memory, letting your hand follow the mental image.

DRAWING GESTURE AND ACTION

Another way to train your eye to see the essential elements of a subject—and train your hand to record them rapidly—is through *gesture drawing*. Instead of rendering the contours, gesture drawings establish the *movement* of a figure. First determine the main thrust of the movement, from the head, down the spine, and through the legs; this is the *line of action*, or *action line*. Then briefly sketch the general shapes of the figure around this line. These quick sketches are great for practicing drawing figures in action and sharpening your powers of observation. (See pages 134–137 for more on drawing people in action.)

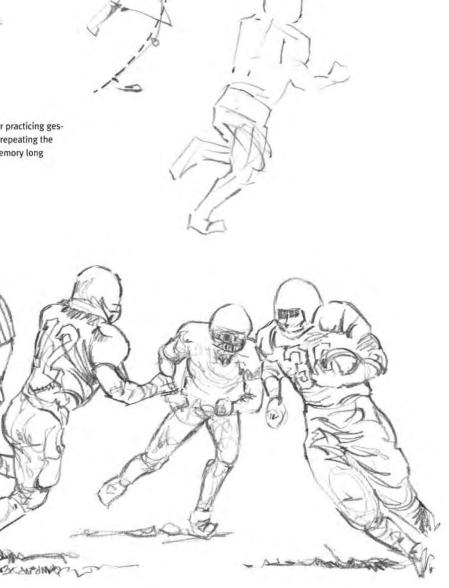

Starting with an Action
Line Once you've established
the line of action, try building
a "skeleton" stick drawing
around it. Pay particular
attention to the angles of the
shoulders, spine, and pelvis.
Then sketch in the placement
of the arms, knees, and feet
and roughly fill out the basic
shapes of the figure.

Working Quickly To capture the action accurately, work very quickly, without including even a suggestion of detail. If you want to correct a line, don't stop to erase; just draw over it.

Studying Repeated Action Group sports provide a great opportunity for practicing gesture drawings and learning to see the essentials. Because the players keep repeating the same action, you can observe each movement closely and keep it in your memory long enough to sketch it correctly.

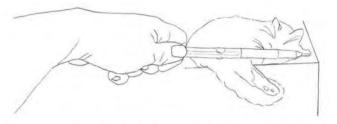

warrants the ward

MEASURING WITH A PENCIL

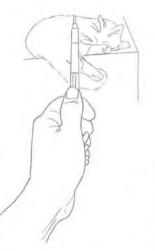

D rawing the correct proportions—the size relationships between different parts of an object—is easier if you learn to take measurements directly from your subject and then transfer

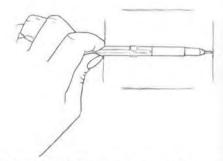

those to your paper. You can measure your subject with just about anything (for example, your thumb). Using a pencil is a very easy and accurate way to take measurements, as shown below.

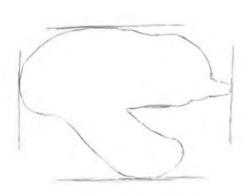

Measuring Width Close one eye and hold out your arm with your pencil positioned horizontally between your fingers, and line up the tip of your pencil with one side of the subject. Move your thumbnail down the pencil until it just touches the opposite side of your subject.

Measuring Height Using the same procedure, measure the distance between the highest and lowest points of your subject.

Transferring Measurements Mark the length of your pencil measurements on your paper. If you want to enlarge the subject, multiply each measurement by two or three. If you extend the initial markings to this new measurement, you can form a box around your subject that will work like a grid to help you draw your subject using correct proportions.

Adding Up the Numbers After you've created the basic rectangle, using the tallest and widest measurements of the subject, sketch the cat's general shape within the rectangle. Keep the shape simple and add details later.

Mapping Out Elements As long as you stay in the same position with your arm extended at full length, you can take additional measurements, such as the cat's foot here, which will be in proportion to the rest of the body.

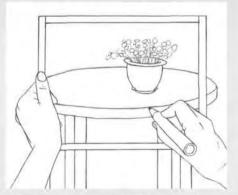

Correcting Calculations While progressing from a basic shape to a gradually more detailed outline drawing, take measurements before applying any marks to keep your drawing in proportion.

DRAWING WHAT YOU SEE

Window Outline Exercise To train your eye and brain to observe, stand or sit in front of a window and trace the outline of a tree or car onto the glass with an erasable marker. If you move your head, your line will no longer correspond accurately with the subject, so try to keep it still.

Portable Window Create a portable window from a piece of rigid acrylic, which is available at your local hardware store. Try the same window outline exercise indoors; it will help you understand how to reproduce the challenging angles and curves of your subject.

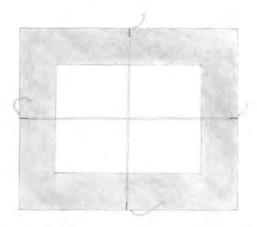

Foreshortening in a Window Drawing
Foreshortening—when an object is angled toward the
viewer—causes the closest parts of an object to appear
much larger than parts that are farther away. This can
be a difficult concept to master, but a window drawing,
shown above, simplifies this process.

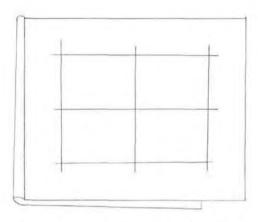

DRAWING WITH A GRID

Another effective way to learn how to draw what you see is the grid method. The viewing grid shown below is an open, framelike device divided with string into several sections of the same size. This tool helps you break down the scene into small,

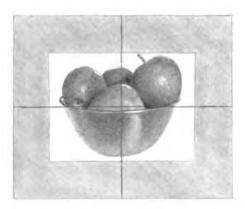

manageable parts, giving you clues as to where your subject should be placed on the paper. A grid stand will hold it steady and in the same place for you.

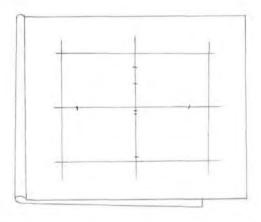

Step One Find the exact center of the artist's viewfinder included in this kit. You can also make one using cardboard and string. Cut a rectangle out of the center of a piece of cardboard. Find the exact center of all four sides of the outer rectangle and make a small cut on the outside border. Slip two pieces of string through the slits—one horizontally and one vertically—to divide your viewing grid into four equal sections.

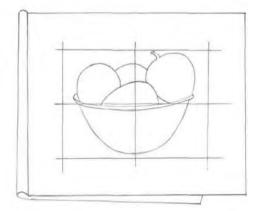

Step Two Use a ruler and a pencil to lightly draw the same size grid (or a proportionally larger or smaller one) with the same number of squares on a piece of drawing paper. To draw a larger or smaller grid, multiply or divide each measurement by the same number, usually two or three.

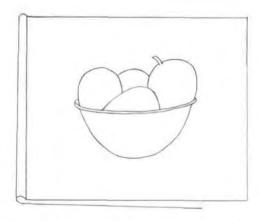

Step Three Hold the cardboard grid at arm's length and use it to frame the scene or object you want to draw. You must keep the grid and your head in the same position for the duration of the drawing, so make yourself comfortable from the start.

Step Four With one eye closed, observe your subject through the grid and notice at what points its outlines cross the grid lines. Then carefully transfer these points to the grid on your drawing paper.

Step Five Now that you've plotted these important reference points, you can begin to fill in the lines between the points. Draw one section at a time, looking through your grid and noting where the shape fits within the grid lines.

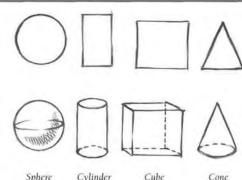

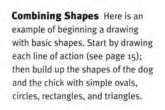

Step Six Keep drawing, square by square, frequently studying the subject through the grid until the drawing is complete. Then erase the grid lines, and you will have an accurate line drawing of your subject.

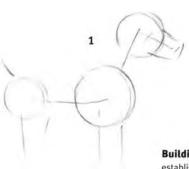

BEGINNING WITH BASIC SHAPES

Anyone can draw just about anything by simply breaking down the subject into the few basic shapes: circles, rectangles, squares, and triangles. By drawing an outline around the basic shapes of your subject, you've drawn its shape. But your subject also has depth and dimension, or *form*. As you learned on pages 9–10, the corresponding forms of the basic shapes are spheres, cylinders, cubes, and cones. For example, a ball and a grapefruit are spheres, a jar and a tree trunk are cylinders, a box and a building are cubes, and a pine tree and a funnel are cones. That's all there is to the first step of every drawing: sketching the shapes and developing the forms. After that, it's essentially just connecting and refining the lines and adding details.

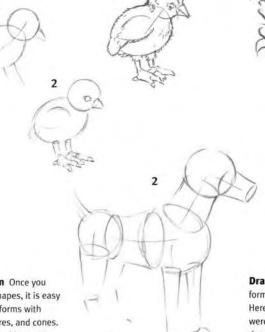

Creating Forms Here are diagrams showing how to draw the forms of the four basic shapes. The ellipses show the backs of the circle, cylinder, and cone, and the cube is drawn by connecting two squares with parallel lines. (How to shade these forms is shown on page 10.)

Building Form Once you establish the shapes, it is easy to build up the forms with cylinders, spheres, and cones. Notice that the subjects are now beginning to show some depth and dimension.

Drawing Through *Drawing through* means drawing the complete forms, including the lines that will eventually be hidden from sight. Here when the forms were drawn, the back side of the dog and chick were indicated. Even though you can't see that side in the finished drawing, the subject should appear three-dimensional. To finish the drawing, simply refine the outlines and add a little fluffy texture to the downy chick.

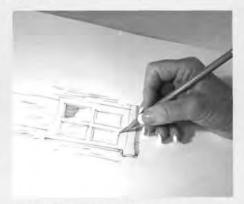

HOLDING YOUR DRAWING PENCIL

Basic Underhand The basic underhand position allows your arm and wrist to move freely, which results in fresh and lively sketches. Drawing in this position makes it easy to use both the point and the side of the lead by simply changing your hand and arm angle.

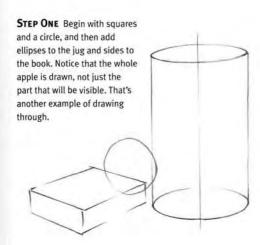

Underhand Variation Holding the pencil at its end lets you make very light strokes, both long and short. It also gives you a delicate control of lights, darks, and textures. Place a protective "slip sheet" under your hand when you use this position so you don't smudge your drawing.

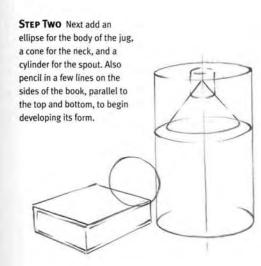

Writing The writing position is the most common one, and it gives you the most control for fine detail and precise lines. Be careful not to press too hard on the point, or you'll make indentations in the paper. And remember not to grip the pencil too tightly, as your hand may get cramped.

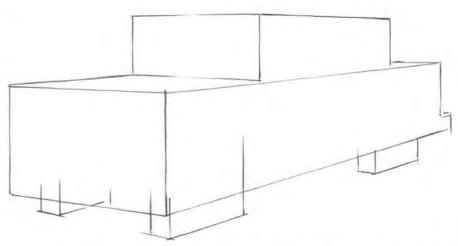

SEEING THE SHAPES AND FORMS

Now train your eye and hand by practicing drawing objects around you. Set up a simple still life—like the one on page 11 or the arrangement below—and look for the basic shapes in each object. Try drawing from photographs, or copy the drawings on this page. Don't be afraid to tackle a complex subject; once you've reduced it to simple shapes, you can draw anything!

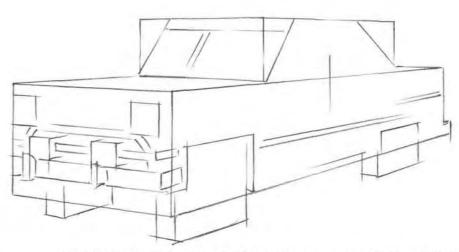

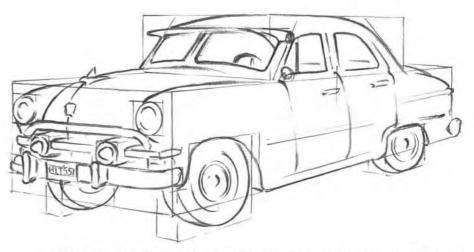

STEP ONE Even a complex form such as this '51 Ford is easy to draw if you begin with the most basic shapes you see. At this stage, ignore all the details and draw only squares and rectangles. These are only guidelines, which you can erase when your drawing is finished, so draw lightly and don't worry about making perfectly clean corners.

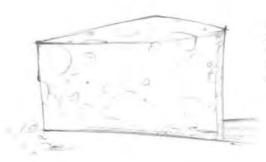

STEP TWO Using those basic shapes as a guide, start adding more squares and rectangles for the headlights, bumper, and grille. Start to develop the form of the windshield with angled lines, and then sketch in a few straight lines to place the door handle and the side detail.

STEP THREE Once you have all the major shapes and forms established, begin rounding the lines and refining the details to conform to the car's design. Your guidelines are still in place here, but as a final step, you can clean up the drawing by erasing the extraneous lines.

DEVELOPING FORM

Values tell us even more about a form than its outline does. Values are the lights, darks, and all the shades in between that make up an object. In pencil drawing, the values range from white to grays to black, and it's the range of values in shading and highlighting that gives a three-dimensional look to a two-dimensional drawing. Focus on building dimension in your drawings by modeling forms with lights and darks.

Laying in Values Here the

light is coming from the left, so

the cast shadows fall to the right.

Lightly shade in the middle values on the side of the cheese, and

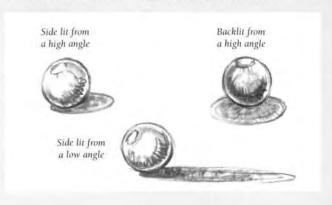

place the darkest values in holes

where the light doesn't hit.

Sketching the Shapes First lightly sketch the basic shape of this angular wedge of cheese.

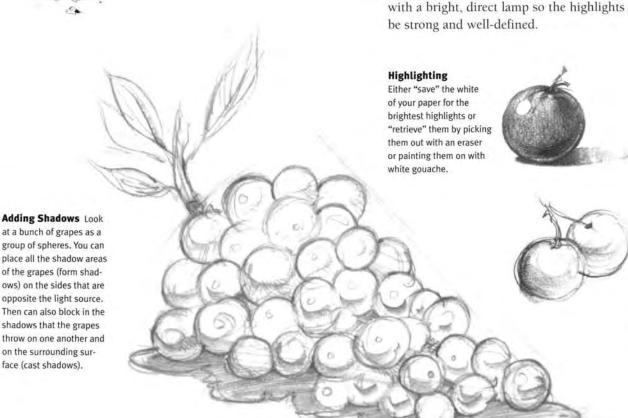

DRAWING CAST SHADOWS

Cast shadows are important in drawing for two reasons. First, they anchor the image, so it doesn't seem to be floating in air. Second, they add visual interest and help link objects together. When drawing a cast shadow, keep in mind that its shape will depend on the light source as well as on the shape of the object casting it. For example, as shown below, a sphere casts a round or elliptical shadow on a smooth surface, depending on the angle of the light source. The length of the shadow is also affected: the lower the light source, the longer the shadow.

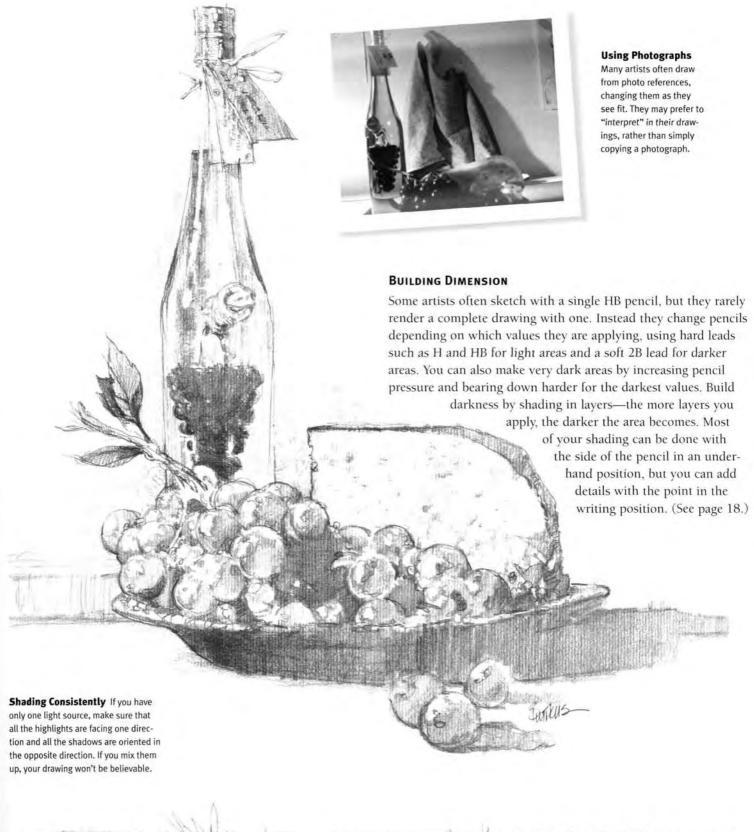

UNDERSTANDING LIGHT AND SHADOWS

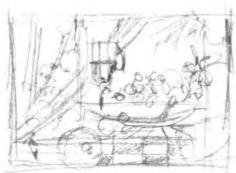

To develop a three-dimensional form, you need to know where to place the light, dark, and medium values of your subject. This will all depend on your light source. The angle, distance, and intensity of the light will affect both the shadows on an object (called "form shadows") and the shadows the object throws on other surfaces (called "cast shadows"; see the box above). You might want to practice drawing form and cast shadows on a variety of round and angular objects, lighting them with a bright, direct lamp so the highlights and shadows will be strong and well-defined.

Shading Shade in the middle value of these grapes with a couple of swift strokes using the side of a soft lead pencil. Then increase the pressure on your pencil for the darkest values, and leave the paper white for the lights.

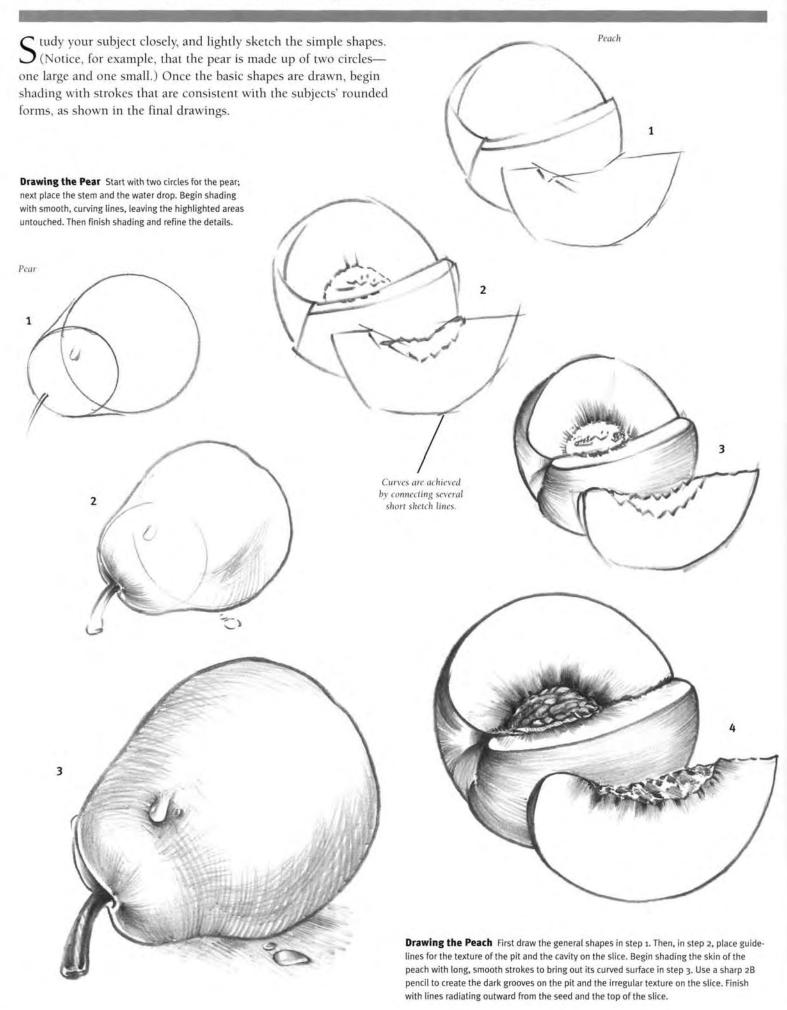

Getting to Know Your Subject Quick, "thumbnail" sketches are invaluable for developing a drawing. You can use them to play with the positioning, format, and cropping until you find an arrangement you like. These aren't finished drawings by any means, so you can keep them rough. And don't get too attached to them—they're meant to be changed.

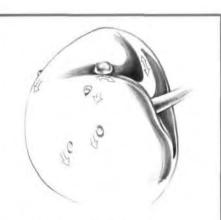

STILL LIFES

Still life drawings offer a great opportunity to learn and practice a variety of drawing skills, including developing form, applying shading, and using perspective. Still life compositions traditionally depict a carefully arranged grouping of a number of household objects, such as fruit, vegetables, glassware, or pottery—all of which offer a wide range of textures, sizes, and shapes. But you don't have to restrict yourself to traditional items; use your artistic license to get as creative as you want! The following lessons will guide you through the basics of drawing still lifes, from designing the composition to blocking in the basic shapes and adding the final details for depth and texture.

FRUIT AND NUTS BY WILLIAM F. POWELL

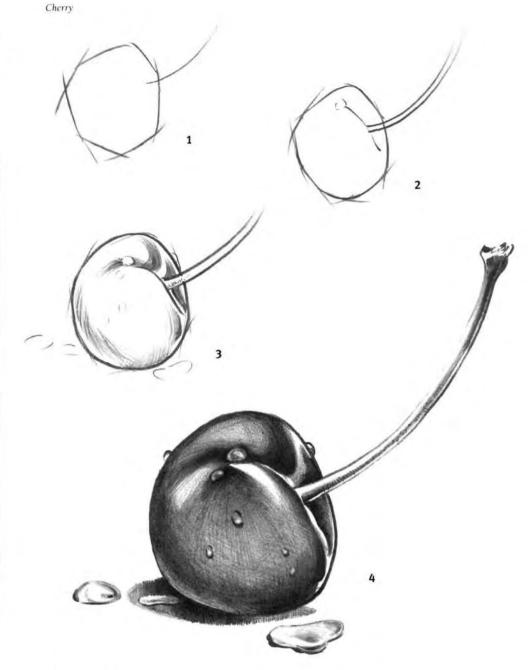

Drawing the Cherry To start the cherry, lightly block in the round shape and the stem, using a combination of short sketch lines. Smooth the sketch lines into curves, and add the indentation for the stem. Then begin light shading in step 3. Continue shading until the cherry appears smooth. Use the tip of a kneaded eraser to remove any shading or smears that might have gotten into the highlights. Then fill in the darker areas using overlapping strokes, changing stroke direction slightly to give the illusion of three-dimensional form to the shiny surface.

Water Drops Detail Use the arrow directions shown above as a guide for shading the cherry according to its contour. Leave light areas for the water drops, and shade inside them, keeping the values soft.

Pools of Water Detail Sketch the outline shape of the pool of water with short strokes, as you did with the cherry. Shade softly, and create highlights with a kneaded eraser.

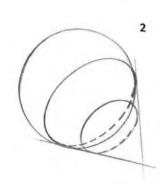

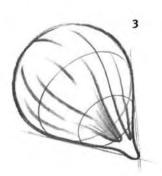

Rendering the Chestnuts To draw these chestnuts, use a circle and two intersecting lines to make a cone shape in steps 1 and 2. Then place some guidelines for ridges in step 3. Shade the chestnuts using smooth, even strokes that run the length of the objects. These strokes bring out form and glossiness. Finally add tiny dots on the surface. Make the cast shadow the darkest part of the drawing.

Chestnuts

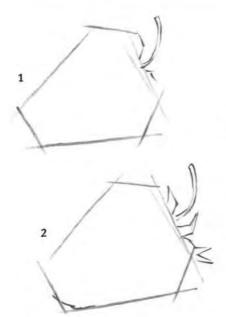

STRAWBERRIES BY WILLIAM F. POWELL

These strawberries were drawn on platefinish Bristol board using only an HB pencil. Block in the berry's overall shape in steps 1 and 2 to the right. Then lightly shade the middle and bottom in step 3, and scatter a seed pattern over the berry's surface in step 4. Once the seeds are in, shade around them.

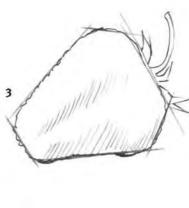

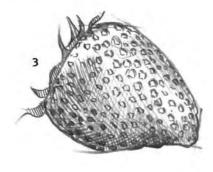

Sketch a grid for the surface pattern.

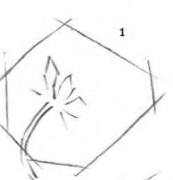

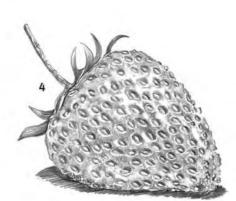

Drawing Guidelines Draw a grid on the strawberry; it appears to wrap around the berry, helping to establish its seed pattern and three-dimensional form.

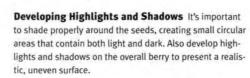

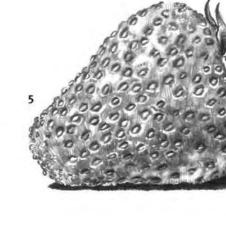

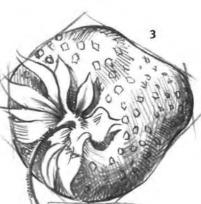

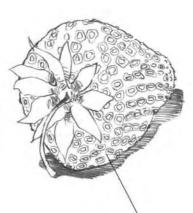

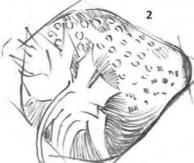

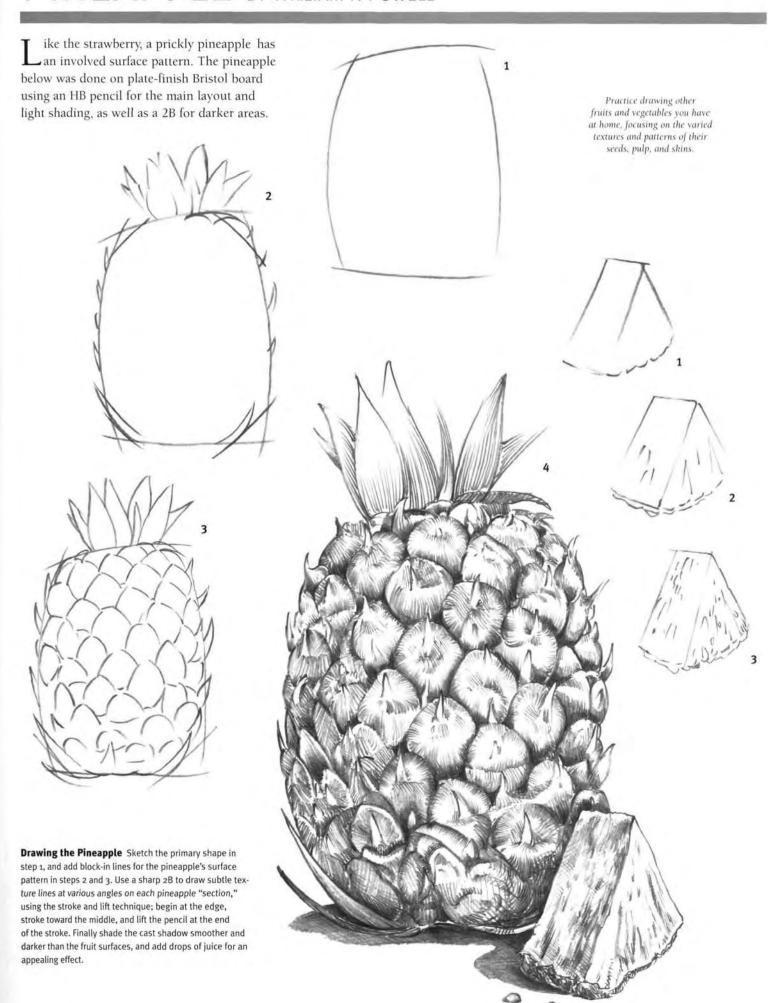

Indicate the shaded areas by lightly drawing circles around the seeds as guides.

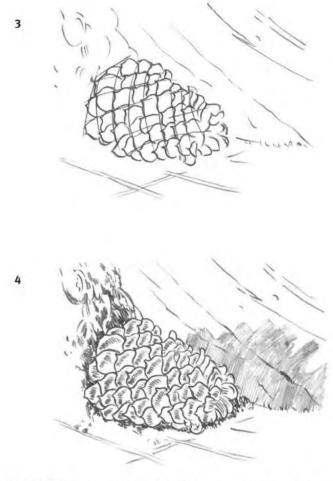

PINEAPPLE BY WILLIAM F. POWELL

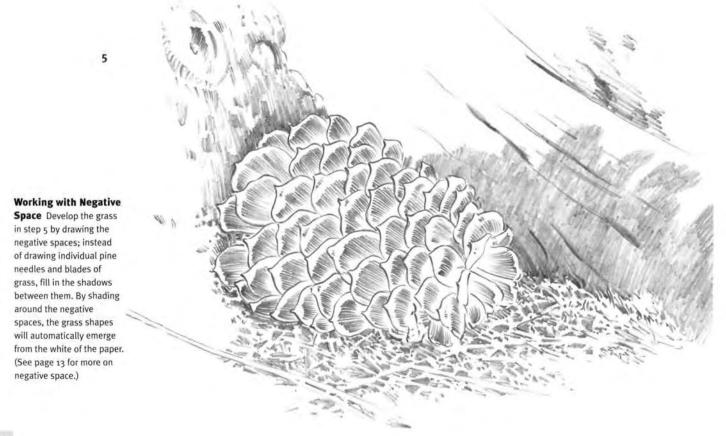

PINECONE BY WILLIAM F. POWELL

ompare the highly textured surface pattern of the pinecone with the strawberry and pineapple on pages 26–27. Using an HB pencil, position the pinecone with light guidelines in step 1. Then indicate the tree trunk and pine needles in step 2, and add a grid for the pattern on the pinecone.

Establishing Detail Draw the shapes of the spiked scales, which change in size from one end of the cone to the other. In step 4, begin shading the cone and surrounding objects. Make the cast shadow appear to follow the curve of the tree root.

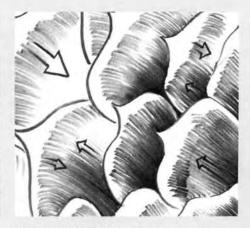

DEVELOPING DETAILS

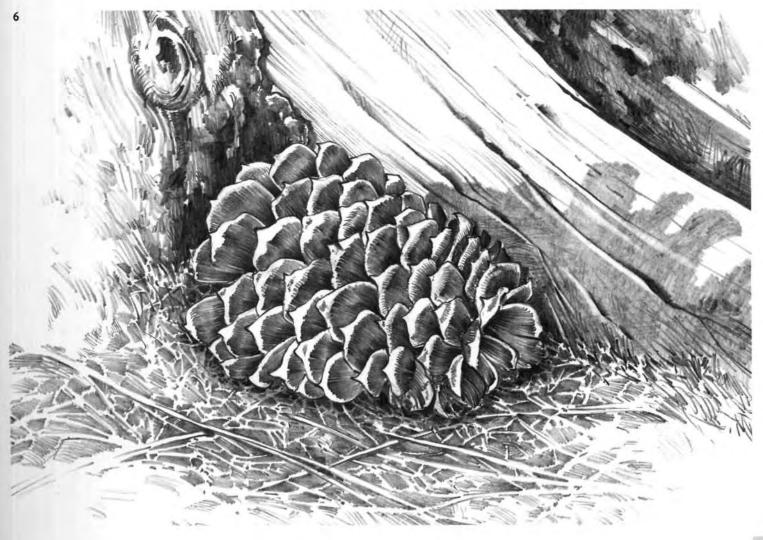

Tree Texture Guidelines To render the bark and knothole of the gnarled tree trunk, first lightly draw in the texture design. Then, when you're happy with the general appearance, proceed with the shading.

Tree Texture Shading Short, rough strokes give the impression of texture, whereas long, smooth strokes provide interest and contrast. Use a combination of the two strokes to provide the bark's shading and details.

Pinecone Scale Shading Develop each pinecone scale separately, following the arrows on the diagram above for the direction of your strokes. Keep the hatched strokes smooth and close together.

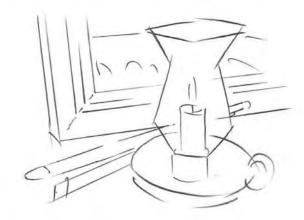

CANDLELIGHT BY WILLIAM F. POWELL

T his drawing was done on plate-finish Bristol board with HB and 2B pencils. The pewter-and-glass candlestick, painting,

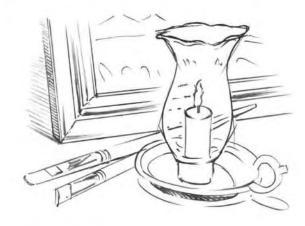

and paintbrushes were arranged on a table; then a quick sketch was made to check the composition, as shown in step 1.

1

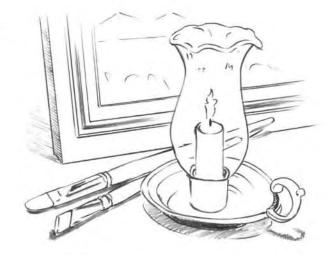

Blocking In the Composition When setting up a still life, keep rearranging the items until the composition suits you. If you're a beginner, you might want to keep the number of objects to a minimum—three to five elements is a good number to start with.

2

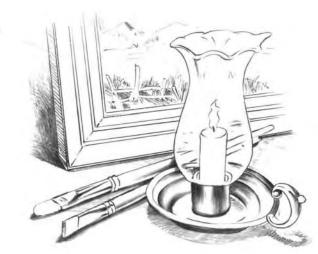

Developing Shape and Form In step 2, place all the guidelines of your subjects; then begin shading with several layers of soft, overlapping strokes in step 3. Gradually develop the dark areas rather than all at the same time.

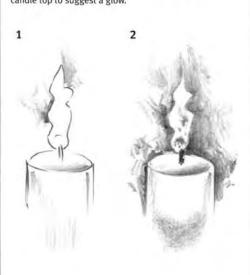

3

4

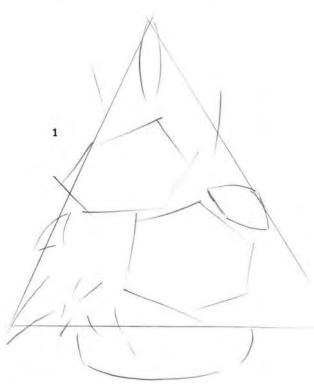

Flame Detail A candle flame isn't difficult to draw. Just make a simple outline, keep all shading soft, and make the wick the darkest part. Be sure to leave white area in the candle top to suggest a glow.

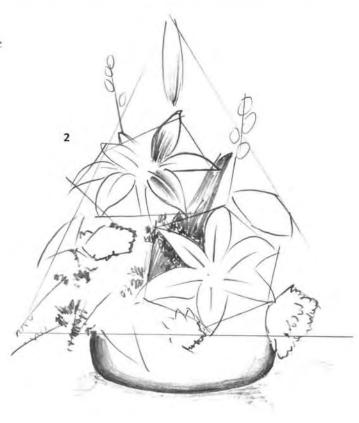

FLORAL ARRANGEMENT BY WILLIAM F. POWELL

 $B_{\rm artist.}$ Therefore this drawing was drawn more loosely than the previous one. Begin with an HB pencil, lightly drawing in the basic shapes within the floral arrangement.

Establishing the Shading The sketch above shows shading strokes for the flower petals and leaves. Try not to add too much detail at this stage of your drawing.

Blending the Cast Shadows As shown in the closeup above, the cast shadow needs the smoothest blending. Position the shadows using the side of an HB pencil; then blend softly with a paper stump.

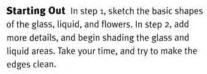

LIQUID AND GLASS BY WILLIAM F. POWELL

This drawing was done on Bristol board with a plate (smooth) finish. Use an HB pencil for most of the work and a 2B for the dark shadows. A flat sketch pencil is good for creating the background texture.

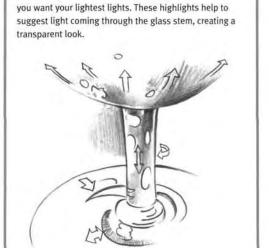

Developing the Background Use the flat lead of a sketching pencil for the background, making the background darker than the cast shadows. Note the pattern of lights and darks that can be found in the cast shadow.

Placing Highlights Use the arrows below as a guide for shading. Remember to keep the paper clean where

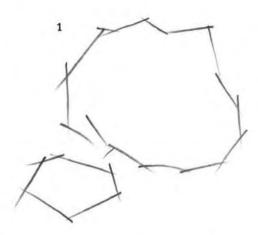

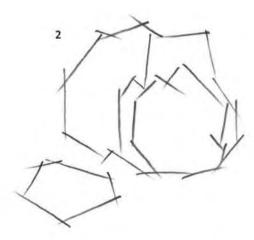

Finalizing Highlights and Shadows Use the finished drawing as your guide for completing lights and darks. If pencil smudges accidentally get in the highlights, clean them out with a kneaded eraser. Then use sharp-pointed HB and 2B pencils to add final details.

ROSE WITH WATERDROPS BY WILLIAM F. POWELL

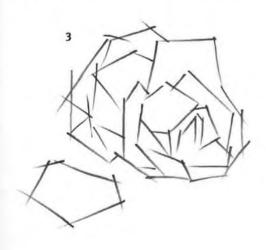

Many beginning artists believe a rose is too difficult to draw and therefore may shy away from it. But, like any other object, a rose can be developed step by step from its most basic shapes.

Establishing Guidelines Use an HB pencil to block in the overall shapes of the rose and petal, using a series of angular lines. Make all guidelines light so you won't have trouble removing or covering them later.

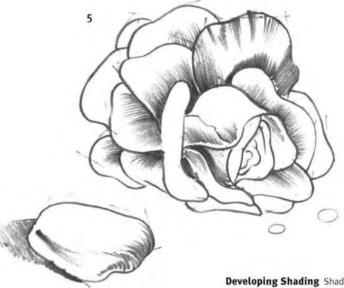

Following Through Continue adding guidelines for the flower's interior, following the angles of the petal edges.

Adding Values Now begin shading. Stroke from inside each petal toward its outer edge.

Developing Shading Shade from the outer edge of each petal, meeting the strokes you drew in the opposite direction. Use what is known as a stroke and lift technique. For this technique, you should draw lines that gently fade at the end. Just press firmly, lifting the pencil as the stroke comes to an end.

SIMPLE FLOWERS BY WILLIAM F. POWELL

This morning glory and gardenia are great flowers for learning a few simple shading techniques called "hatching" and "crosshatching." *Hatch* strokes are parallel diagonal lines; place them close together for dark shadows, and space them farther apart for lighter values. *Cross-hatch* strokes are made by first drawing hatch strokes and then overlapping them with hatch strokes that are angled in the opposite direction. Examples of both strokes are shown in the box at the bottom of the page.

Step One Look carefully at the overall shape of a morning glory and lightly sketch a polygon with the point of an HB pencil. From this three-quarter view, you can see the veins that radiate from the center, so sketch in five curved lines to place them. Then roughly outline the leaves and the flower base.

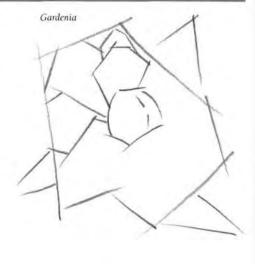

Step Two Next draw the curved outlines of the flower and leaves, using the guidelines for placement. You can also change the pressure of the pencil on the paper to vary the line width, giving it a little personality. Then add the stamens in the center.

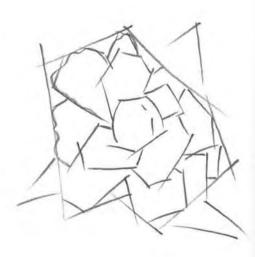

Step Three Now you are ready to add the shading. With the rounded point and side of an HB pencil, add a series of hatching strokes, following the shape, curve, and direction of the surfaces of the flower and leaves. For the areas more in shadow, make darker strokes placed closer together, using the point of a soft 2B pencil.

Step One The gardenia is a little more complicated to draw than the morning glory, but you can still start the same way. With straight lines, block in an irregular polygon for the overall flower shape and add partial triangles for leaves. Then determine the basic shape of each petal and begin sketching in each, starting at the center of the gardenia.

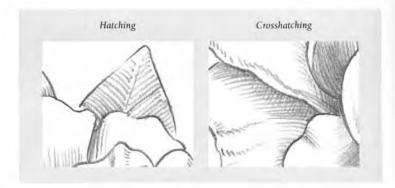

Step Two As you draw each of the petal shapes, pay particular attention to where they overlap and to their proportions, or their size relationships-how big each is compared with the others and compared with the flower as a whole. Accurately reproducing the pattern of the petals is one of the most important elements of drawing a flower. Once all the shapes are laid in, refine their outlines.

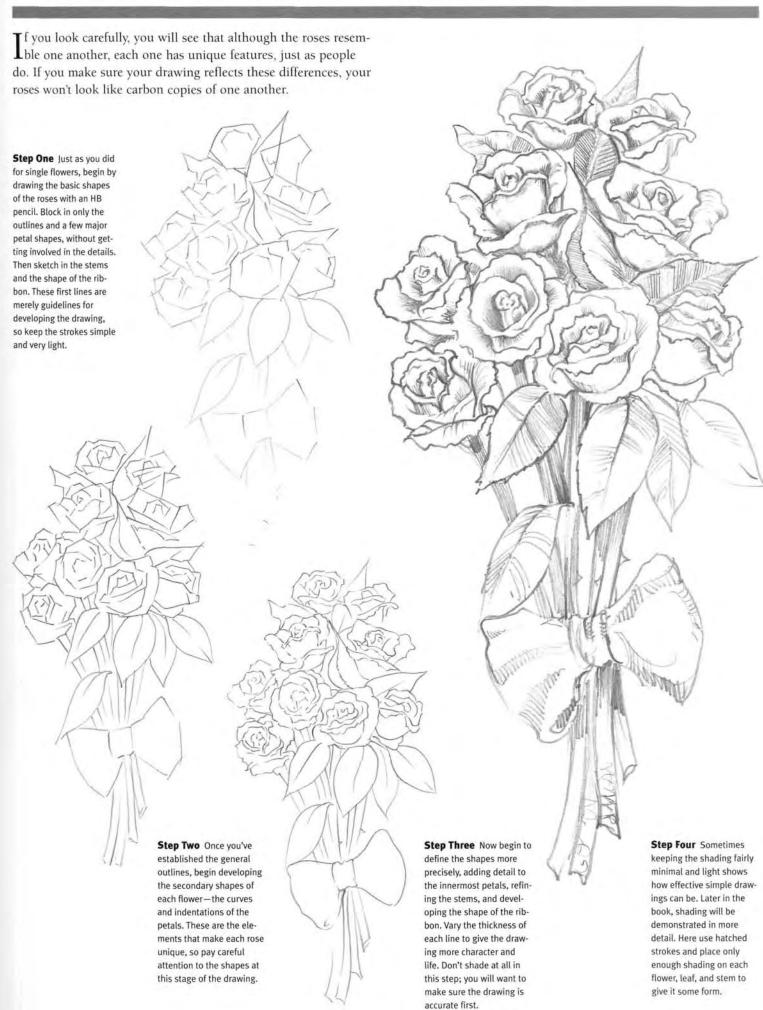

Step Three Again, using the side and blunt point of an HB pencil, shade the petals and the leaves, making your strokes follow the direction of the curves. Lift the pencil at the end of each petal stroke so the line tapers and lightens, and deepen the shadows with overlapping strokes in the opposite direction (called crosshatching) with the point of a 2B pencil.

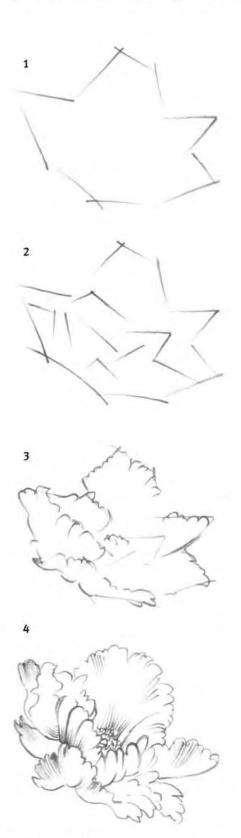

FLORAL BOUQUET BY WILLIAM F. POWELL

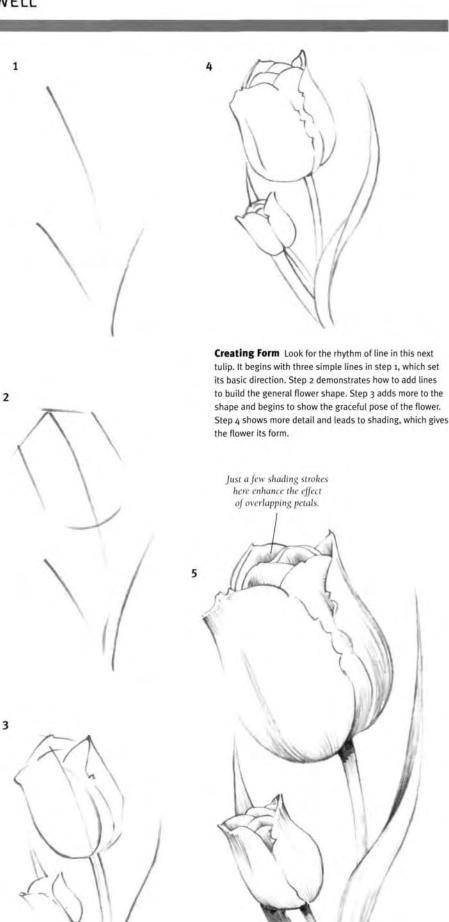

TULIPS BY WILLIAM F. POWELL

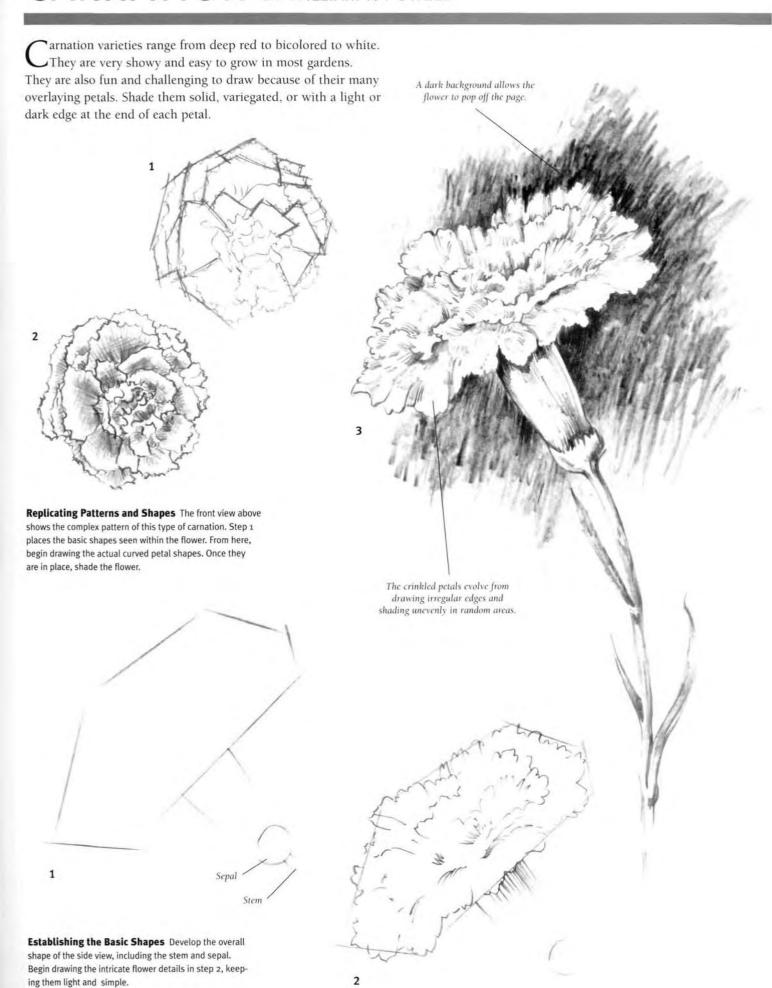

There are several classes of tulips with differently shaped flowers. The one below, known as a parrot tulip, has less of a cup than the tulip to the right and is more complex to draw. Use the layout steps shown here before drawing the details.

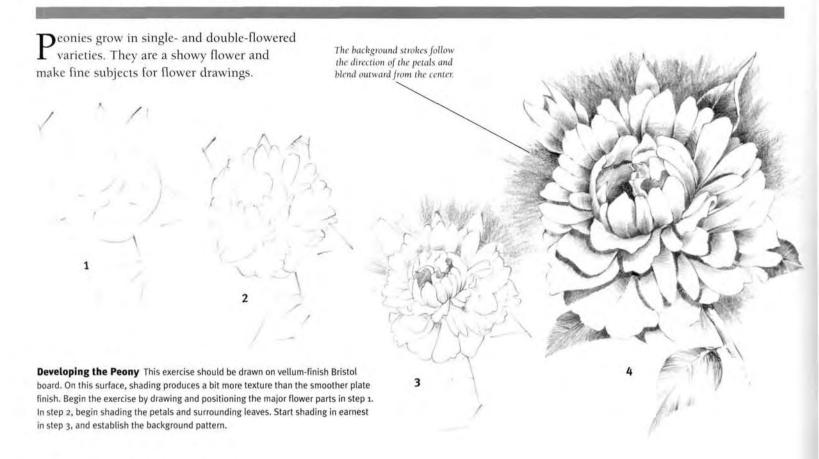

Drawing the Parrot Tulip Begin using straight lines from point to point to capture the major shape of the flower. Add petal angles in step 2. Then draw in actual petal shapes, complete with simple shading.

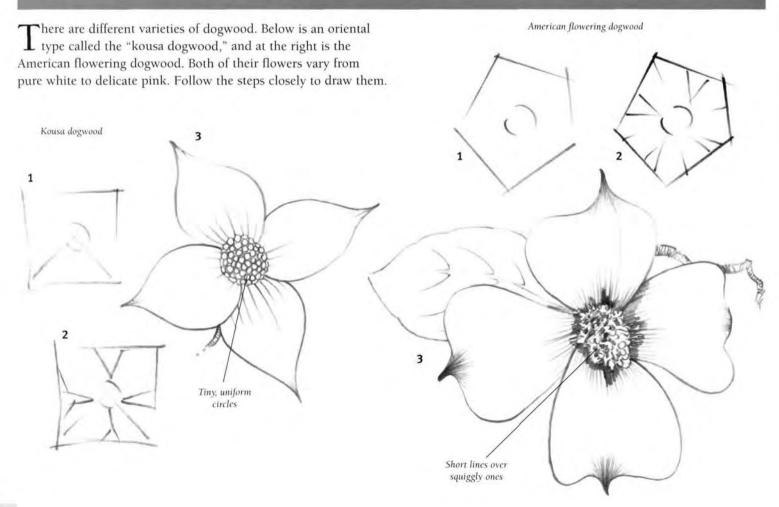

CARNATION BY WILLIAM F. POWELL

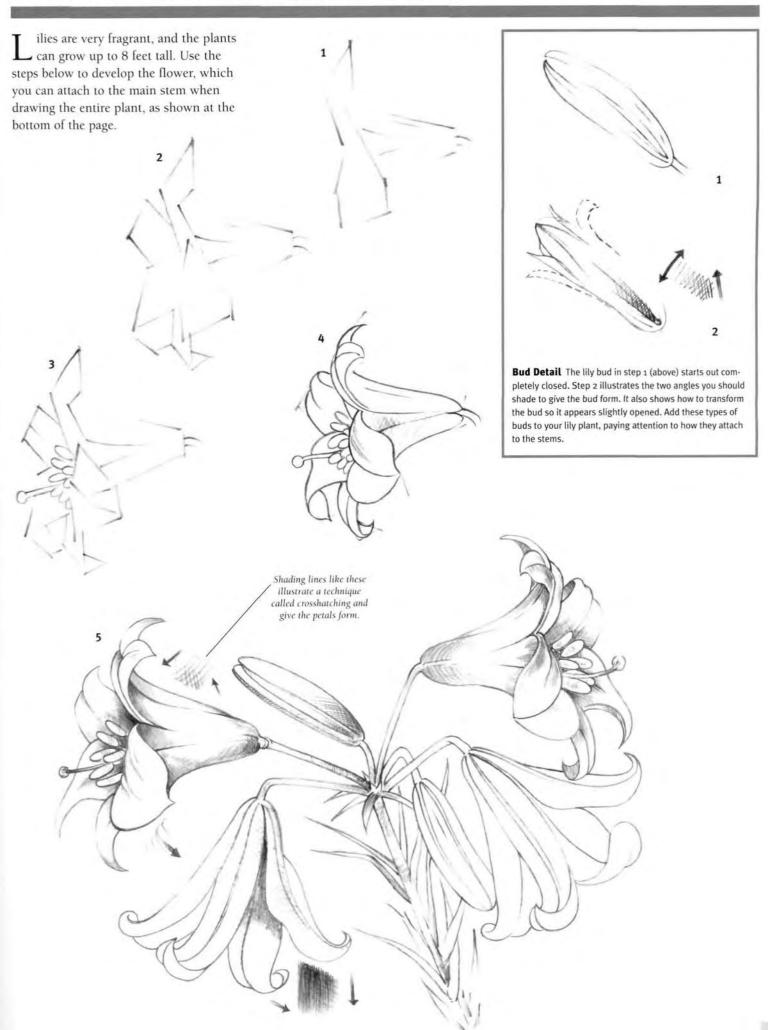

PEONY BY WILLIAM F. POWELL

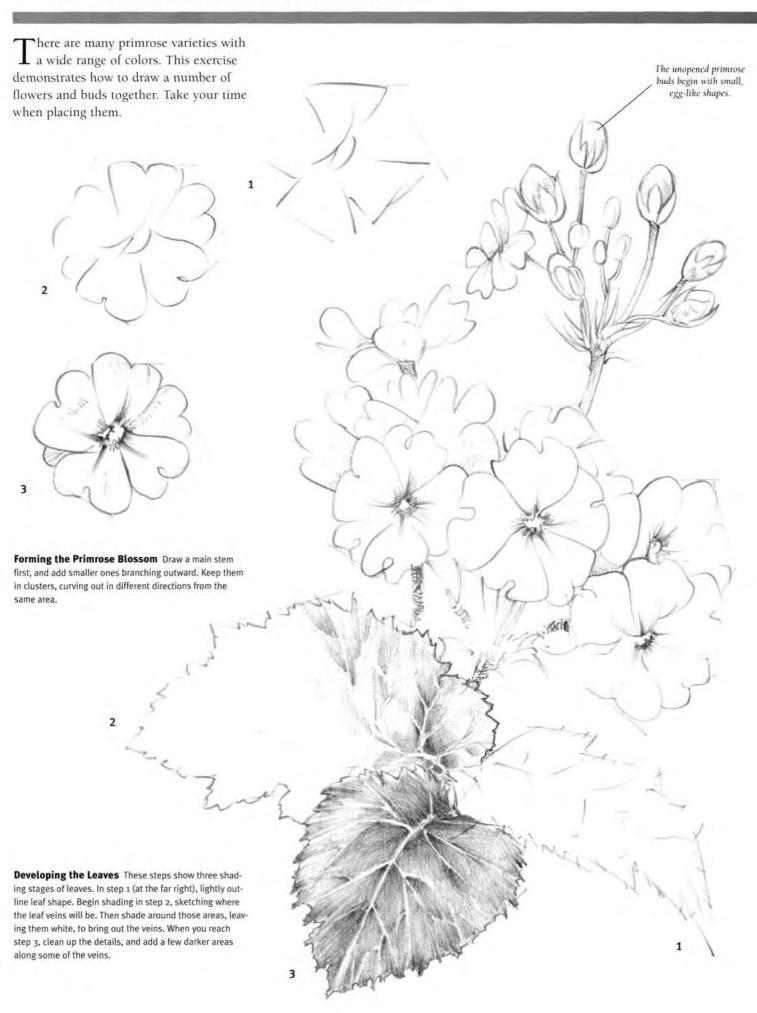

DOGWOOD BY WILLIAM F. POWELL

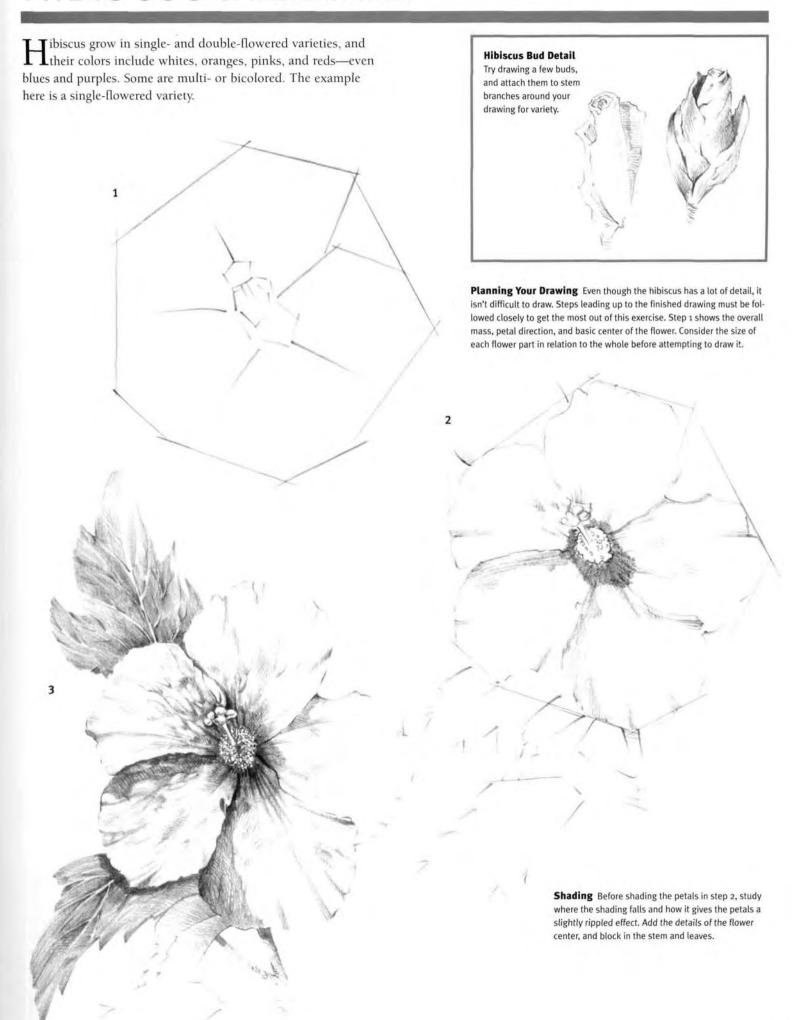

REGAL LILY BY WILLIAM F. POWELL

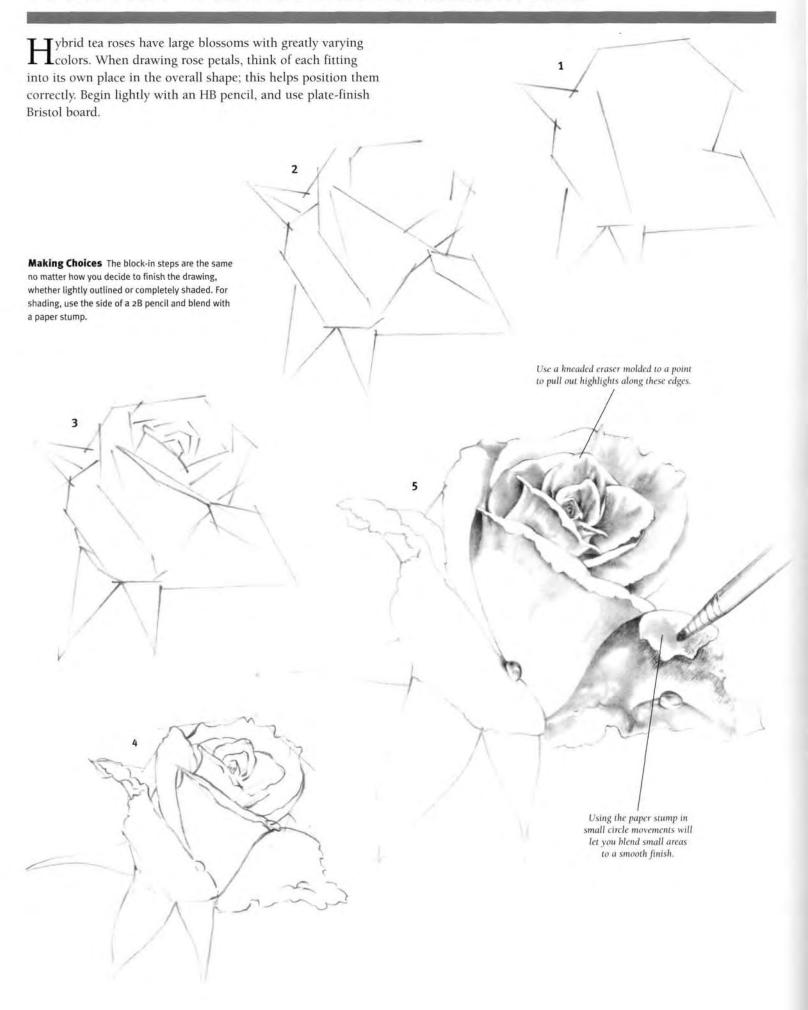

PRIMROSE BY WILLIAM F. POWELL

HIBISCUS BY WILLIAM F. POWELL

HYBRID TEA ROSE BY WILLIAM F. POWELL

FLORIBUNDA ROSE BY WILLIAM F. POWELL

 Γ loribunda roses usually flower more freely than hybrid tea roses and grow in groups of blossoms. The petal arrangement in these roses is involved; but by studying it closely, you'll see an overlapping, swirling pattern.

Outline the overall area of the rose mass in step 1. Once this is done, draw the swirling petal design as shown in steps 2 and 3. Begin fitting the center petals into place in step 4. Use the side of an HB to shade as in step 5, being careful not to cover the water drops. They should

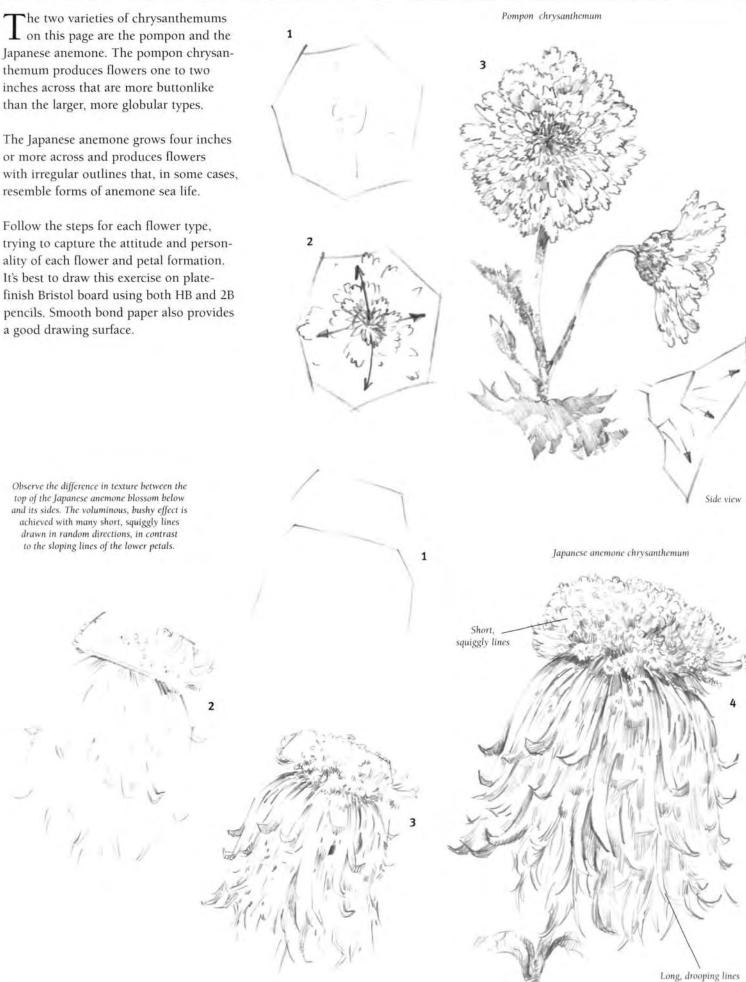

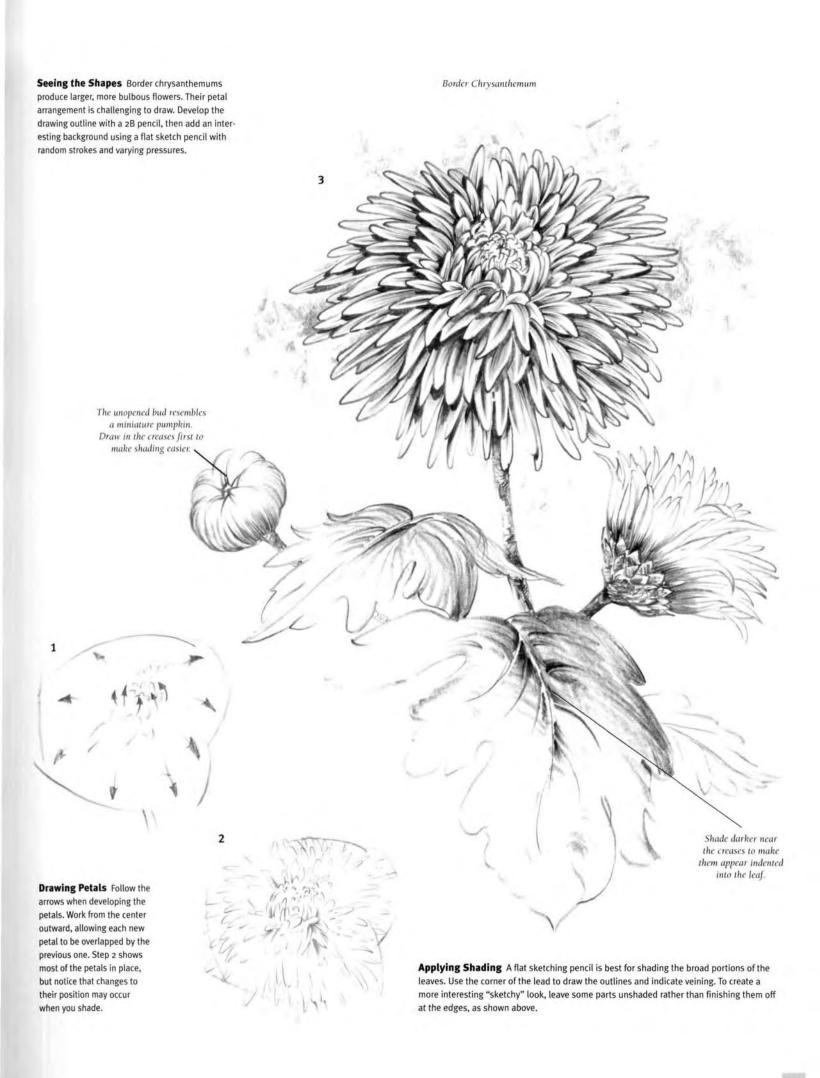

CHRYSANTHEMUMS BY WILLIAM F. POWELL

themum produces flowers one to two inches across that are more buttonlike than the larger, more globular types.

The Japanese anemone grows four inches or more across and produces flowers

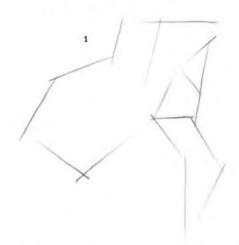

Follow the steps for each flower type, trying to capture the attitude and personality of each flower and petal formation. It's best to draw this exercise on platea good drawing surface.

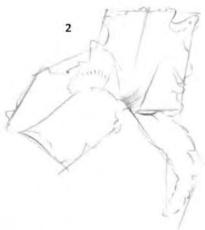

BEARDED IRIS BY WILLIAM F. POWELL

The bearded iris is probably the most beautiful of the iris varieties. Its colors range from deep purples to blues, lavenders, and whites. Some flowers have delicate, lightly colored petals with dark veining. They range in height from less than a foot to over three feet.

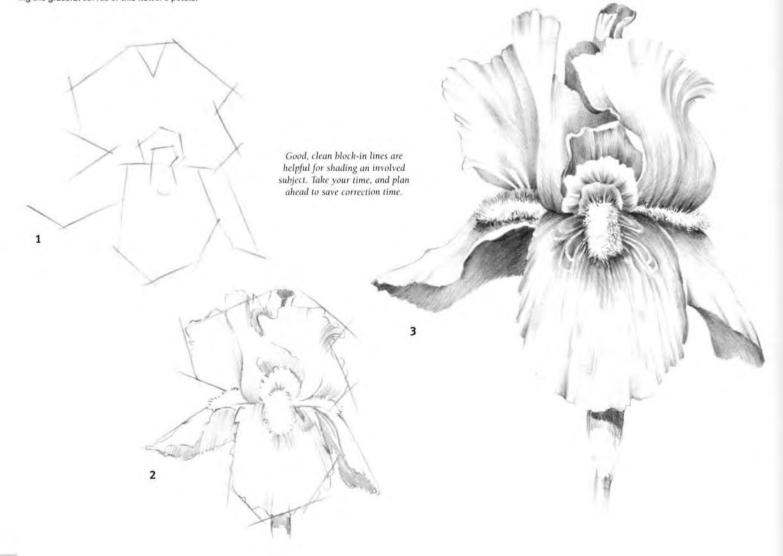

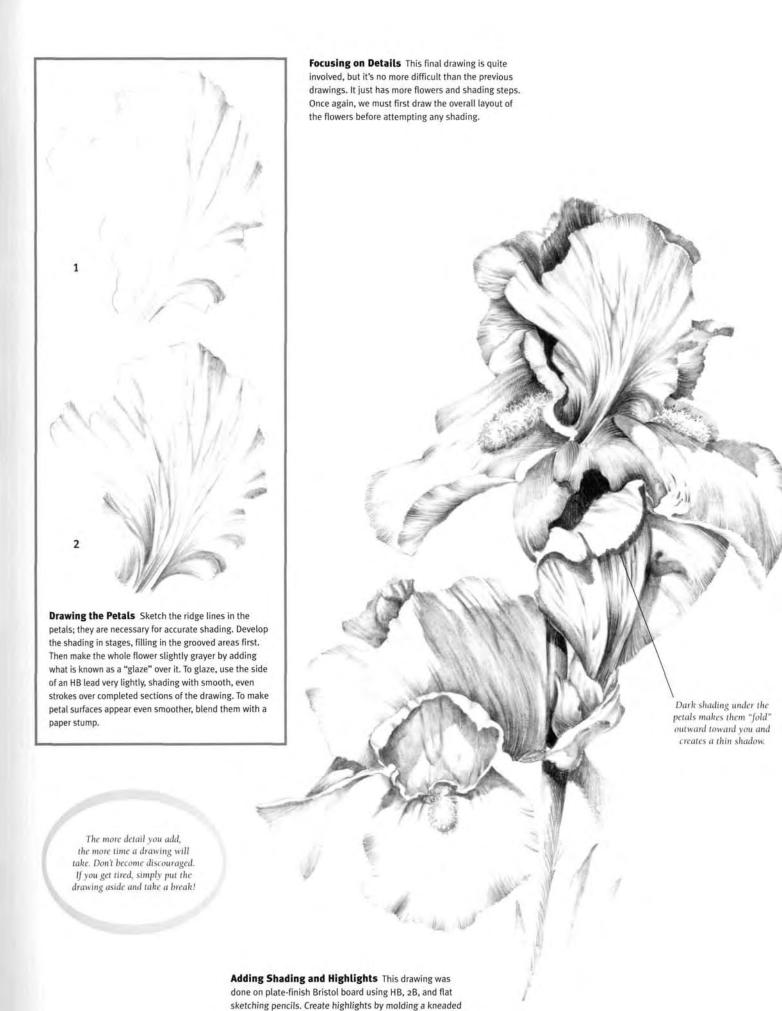

Beginning to Shade Follow the arrow directions in step 3 for blending and shading strokes; these strokes make the petal surfaces appear solid. Darken shadowed areas using the point of a 2B.

Using Guidelines Step 1 (above) shows the block-in lines for a side view of the iris, whereas step 1 (below) shows a frontal view. Whichever you choose to draw, make your initial outline shapes light, and use them as a general guide for drawing the graceful curves of this flower's petals.

eraser into a sharp wedge, "drawing" with it in the same

direction as the shading.

STILL LIFE COMPOSITION BY WILLIAM F. POWELL

Creating a good still life composition is simply arranging the elements of a drawing in such a way that they make an eyepleasing, harmonious scene. It's easy to do once you have a few guidelines to follow. The most important things to keep in mind are: (1) choosing a format that fits the subject, (2) establishing a center of interest and a line of direction that carries the viewer's eye into and around the picture, and (3) creating a sense of depth by overlapping objects, varying the values, and placing elements on different planes. Like everything else, the more you study and practice forming pleasing compositions, the better you'll become.

ARRANGING A STILL LIFE

Composing still lifes is a great experience because you select the lighting, you place the elements where you like, and the objects don't move! Begin by choosing the items to include, and then try different groupings, lighting, and backgrounds. Test out the arrangements in small, quick thumbnails, like the ones shown below. These studies are invaluable for working out the best possible composition.

SELECTING A FORMAT

Horizontal Format The "landscape" format is a traditional one, perfect for drawing indoor or outdoor scenes. Here, as in any good composition, the overlapping vegetables lead the viewer's eye around the picture and toward the focal point—the tureen. Even the tile pattern points the way into the picture and toward the focal point.

Vertical Format In this "portrait" format, the carrot tops add height to the composition and counterbalance the arc of vegetables in the foreground. The tip of the head of garlic and the angle of the beans lead the viewer into the composition and toward the focal point. In the background, only a suggestion of shadows are drawn, and the vertical tiles are not clearly defined. This adds to the upward flow of the entire composition and keeps the viewer's attention focused on the tureen.

Composing with Photos Dynamic compositions rarely "just happen"—most are well planned, with objects specifically selected and arranged in an appealing manner to create good flow and depth. Taking snapshots of your arrangements will help you see how your setups will look when they're drawn on a flat surface.

Step One From your thumbnail sketches, choose a horizontal format. Notice that the tureen is set off-center; if the focal point were dead center, your eye wouldn't be led around the whole drawing, which would make a boring composition. Then lightly block in the basic shapes with mostly loose, circular strokes, using your whole arm to keep the lines free.

Step Two Next refine the shapes of the various elements, still keeping your lines fairly light to avoid creating harsh edges. Then, using the side of an HB pencil, begin indicating the cast shadows, as well as some of the details on the tureen.

Step Three Continue adding details on the tureen and darkening the cast shadows. Then start shading some of the objects to develop their forms. You might want to begin with the bell pepper and the potato, using the point and side of an HB pencil.

Step Four Next build the forms of the other vegetables, using a range of values and shading techniques. To indicate the paper skins of the onion and the garlic, make strokes that curve with their shapes. For the rough texture of the potato, use more random strokes.

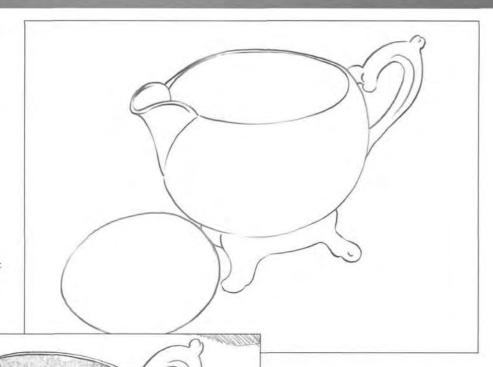

Step Five When you are finished developing the light, middle, and dark values, use a 2B pencil for the darkest areas in the cast shadows (the areas closest to the objects casting the shadows).

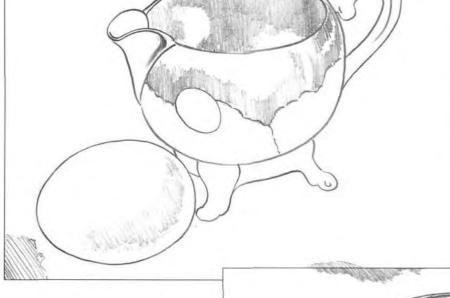

REFLECTIONS AND LACE BY WILLIAM F. POWELL

The shiny surface of a highly polished, silver creamer is perfect for learning to render reflective surfaces. For this exercise, use plate-finish Bristol board, HB and 2B pencils, and a kneaded eraser molded into a point. Begin by lightly drawing in the basic shapes of the egg and creamer.

Step One Begin by lightly blocking in the basic shapes of the egg and the creamer. Don't go on to the next step until you're happy with the shapes and the composition.

Step Two Once the two central items are in place, establish the area for the lace, and add light shading to the table surface. Next position the reflection of the lace and egg on the creamer's surface. Begin lightly shading the inside and outside surfaces of the creamer, keeping in mind that the inside is not as reflective or shiny. Then start lightly shading the eggshell.

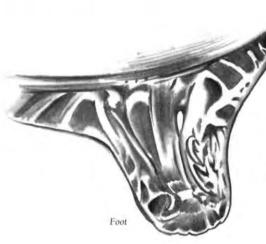

Step Three At this stage, smooth the shading on the egg and creamer with a paper stump. Then study how the holes in the lace change where the lace wrinkles and then settles back into a flat pattern. Begin drawing the lace pattern using one of the methods described on the opposite page.

You might often find objects for your still life drawings in the most unexpected places. Combine objects you believe aren't related, and they might surprise you by creating an appealing still life.

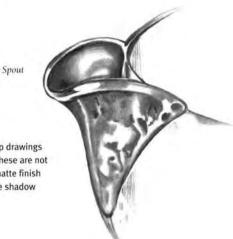

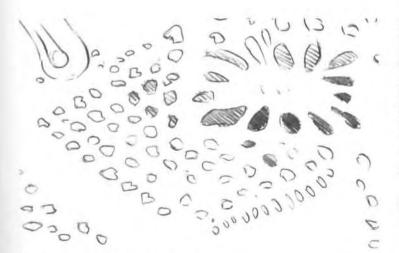

Step Four In the final drawing, pay close attention to the reflected images because they are key to successfully rendering the objects. Interestingly the egg's position in the reflection is completely different than its actual position on the table because in the reflection we see the back side of the egg.

Foot and Spout Details These two close-up drawings show detail on the creamer's spout and feet. These are not as shiny as the rounded bowl. Re-create this matte finish by blending the edges and making the concave shadow patterns darker and sharper.

Lace Pattern Detail The drawings above show two approaches for creating the lace pattern. You can draw guidelines for each hole and then shade inside them (left), or you can lightly shade in the shape of each hole (right). Either way, you are drawing the negative shapes. (See page 13.) Once the pattern is established, shade over the areas where you see

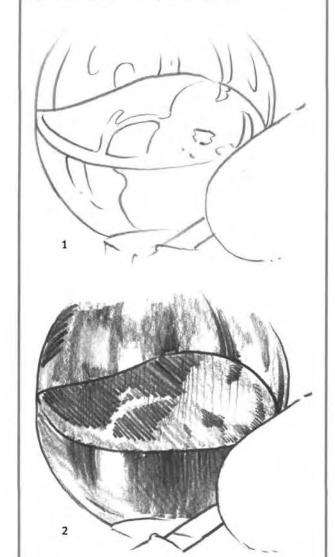

shadows, along with subtle shadows cast within most of the holes. Make the holes in the foreground darker than those receding into the composition, but keep them lighter than the darkest areas on the creamer. After this preliminary shading is completed, add details of dark and light spots on the lace.

BOTTLE AND BREAD BY WILLIAM F. POWELL

This exercise was drawn on vellum-finish Bristol board with an HB pencil. Vellum finish has a bit more "tooth" than the smoother plate finish does, resulting in darker pencil marks.

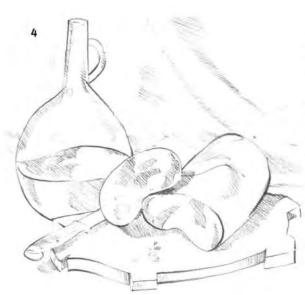

Paying Attention to Detail In the close-up examples below, the guidelines show the distorted wine level, which is caused by the bottle's uneven curves. An artist must make important observations like this in order to create natural, true-to-life drawings.

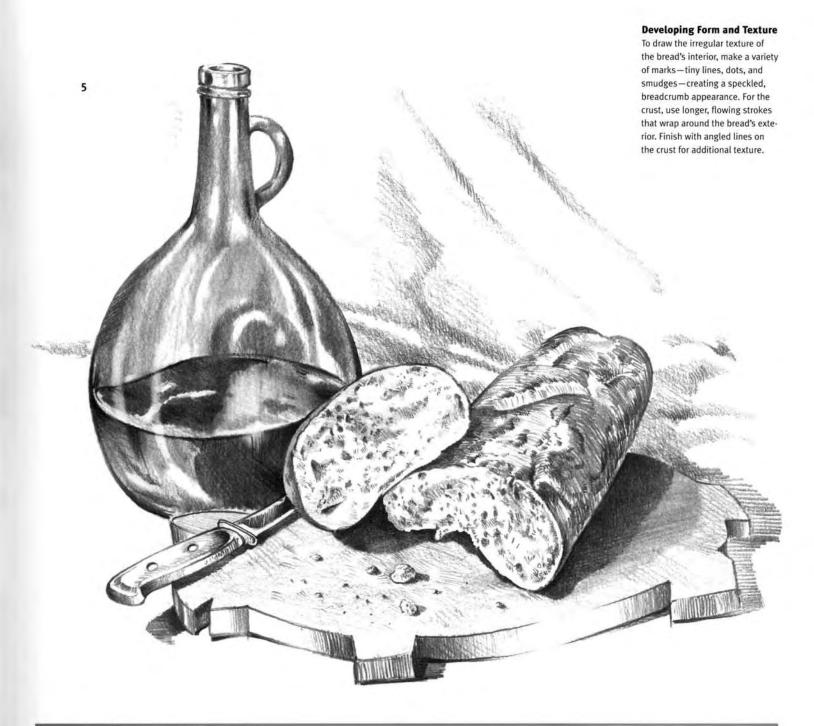

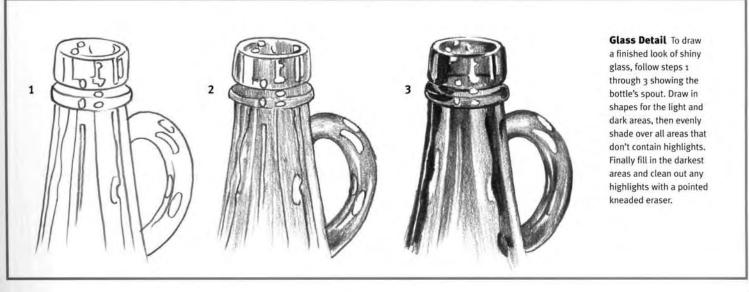

Blocking In the
Composition Begin
lightly sketching the wine
bottle, bread loaf, knife,
and cutting board, roughing in the prominent items
first, then adding the
remaining elements in
step 2. Continue refining
the shapes in step 3, and
then indicate the placement for the backdrop.

Placing Highlights and Shadows Lightly outline where the highlights will be so you don't accidentally fill them in with pencil. Now add shadows with uniform diagonal strokes. Use vertical strokes on the sides of the cutting board.

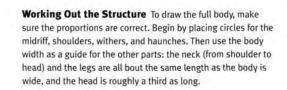

INTRODUCTION TO ANIMALS

The myriad breeds and species of animals that exist throughout the world offer endless possibilities for drawing subjects. Whether it's an adorable puppy, a slithering snake, or a galloping horse, an animal subject provides a wide range of shapes, lines, and textures to challenge and inspire you. And drawing animals isn't difficult at all—just follow the simple, step-by-step instructions in the following lessons. As you learn to draw by starting with basic shapes and progressing through finished renderings, you'll also discover various shading techniques and finishing touches that will bring your animal drawings to life. And with just a little practice, you'll be able to create your own artwork featuring all your favorite animal subjects.

DRAWING ANIMALS BY MICHAEL BUTKUS

Animals are fascinating subjects, and you can spend many hours at the zoo with your sketchpad, studying their movements, their body structures, and their coat textures. (See pages 86–87 for more on drawing animals from life.) And because pencil is such a versatile tool, you can easily sketch a rough-coated goat or finely stroke a smoothhaired deer. Of course, you don't have to go to the zoo to find models; try copying the drawings here, or find a wildlife book for reference, and draw the animals that appeal to you.

Studying the Head When drawing the head, pay special attention to the giraffe's most distinctive features. Emphasize the narrow, tapered muzzle and the heavy-lidded eyes, adding long, curved eyelashes. To make sure the knobbed horns don't look "pasted on," draw them as a continuous line from the forehead, curving back where they attach to the head.

DRAWING FUR AND HAIR

Smooth Coat Shade the undercoat with the side of a blunt 2B and pick out random coat hairs with a sharp HB pencil.

Long Hair Make wavy strokes in the direction the hair grows, lifting the pencil at the end of each stroke.

Rough Coat Using the side of your pencil, shade in several directions. With your pencil, use different strokes and various pressures.

Short Hair Use a blunt HB to make short, overlapping strokes, lifting the pencil at the end to taper the tips.

MAKING YOUR SUBJECT UNIQUE

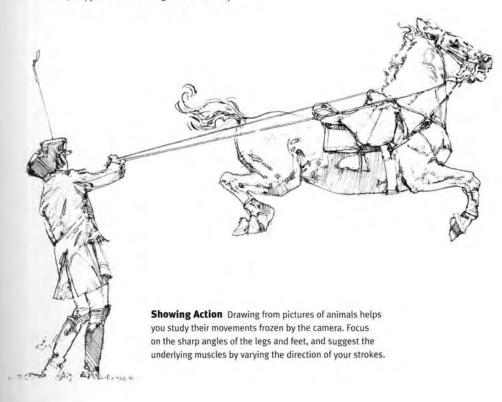

Before you begin drawing any animal subject, ask yourself what it is that makes that animal distinct from all others. For example, sheep, horses, and giraffes all have hooves and a similar body structure, but a bighorn sheep has curled horns and a shaggy coat, a horse has a smooth coat and a single-toe hoof, and a giraffe has an elongated neck and legs and boldly patterned markings. Focusing on these distinguishing characteristics will make your drawings believable and lifelike.

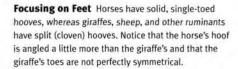

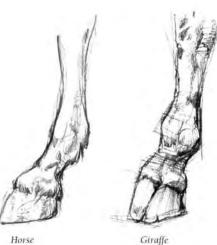

Depicting Hair To show the texture of this bighorn's coat, use the point of a 2B to apply long, wavy strokes on the body. Then draw short, wispy tendrils on the legs and underbelly.

Creating a Portrait To capture this horse's likeness, focus on its features: the large nostril, wide eye, pointed ears, and strong cheekbone all distinguish this horse from, say, the sheep on the left or the giraffe on the opposite page. Use a sharp-pointed pencil for the outline and details, and the flat side of the lead for shadows. Then go back over the shading with the point to accentuate the underlying muscles, leaving large areas of white to suggest a smooth, glossy coat.

Giraffe

DOBERMAN PINSCHER BY MIA TAVONATTI

Doberman Pinschers are known for their sleek, dark coats. When drawing the shiny coat, be sure to always sketch in the direction that the hair grows, as this will give your drawing

a more realistic appearance.

Step One With a sharp HB pencil, block in the boxy shape of the Doberman's head and shoulders with quick, straight lines. Even at this early stage, you want to establish a sense of dimension and form, which you'll build upon as the drawing progresses.

Step Two Using the lines from the previous step as a guide, adjust the outline of the ears, head, and neck to give them a more contoured appearance. Then add the eyes and nose, following the facial guidelines. Finally refine the outline of the muzzle.

Step Three Next erase any guidelines that are no longer needed. Then begin placing light, broken lines made up of short dashes to indicate where the value changes in the coat are. These initial lines will act as a map for later shading.

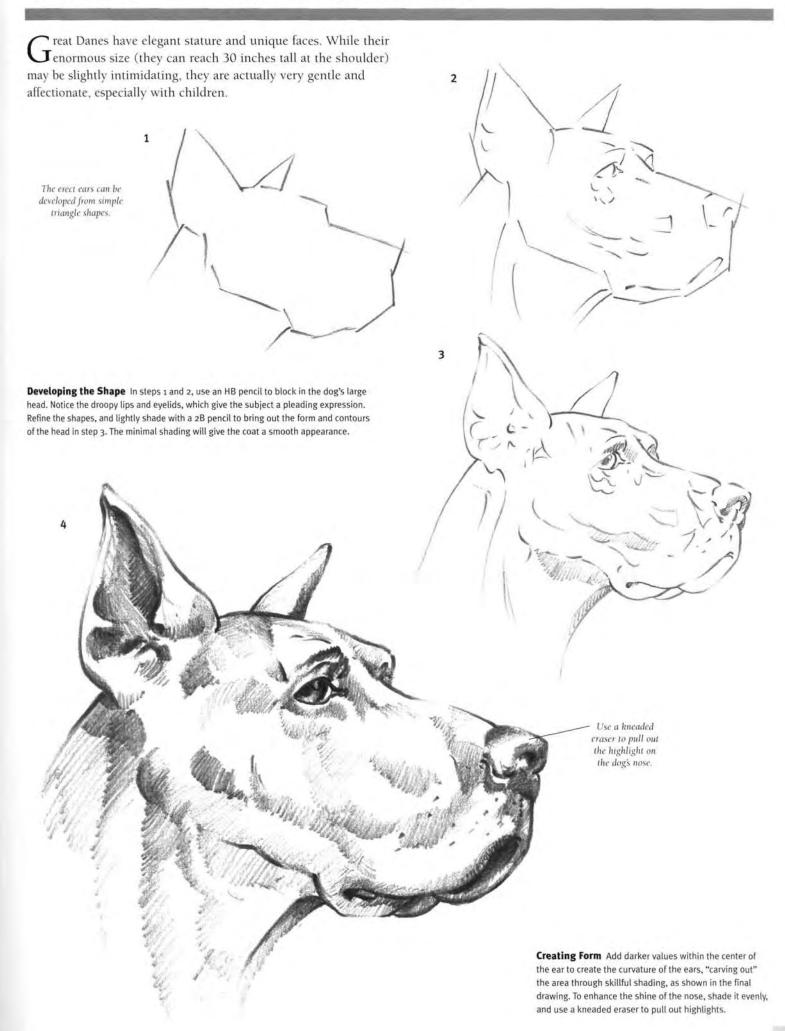

Step Five Now fill in the remaining darks. First create some graphite dust by rubbing a pencil over a sheet of fine sandpaper. Then pick up the graphite dust with a medium-sized blending stump and shade in the dark areas of the dog's fur and nose. To avoid hard edges, blend to create soft gradations where the two values meet.

muzzle.

whiskers at the tip of the

GREAT DANE BY WILLIAM F. POWELL

SIBERIAN HUSKY PUPPY BY MIA TAVONATTI

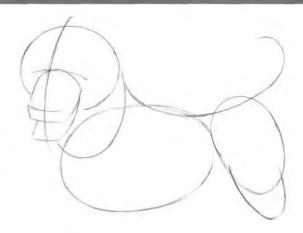

The Husky is an athletic sled dog with a thick coat. It has a deep chest and a bushy tail, evident even at the young age of this little pup.

Step One First suggest the position of the spine and tail with one gently curving gesture line. Then use this line to position the round shape of the head, body, hindquarters. Next draw guidelines for the pup's facial features, at the same time establishing the general shape of the muzzle.

Step Three Once you're satisfied with the pose and the way it has taken shape, begin to develop the puppy's coat. Apply a series of short, parallel strokes that follow the previous outline, producing the appearance of a thick coat. Using the same kind of strokes, outline the color pattern of the coat. Then place the eyes, nose, mouth, and tongue, and refine the paws.

Step Two Now outline the entire torso using smooth, quick lines based on the initial shapes. Place the triangular ears and suggest the upper portion of the four legs.

Step Four Next erase any guidelines you don't need and begin shading the dark areas of the fur with the broad side of the pencil. Use straight strokes that follow the direction of hair growth, radiating from the center of the face and chest. Next shade in the nose and pupils. Then add a background to contrast with the white of the puppy's chest. Apply straight, broad strokes with the side of the pencil, using horizontal hatching lines.

COMPARING THE PUPPY AND THE DOG

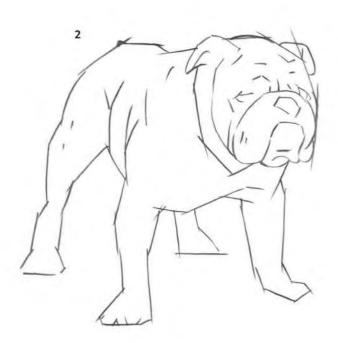

Young puppies and full-sized dogs have the same features but in different proportions. *Proportion* refers to the proper relation of one part to another or to the whole—particularly in terms of size or shape—and it is a key factor in achieving a good likeness. A puppy isn't just a small dog. Although a puppy has all the same parts as its adult counterpart, the puppy's body appears more compact than the dog's—and its paws, ears, and eyes seem much larger in proportion to the rest of its body. In contrast, the adult dog seems longer, leaner, and taller. Its muzzle appears larger in proportion to the rest of its body, and its teeth are noticeably bigger. Keeping these proportional differences in mind and incorporating them in your drawings will help you make your artwork look convincingly realistic.

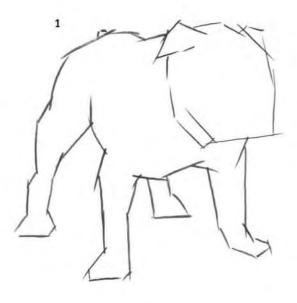

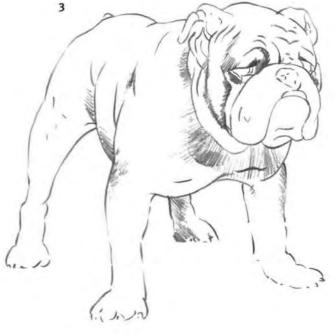

ENGLISH BULLDOG BY WILLIAM F. POWELL

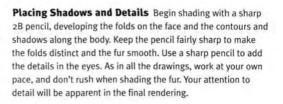

The powerful English Bulldog, with its stocky, muscular body, is a fun, challenging breed to draw. Even though the pronounced underbite of this dog gives it a gruff expression, it is known to be very affectionate and docile.

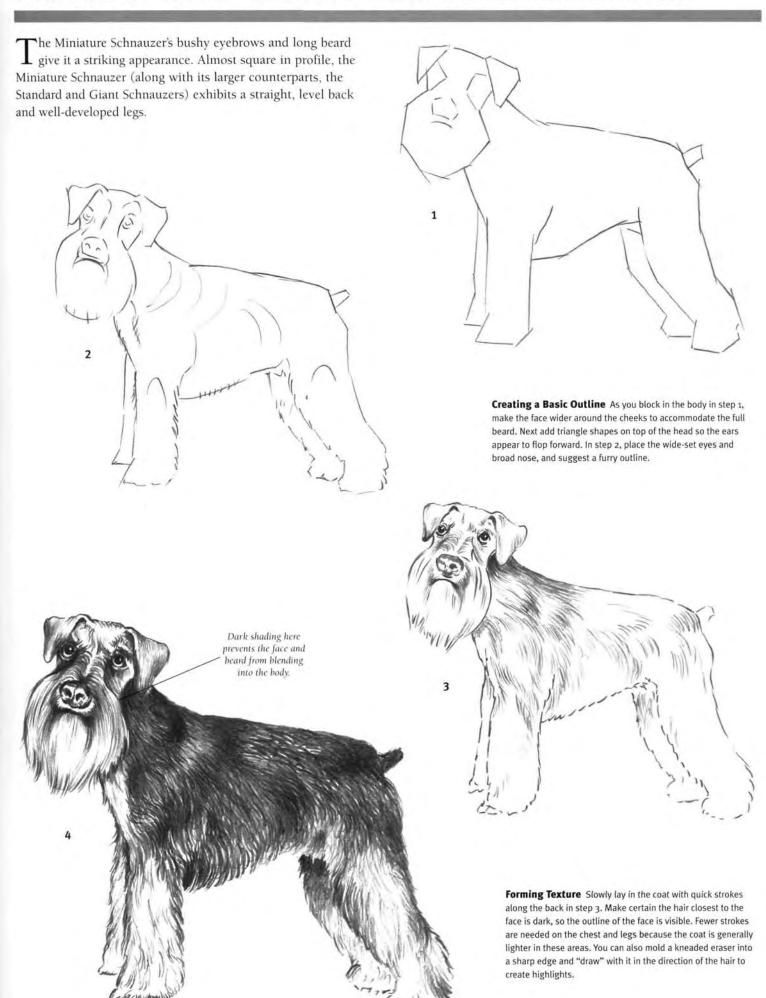

Blocking In In step 1, block in the general outline with short, straight lines. Keep the legs short and bowed to give the dog its compact, stocky appearance. As you sketch the features in step 2, study the low placement of the eyes, as well as how the nose is pushed into the face.

MINIATURE SCHNAUZER BY WILLIAM F. POWELL

SHAR-PEI PUPPY BY WILLIAM F. POWELL

T he Shar-Pei is probably best known for its loose folds of skin. These wrinkles seem to give this breed a worried expression. The puppy shown here has looser skin than an adult; eventually the body will fill out, and the folds will become less obvious.

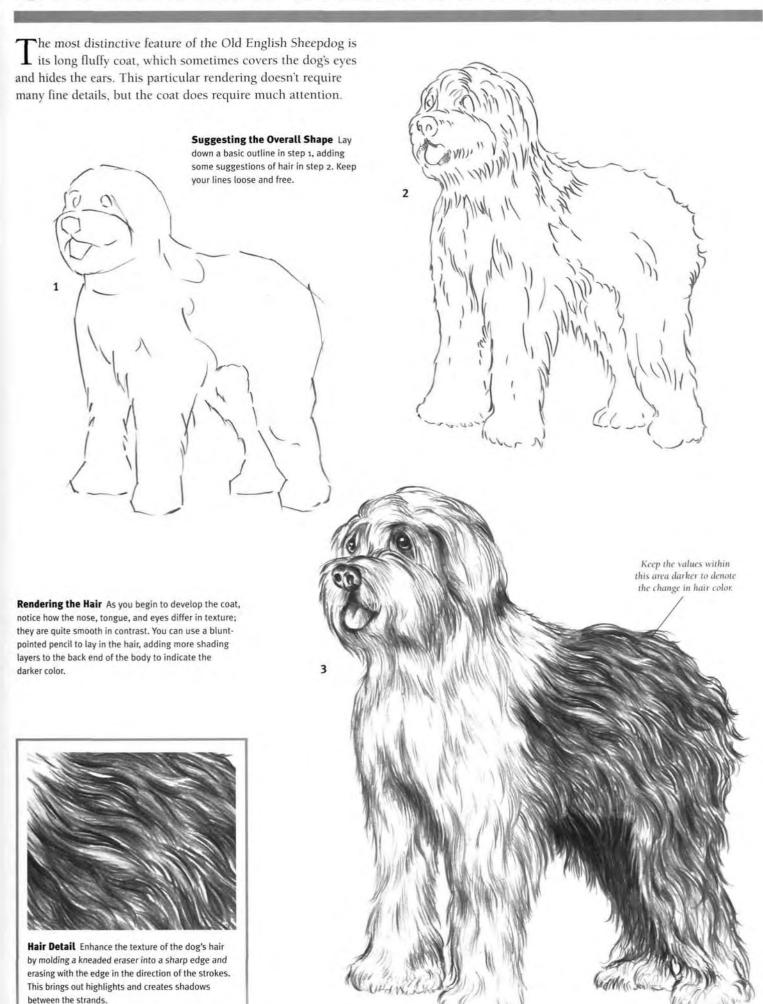

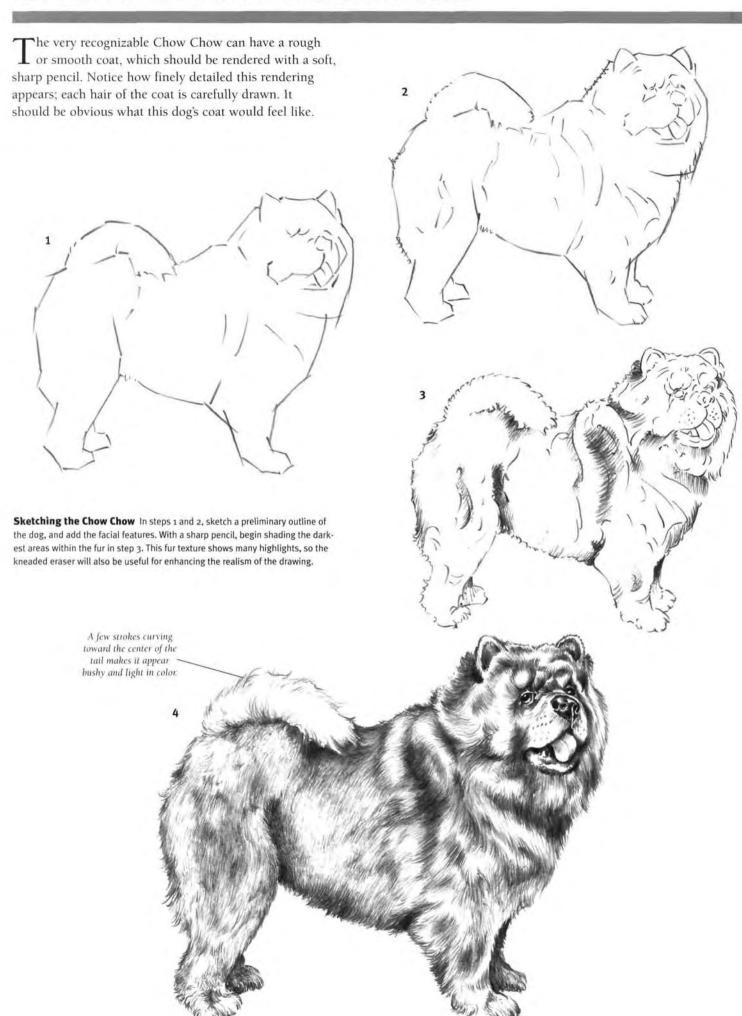

Depicting the Shar-Pei As you block in the dog's shape in step 1, use short strokes placed at wide angles to sketch the outline. To develop the folds in step 2, start by lightly shading inside the creases. Give equal attention to each fold so the dog appears realistic. Continue to develop the shading with short slash marks in step 3, keeping the values darker between the folds.

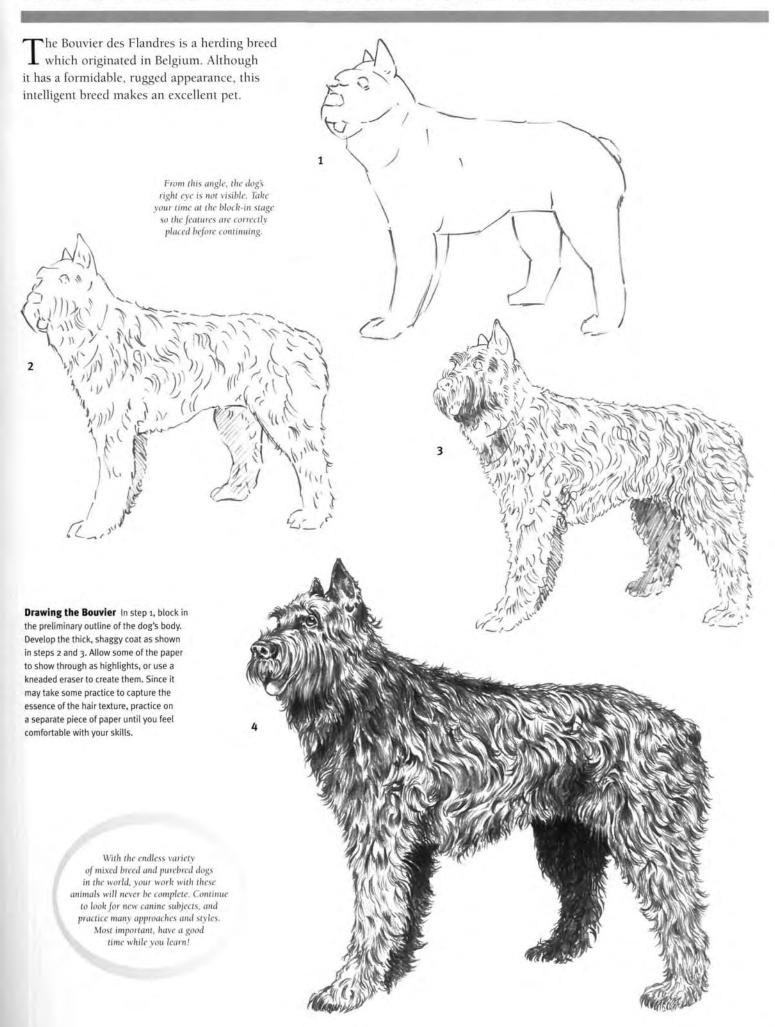

OLD ENGLISH SHEEPDOG BY WILLIAM F. POWELL

CHOW CHOW BY WILLIAM F. POWELL

BOUVIER DES FLANDRES BY WILLIAM F. POWELL

RAGDOLL KITTENS BY MIA TAVONATTI

Ragdolls get their name from their very relaxed nature. To draw these soft, fluffy kittens, use short, quick strokes to suggest the fur. Then use a blending stump to soften some of your marks, creating the smooth appearance of the fur.

Step One Sketch out the balanced, triangular composition of the basket and three kittens. Then build each feline shape with ovals indicating the position of the head, chest, and hindquarters. Next mark a few guidelines for the facial features and suggest the general shape of the legs and paws. Continue to develop the kittens, adding triangular shapes to the ears that follow the tilt of each head. Then sketch the tails of the two cats outside the basket.

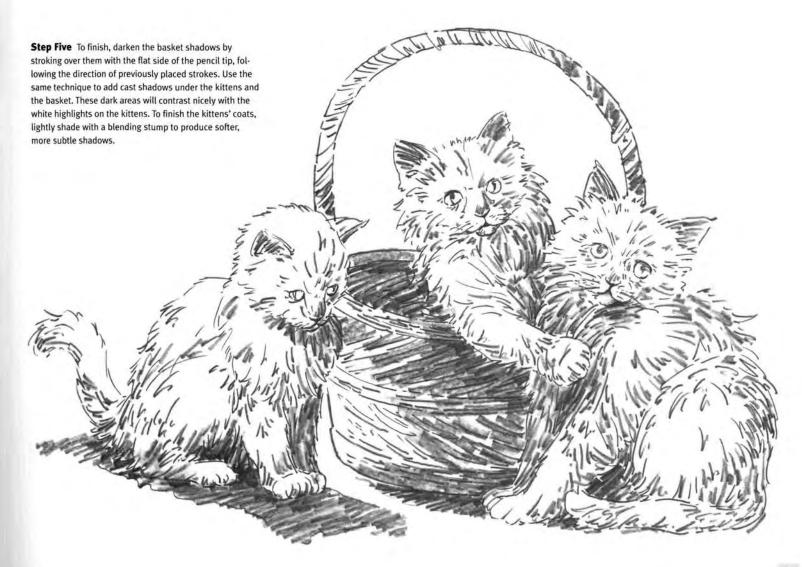

Step Two At this point, erase the initial guidelines and focus on refining the outline of the cats. Add the eyes, nose, and mouth to each kitten and define the individual sections of the paws. Then begin to create the weave pattern of the basket with parallel diagonal strokes.

Step Three Next complete the outline of the kittens, retracing the initial sketch with short, broken marks to suggest fluffy hair. Further develop the texture of the basket, adding more parallel horizontal strokes to define the separate bands. Then add curved strokes to the basket handle, to suggest roundness.

PERSIAN CAT BY MIA TAVONATTI

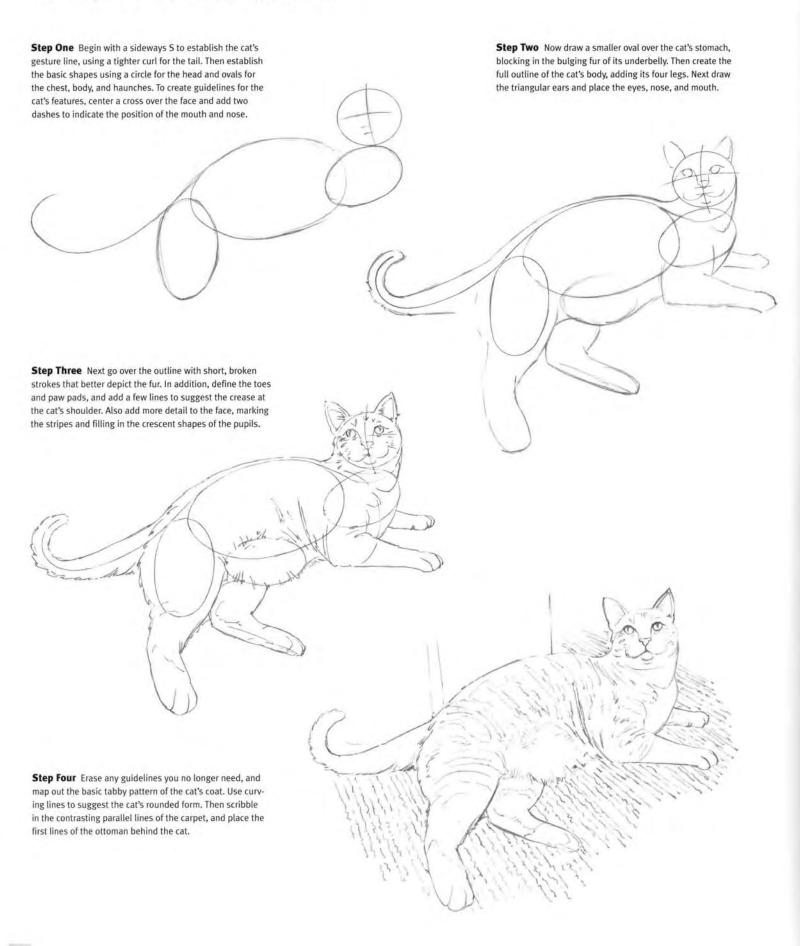

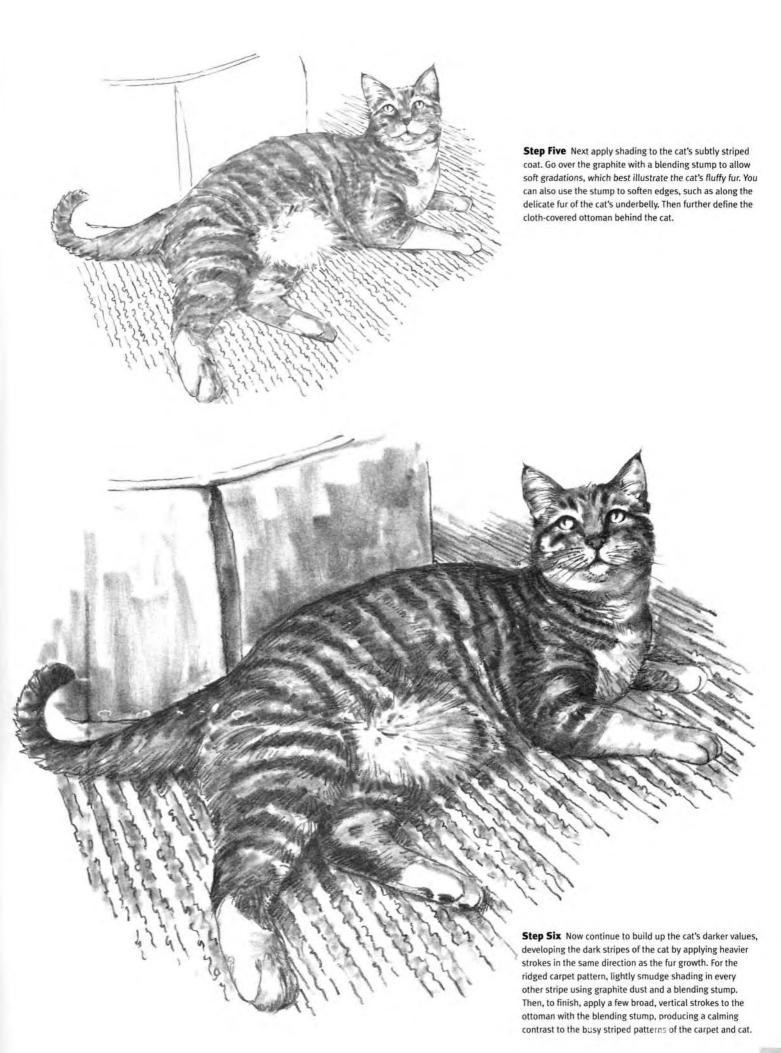

Step Three The final rendering shows an effective use of contrasting values. The minimal shading in the white areas on the cat's chest and side reflect where the light strikes the coat. The middle values are shown in the fur along the left side of the cat's face and on the

cat's left ear. Use a 4B or 6B pencil for darker strokes along the backbone, neck, right side of the face, and parts of the tail. Notice how the dark background is used to create the shape of the light-colored fur on the cat's chest and tail.

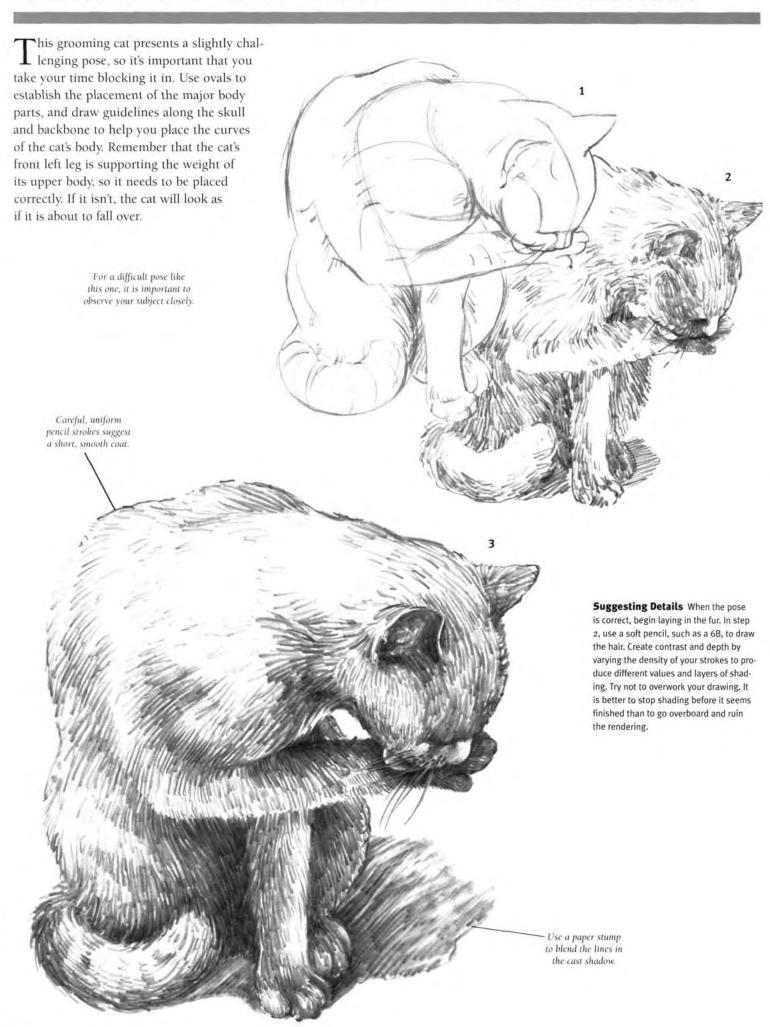

TABBY CAT BY MIA TAVONATTI

 ${f P}$ atterns and textures can add interest to an otherwise ordinary subject. For this sketch, the pairing of a ridged carpet and striped cat produces an eye-catching study in contrasts.

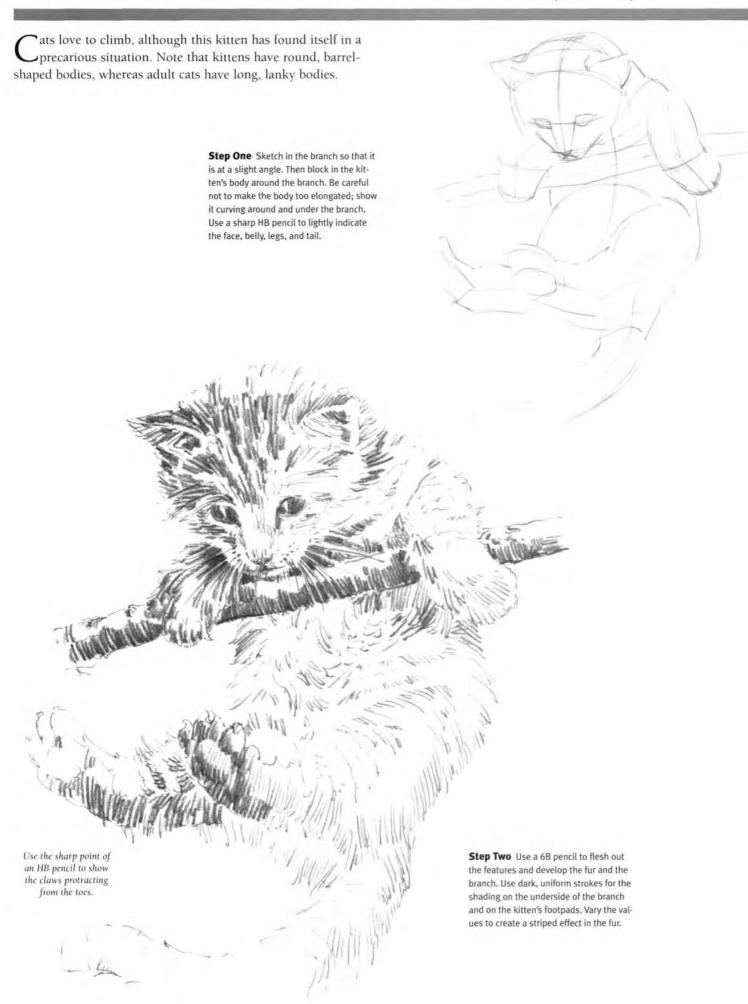

COMMON CAT BEHAVIORS BY MIA TAVONATTI

COMMON CAT BEHAVIORS (CONT.)

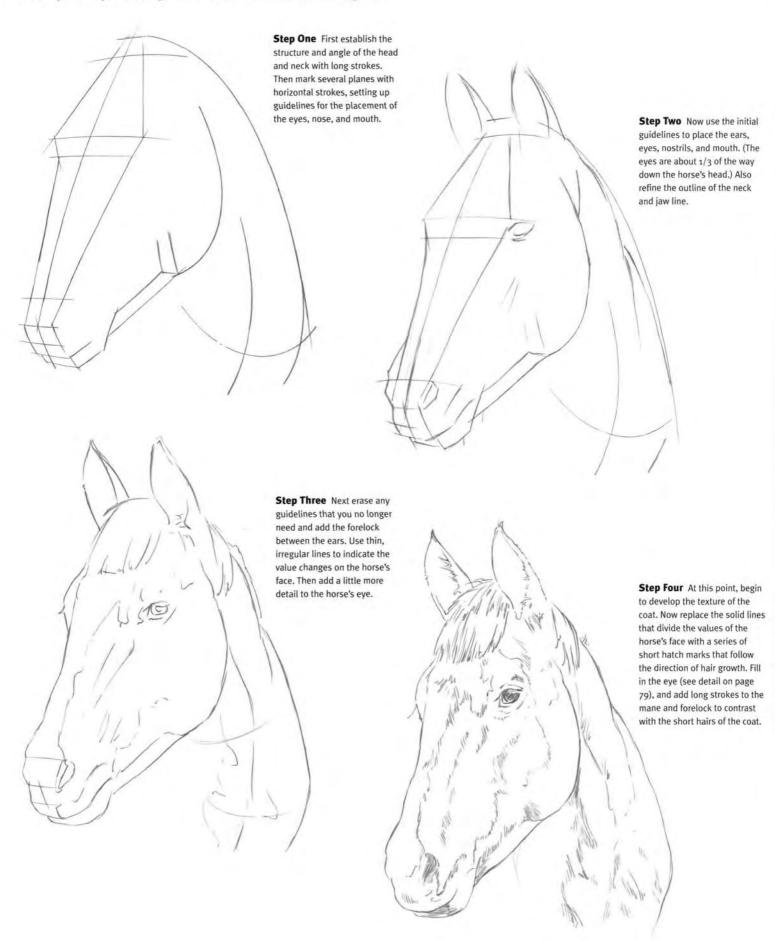

Step Three Now develop the rendering to your satisfaction. Use an HB pencil for the whiskers over the eyes and the fine lines around the nose, eyes, and mouth. Continue creating the texture of the kitten's coat by making deliberate strokes of different lengths in the varying directions of fur growth. Remember to leave uniform areas of white to suggest this tabby's stripes.

HORSE PORTRAIT BY MIA TAVONATTI

Horses are fantastic drawing subjects, as their inherent beauty and grace can be quite captivating. Pay careful attention to the detail of the eye to express this gentle creature's warmth and intelligence.

HORSE DETAILS

Muzzle The muzzle has subtle, curved forms, which are defined with careful shading. The area around the nostril is raised, as is the area just above the mouth; indicate this shape by pulling out highlights with a kneaded eraser.

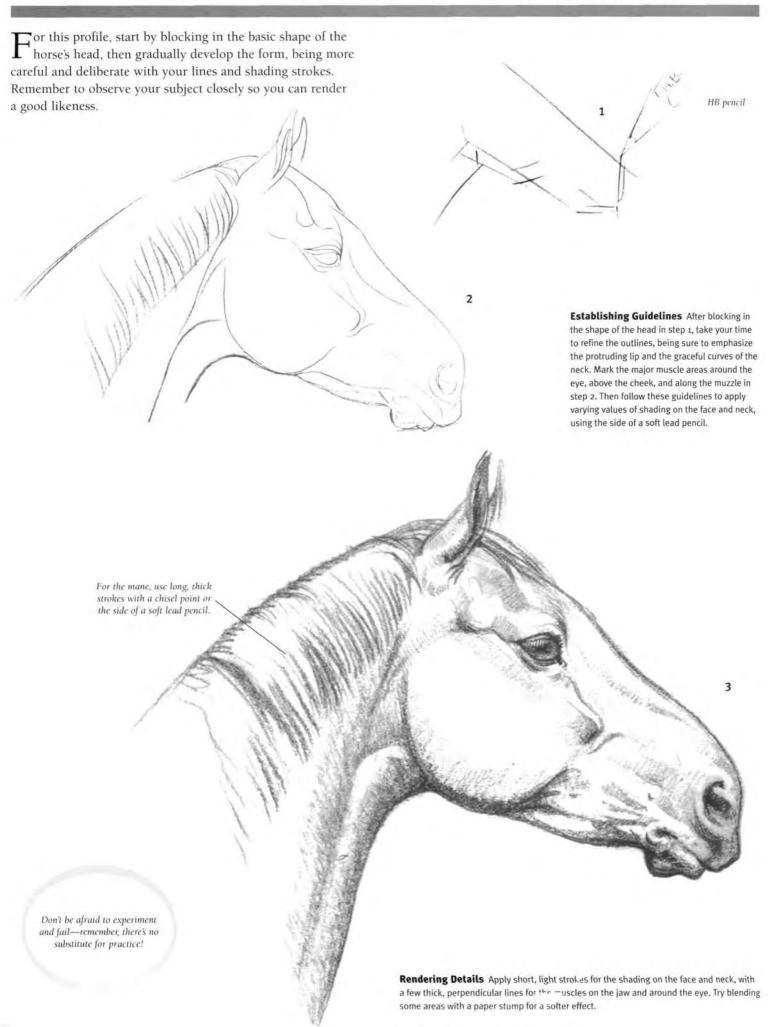

Eye Horses' eyes have a lot of detail, from the creases around the eyes to the straight, thick eyelashes that protect them. To create a sense of life in the eye, leave a light crescent-shaped area to show reflected light, and leave a stark white highlight above it.

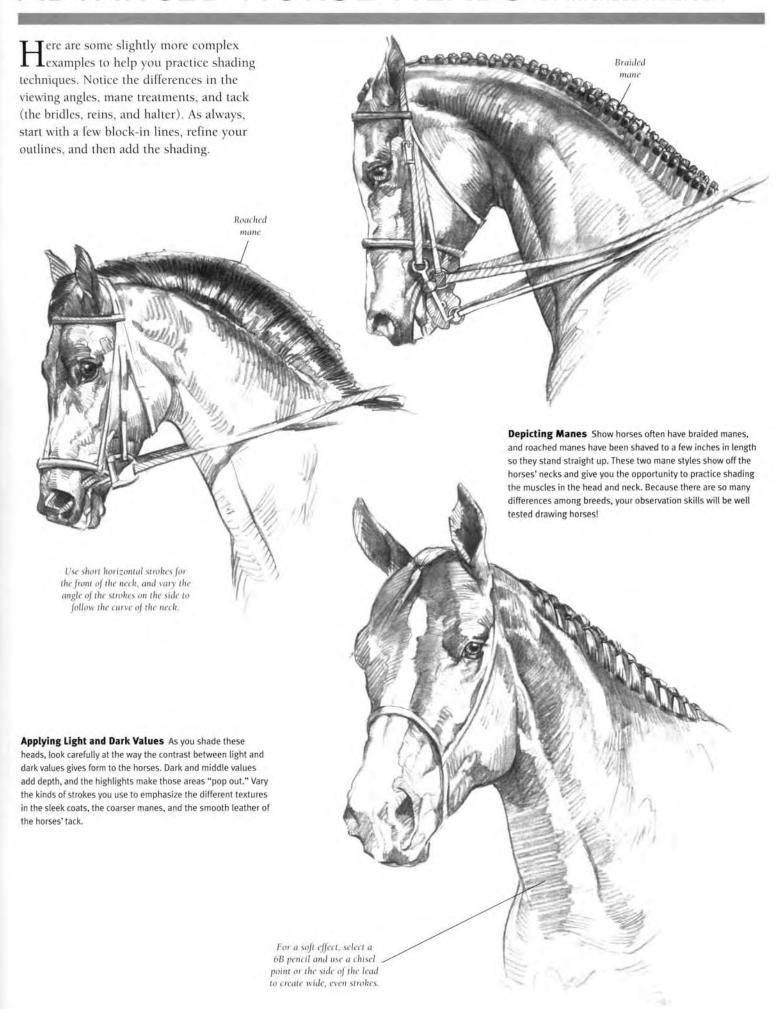

Ears Render the horse's forelock hair with long, slightly curving strokes. Then shade the interior of the ear with upward, parallel strokes, making them darkest at the bottom and gradually lighter as you move up the ear.

HORSE HEAD IN PROFILE BY WALTER T. FOSTER

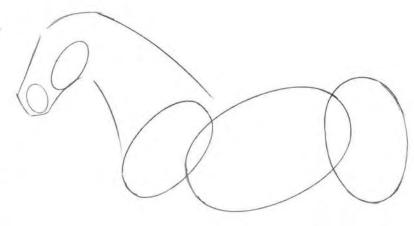

ADVANCED HORSE HEADS BY MICHELE MALTSEFF

PONY BY MIA TAVONATTI

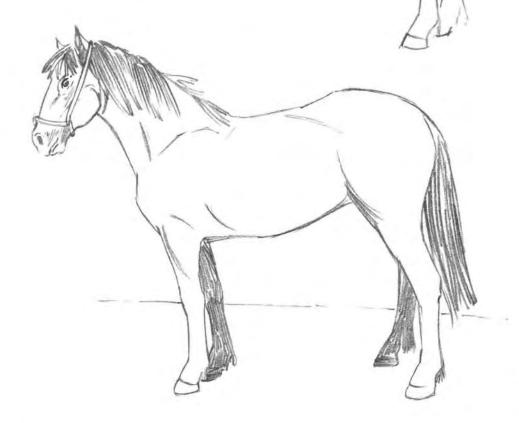

Ponies are not just small horses; they are a distinct species. Smaller in size than horses, ponies are also more sure-footed and have a stronger sense of self-preservation.

Step One With an HB pencil, sketch the bulk of the pony onto your paper. Use overlapping ovals for the chest, body, and haunches. Then place the gentle curves of the neck, blocking in the head with short, angular strokes. Add ovals to block in the curvature of the jaw and muzzle.

Step Two Building on the lines from step 1, outline the entire pony. Block in the legs, carefully sketching the hooves and joints. Quickly suggest the mane and tail with a few long strokes, and place the mouth,

nostril, eye, and ears.

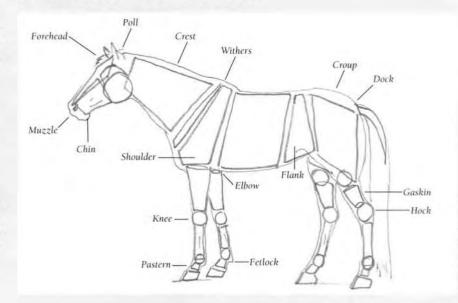

Step Three Now erase the initial oval guides and shade the outside legs with long, vertical strokes. Then create the texture of the mane and tail with long, straight strokes to represent strands of hair. To give the body form, add a few marks to suggest the major muscles. You can give the face form with a few areas of light, solid shading. Then outline the halter.

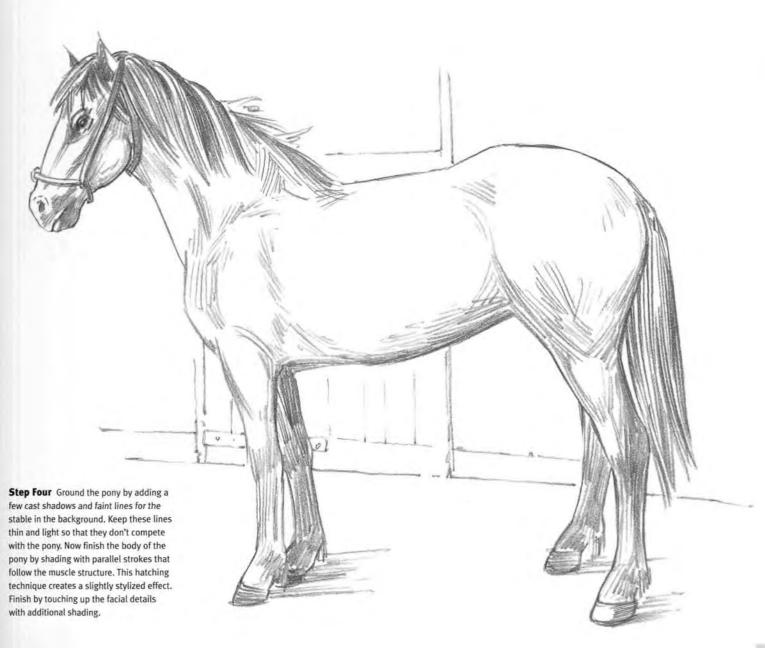

PARTS OF HORSES AND PONIES

You certainly don't need to learn the names of every bone and muscle in order to draw an animal accurately. But it is helpful to have a little knowledge of the basic anatomy of your subject. For example, an understanding of the underlying shapes of the horse's skeletal and musculature structures will result in more realistic depictions of the horse's form. (Ponies have the same basic structure as horses, although sizes and proportions differ.) Knowing the shapes of the bones will help you draw lifelike legs, hooves, and faces. And familiarity with the major muscle groups will help you place your shadows and highlights accurately, bringing the horse or pony's form to life.

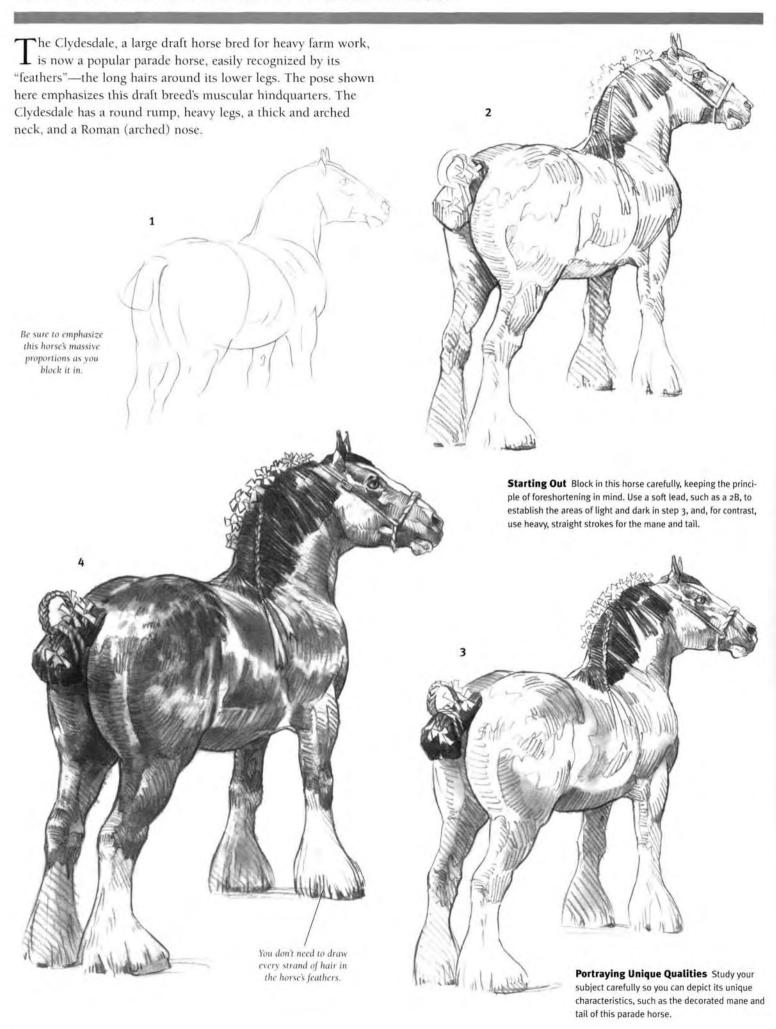

Drawing the horse's body is easy if you break down the animal into basic shapes. Start with circles, cylinders, and trapezoids—as shown on the horse at right—to help you get a good general sense of the size and proportion of the parts of the horse, such as the head, neck, belly, and legs. Then simply connect these shapes, refine the lines, and add a few details to produce a realistic outline of your equine subject.

CLYDESDALE BY MICHELE MALTSEFF

CIRCUS HORSE BY MICHELE MALTSEFF

DRAWING AT THE ZOO BY WILLIAM F. POWELL

When going to the zoo, you can observe all the different animals and draw them in a variety of poses. This is another great way to practice seeing the important shapes and to train your hand to draw them quickly! Make several rough sketches of an animal—plus a few with some detail whenever you get the chance. You can also write comments in the margins of your sketchbook—noting the animal's expressions, mannerisms, patterns, fur textures, and colors—so that you can refer to them later, when you're back in your work space.

DRAWING FROM LIFE

When working outside (also called "on location"), it often pays to keep your art materials to a minimum so that they're easily transportable. When going to the zoo, try taking only a small sketchbook, a few HB pencils, and a sharpening implement. You might include an eraser if you plan to make rendered drawings. Another thing to consider is the weather: Heat and glare can make drawing uncomfortable, so you may also want to take a hat, water, and even bug repellent, if necessary.

Observing Animals One of the joys of sketching live birds and animals is the spontaneous and natural actions you are privy to. If you find a large pelican like this one drying its wings in the sun, for example, you'll have a little more time to draw, so you might be able to add the details and some shading on the body, head, and wings.

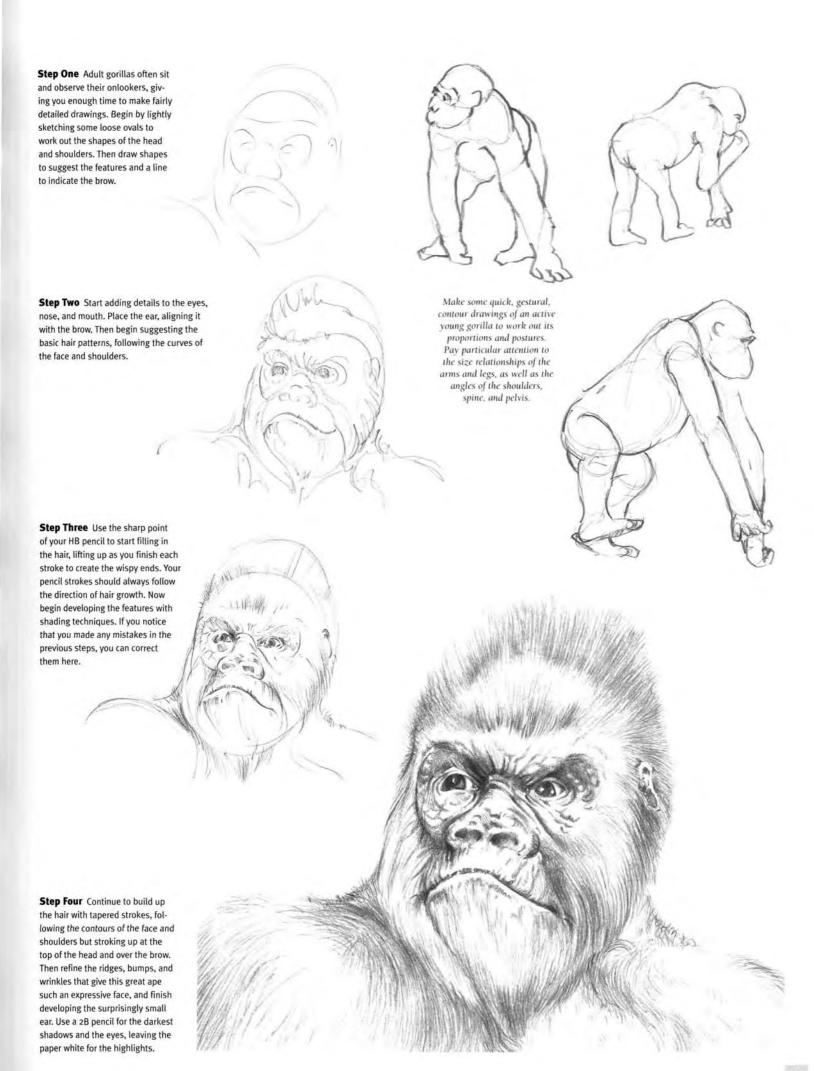

Sketching Quickly The zoo is a wonderful place to sketch birds, although most don't stand still for very long. Quickly sketched the general pose of each crane and then add more detail on the head of the grooming crane. Sometimes it's good to bring my camera along to record details for future drawings. And if you can't get close enough to the animal to see clearly, use your camera lens as "binoculars" and zoom in!

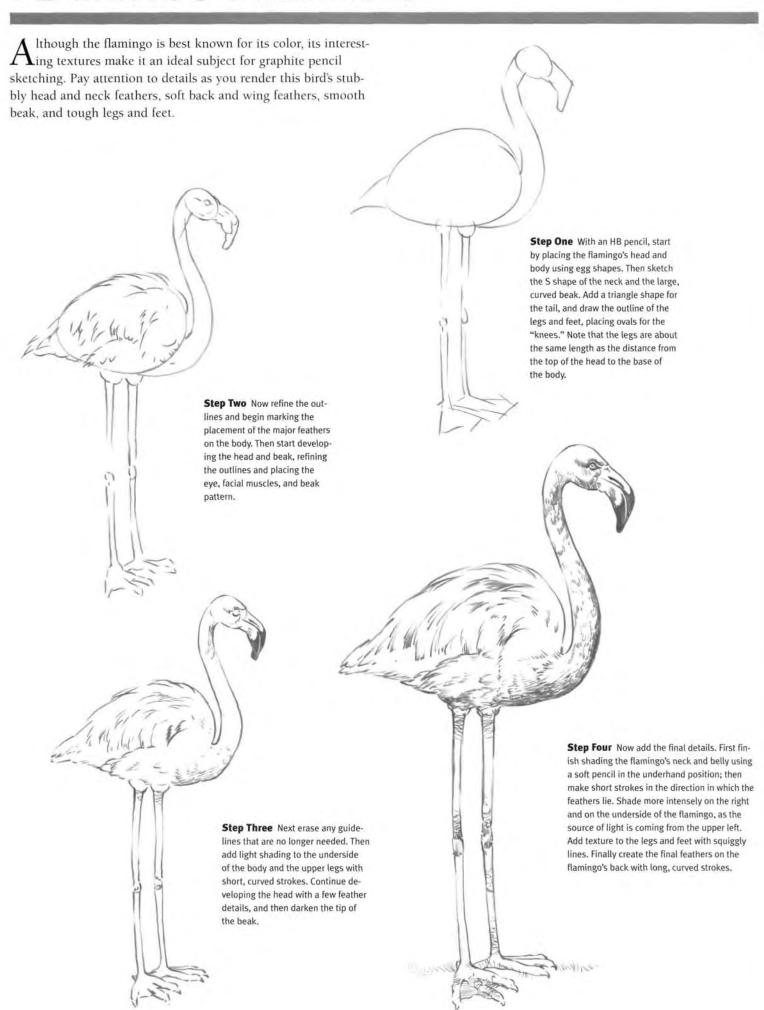

Taking "Notes" When catching sight of magnificent animals like these, make a quick sketch and take some photos on site. Then develop your final drawing back at your work space, using your sketches and photos for reference.

FLAMINGO BY WILLIAM F. POWELL

ELEPHANT BY WILLIAM F. POWELL

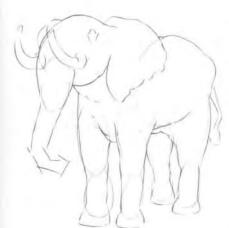

T his elephant makes a simple subject because even its details are larger than average! Use simple shading to indicate its ridged tusk, wrinkled body, smooth tusks, and bent tail.

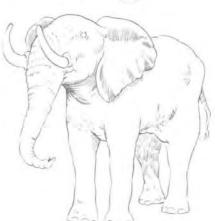

Step One Begin drawing the elephant with large overlapping circles and ovals to place the elephant's head and establish the general bulk of the body.

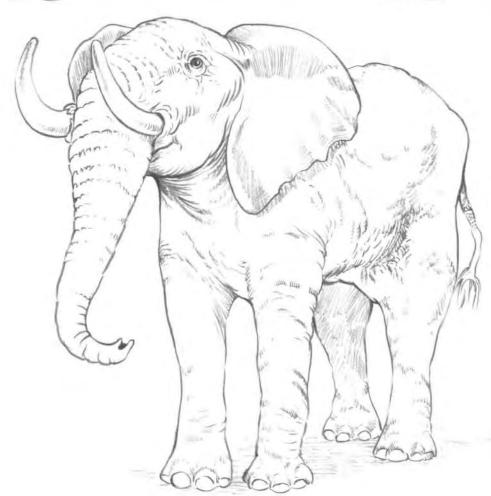

Step Two Next draw thin, vertical ovals to indicate the legs and the widest part of the trunk. Then draw the curved shapes of the tusks on either side of the base of the trunk.

Step Three Now, using the basic shapes as a guide, draw the outline of the elephant's body, ears, head, and legs as shown. Then sketch the shape of the trunk and the general outline of the tail.

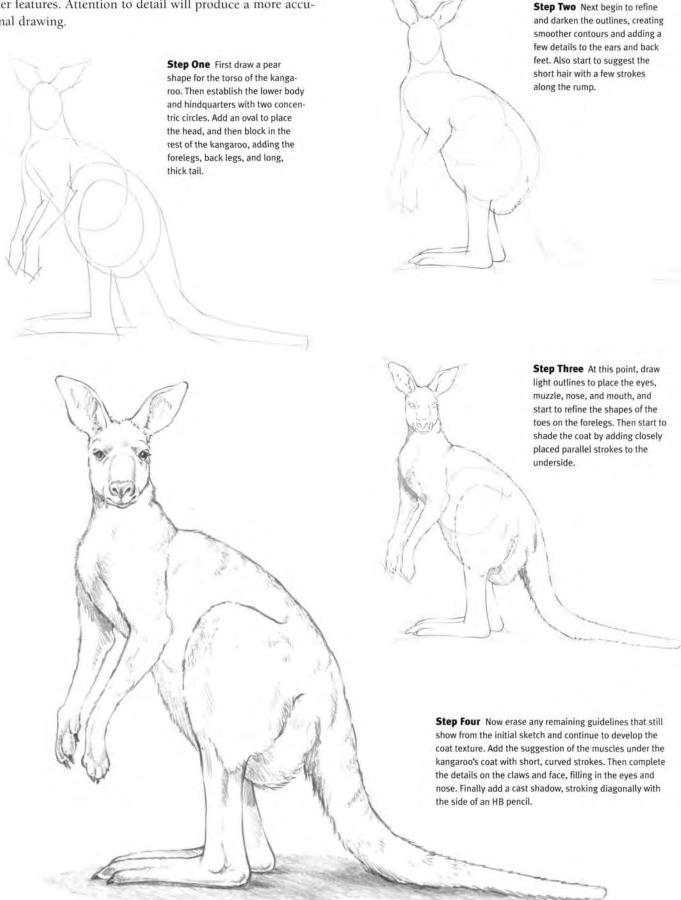

Step Four Now refine the outlines and erase any guidelines that remain. Then apply shading to the neck, ears, tail, and legs, reserving the darkest applications for the final step. Use short strokes to suggest the wrinkles on the trunk and some folds of skin on the body.

Step Five Using a 2B pencil, reinforce the darkest shadows, such as on the tail and beneath the head. Then fill in the detail of the eye, leaving a small spot unshaded for the highlight. Finally finish developing the shading and texture of the elephant, and then add a light cast shadow around the feet to anchor the elephant to the ground.

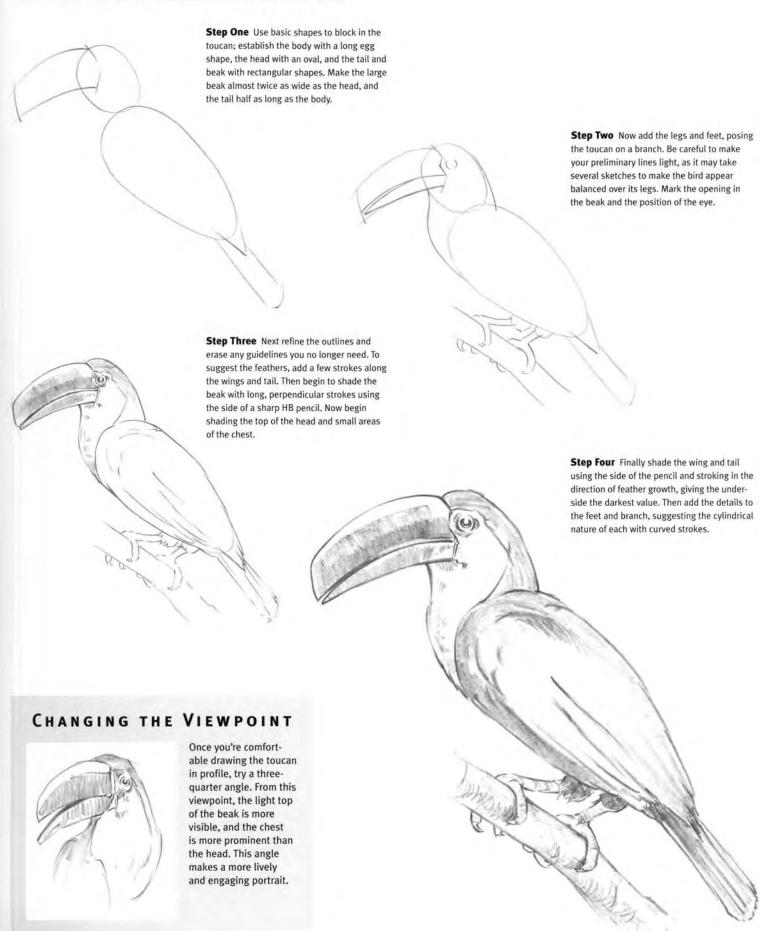

KANGAROO BY WILLIAM F. POWELL

With the kangaroo, it's especially important to draw what you see, not what you expect to see. Study the features of the animal for beginning. For example, notice that the kangaroo's ears, tail, and feet are disproportionately large in comparison to its other features. Attention to detail will produce a more accurate final drawing.

TOUCAN BY WILLIAM F. POWELL

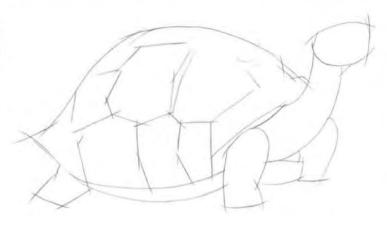

Birds come in all shapes, sizes, and textures. This toucan's long, smooth feathers require long, soft strokes. Soft shading is also used to indicate the smooth texture of this bird's beak.

TORTOISE BY WILLIAM F. POWELL

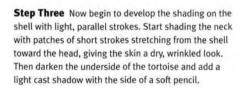

The hard shell of the tortoise produces an interesting shading challenge—you must develop the rounded form by focusing on the highlights and shadows of your subject. As you draw, pay careful attention to the variations in the size and intensity of the shadows.

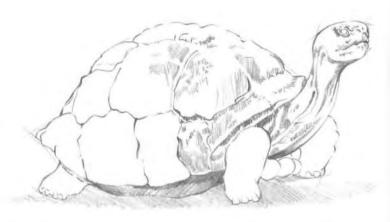

Step One First sketch the roughly oval shape of the tortoise shell and body with an HB pencil. Then draw an egg shape for the head and sketch in the curved neck and stocky legs. Now add rough lines to indicate the general pattern of the shell.

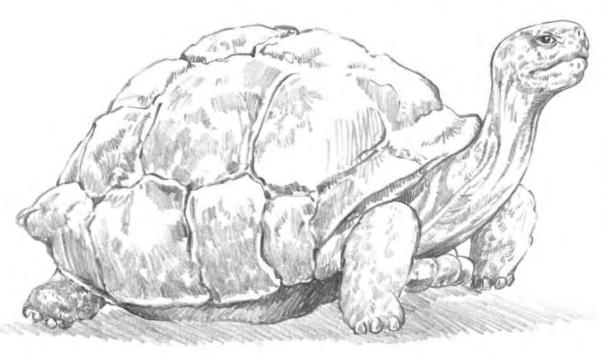

Step Two Next refine the outlines, giving the shell a bumpy perimeter and smoothing the lines of the legs, head, and neck. Then mark the positions of the eye, mouth, and toes and sketch the round segments on the shell just beneath the tortoise's neck.

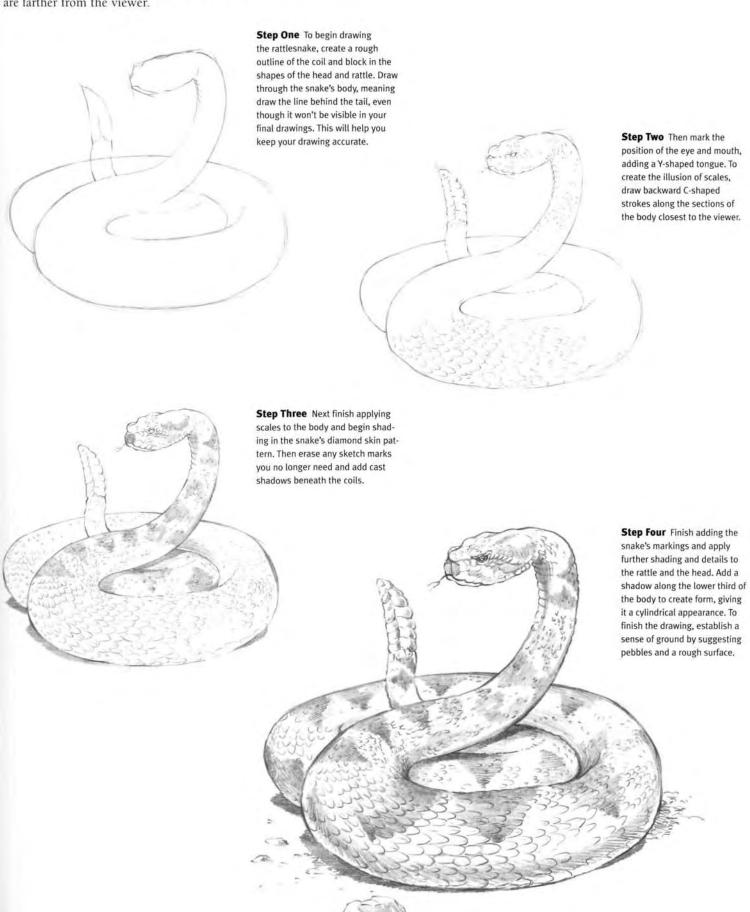

Step Four Continue to apply light shading to the shell, varying the direction of my strokes and leaving plenty of white on the light-colored shell. Develop the texture of the legs and add dimension to the toenails. Then fill in the eye, leaving a highlight in the upper-right quadrant.

RATTLESNAKE BY WILLIAM F. POWELL

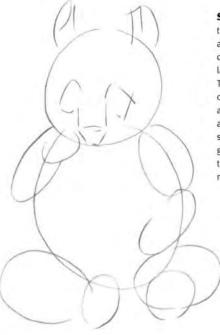

Snake patterns are typically quite repetitive, which makes them beasy to render. Just remember to apply perspective to your drawing, sketching smaller shapes on parts of the reptile that are farther from the viewer.

GIANT PANDA BY WILLIAM F. POWELL

Pandas are an easy subject to approach when you begin with simple shapes. Start with a circles for the head and body; then add ovals for the arms, legs, and paws. Add the details, such as

the eyes, nose, and bamboo leaves. Then use soft, short strokes to indicate the texture of the panda's thick black-and-white fur. When rendering hair, always stroke in the direction it grows.

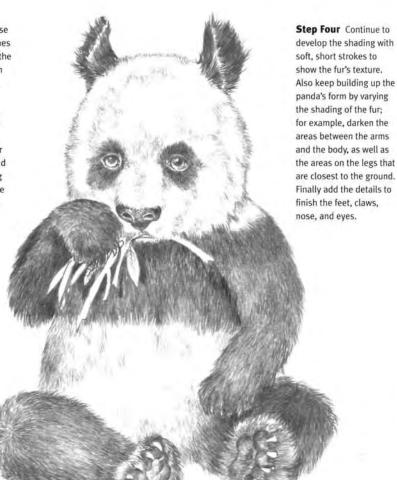

Step One First establish the panda's overall shape and pose. Start with a circle for the head and a larger oval for the body. Then draw a series of ovals for the arms, legs, and feet, dividing the left arm into upper and lower sections. Also mark the general shape and position of the ears, the eye mask, and the nose.

Step Two Next place the eyes, refine the shape of the nose, and sketch in the branch of bamboo. Use the side of a soft pencil and make short, soft marks around the outlines to indicate fur. Then begin shading all the black areas on the coat with an HB pencil, stroking downward in the direction of the hair growth.

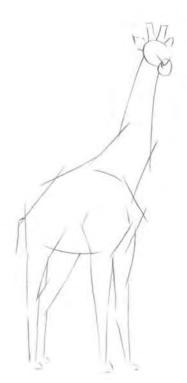

Step Three Now erase any remaining guidelines and continue shading the black areas of fur. Then use a blending stump to smooth the pencil strokes, creating the illusion of soft fur. Add a few closely spaced strokes in the white fur to give it dimension and suggest the underlying muscles. Then draw the footpads and toenails.

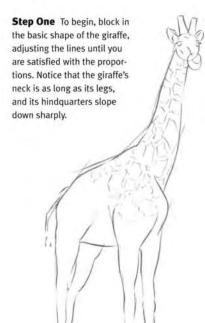

GIRAFFE BY WILLIAM F. POWELL

A ccurate proportions are important when drawing the giraffe; when blocking in your drawing, consider how making the legs too short or the neck too thick would alter the animal's

appearance. Use the head as a unit of measurement to draw the rest of the body in correct proportion—for example, pay attention to how many heads long the legs and neck are.

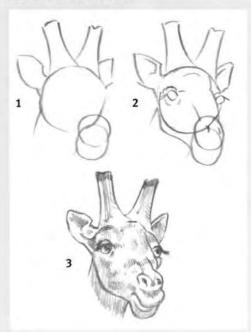

Step Two Now begin to refine the shapes of the legs and rump, smoothing the outline. Then begin placing the features and blocking in the pattern of the coat. For this species of giraffe, the spots all have slightly different irregular shapes, with small gaps between them.

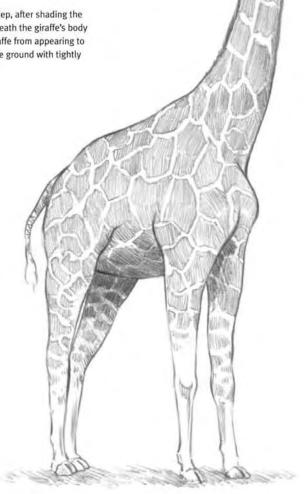

Step Three Now erase any stray sketch marks and focus your attention on rendering the giraffe's face. (See the details in the box below.) Then fill in all the dark patches of the coat, adding the mane with a 2B pencil and short, dense diagonal strokes.

Start with a circle for the head and two smaller circles for the muzzle; then add the horns and ears. Draw a curved jaw line, and sketch in the eyes—and eyelashes—and inner ear details. Then refine all the outlines and shade the face, using a soft pencil for the dark areas and changing the direction of the strokes to follow the forms.

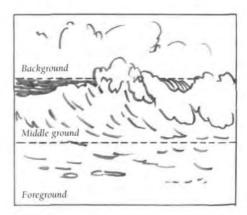

INTRODUCTION TO LANDSCAPES

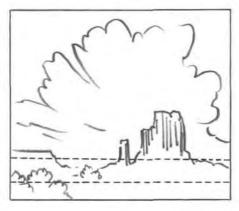

You can discover beautiful landscapes almost anywhere—in your vacation photographs, at local parks, and even in your own back-yard! Throughout the following lessons, you'll learn how to draw any outdoor scene, from rushing rapids to lush foliage and majestic mountains. You'll learn how to choose suitable subjects, create a sense of depth through perspective, and utilize varying points of view. You'll also discover simple techniques for developing common landscape elements—such as trees, clouds, rocks, and water—and how to apply a variety of shading methods to convey a sense of realism. Soon you'll be able to apply your newfound skills and draw your own scenic masterpieces!

LANDSCAPE COMPOSITION BY WILLIAM F. POWELL

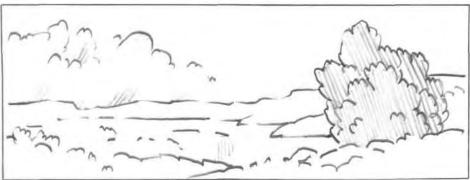

Most landscapes have a background, a middle ground, and a foreground. The background represents areas that are farthest in distance; the foreground represents the areas that appear closest in distance; the middle ground is in between. The back-

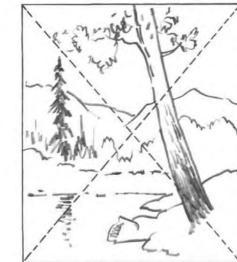

ground, middle ground, and foreground do not have to take up equal space in a composition. Below, the middle ground and foreground are placed low, so the elements in the background become the area of interest.

Choosing a Viewpoint The wide horizontal landscape above illustrates a *panoramic* view. The tree shapes on the left and the right lean slightly toward the center, drawing the eye into the middle of the composition. In the example to the right, notice how the elements direct the eye to the center by subtly "framing" that area. Below, the road in the foreground leads back to the small structure, which is the focus of the drawing.

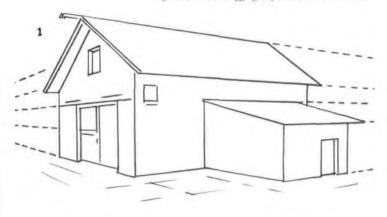

PERSPECTIVE TIPS BY WILLIAM F. POWELL

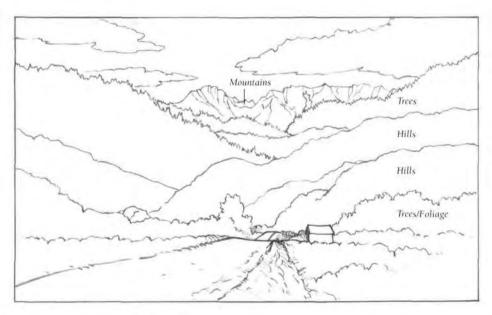

To create a realistic landscape, you should be familiar with some basic principles of perspective. In the line drawing below, the horizontal edges of the planes move closer together as they recede to the left and right, eventually merging at vanishing

points outside the picture area. (Refer to pages 8–9 to get an understanding of the basics of perspective.) Then sketch some simple boxes for practice, moving on to more involved subjects, such as buildings.

Once you've correctly drawn the building with straight lines, you can add details that make the structure appear aged, such as the sagging roof and holes in the walls.

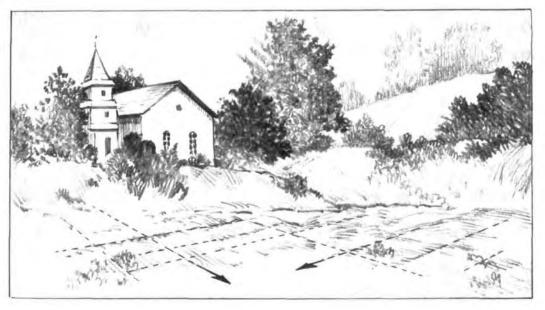

Showing Depth and Distance The illusion of depth is obvious in the line drawing to the left; the road narrows as it travels back into the distance, and the hills overlap each other. To offset the slanting curves of the hills and foliage, a structure was placed just to the right of center.

Practice creating the illusion of depth by sketching some overlapping elements similar to the ones in this landscape. Vary the lines for the areas representing foliage and trees; make them appear bumpy and bushy. For the road, draw two relatively straight lines that move closer together as they recede.

Applying Atmospheric Perspective As objects recede into the distance, they appear smaller and less detailed. Notice that the trees and bushes that surround the little church make it appear far away. Study the arrow directions in the foreground; they help illustrate the correct perspective lines along the ground plane.

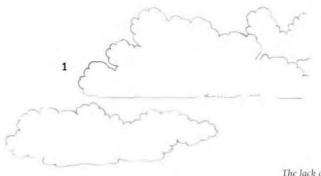

CLOUDS BY WILLIAM F. POWELL

Clouds are great elements to include in a landscape because they can set the mood of the drawing. Some clouds create a dramatic mood, while others evoke a calm feeling.

Rendering Cloud Shapes Use a soft pencil, such as a 2B, to lightly outline the basic cloud shapes. Then use the side of the pencil lead to shade the sky in the background. Your shading will give the clouds fullness and form.

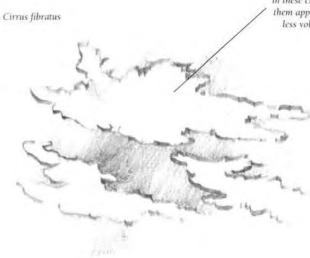

Study the various cloud types on this page, and practice drawing them on your own. Try to create puffy, cottonlike clouds, and thin, smoky ones. Observe clouds you see in the sky, and sketch those as well.

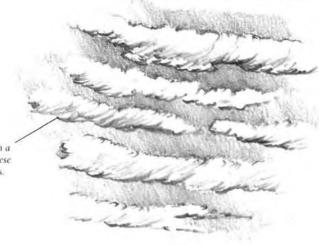

Use a soft pencil with a blunt point to give these clouds some fullness.

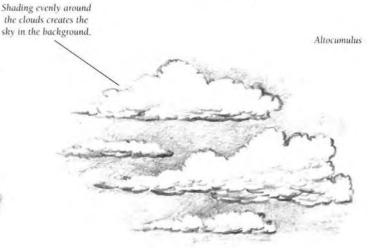

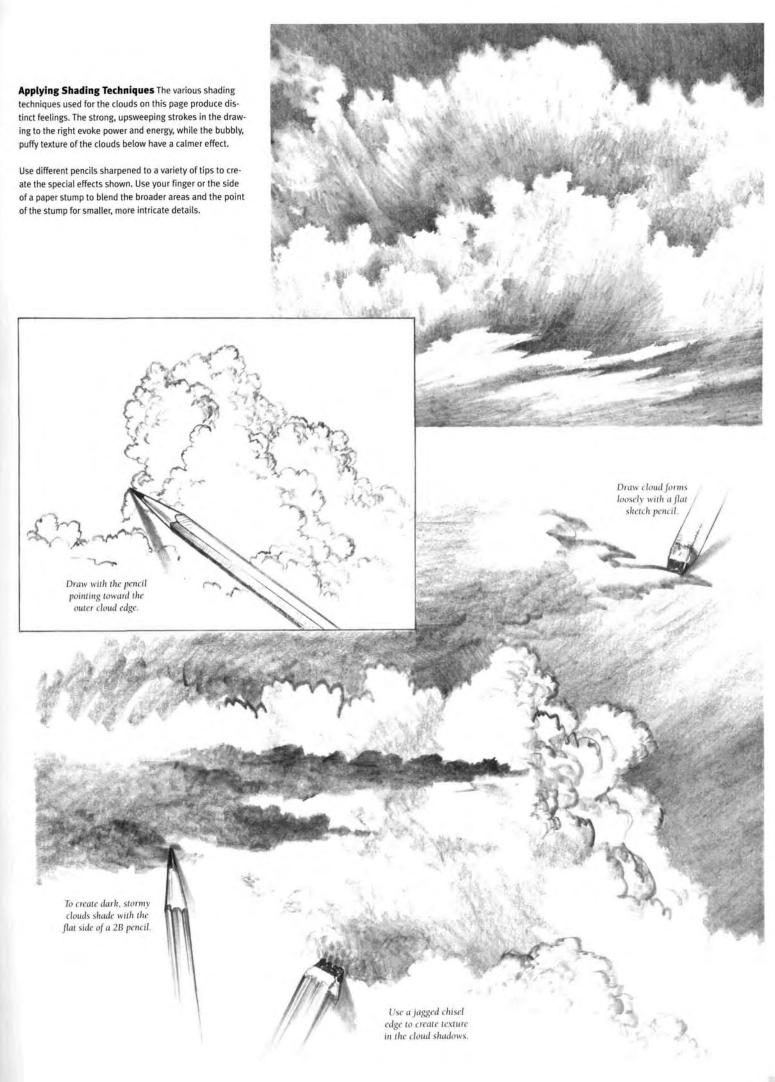

Cumulus fractus

Cumulonimbus

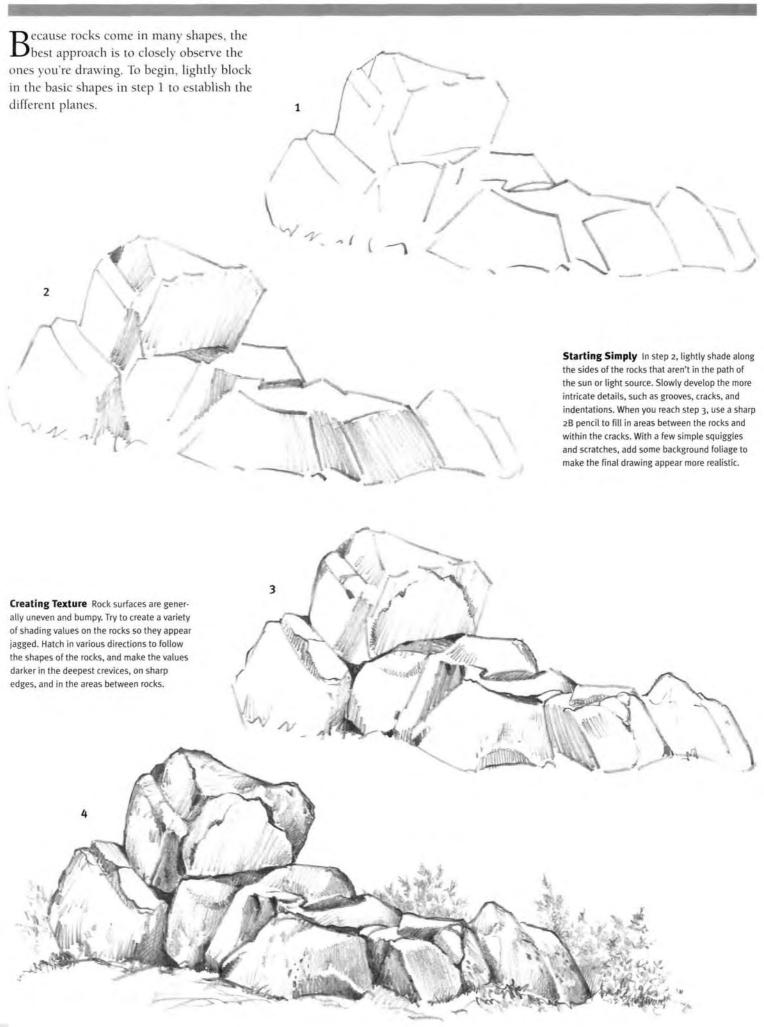

Use a paper stump to smooth out this area.

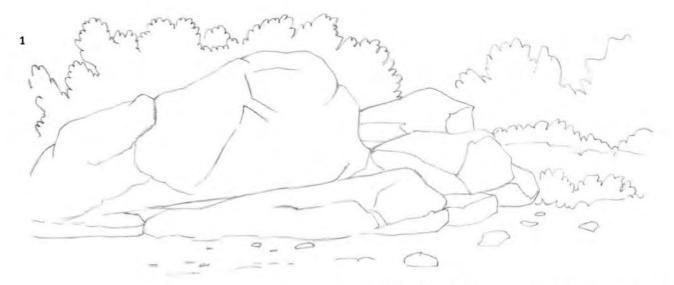

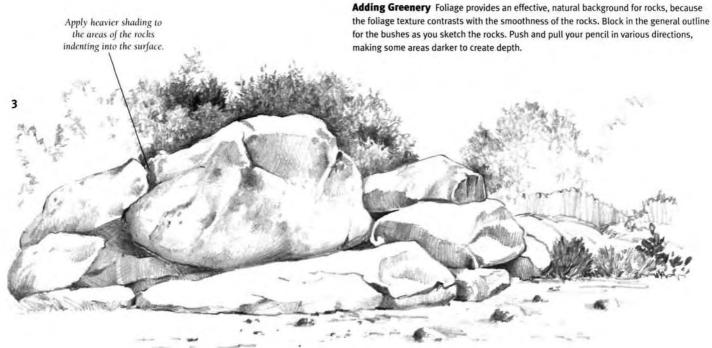

ROCKS BY WILLIAM F. POWELL

Rendering Sunlit Rocks Use the same steps for the rocks on this page, but apply more shading to the entire surfaces. To make the rocks appear as though sunlight is shining on them, use a kneaded eraser to eliminate shading in the appropriate areas, or leave areas of the paper white.

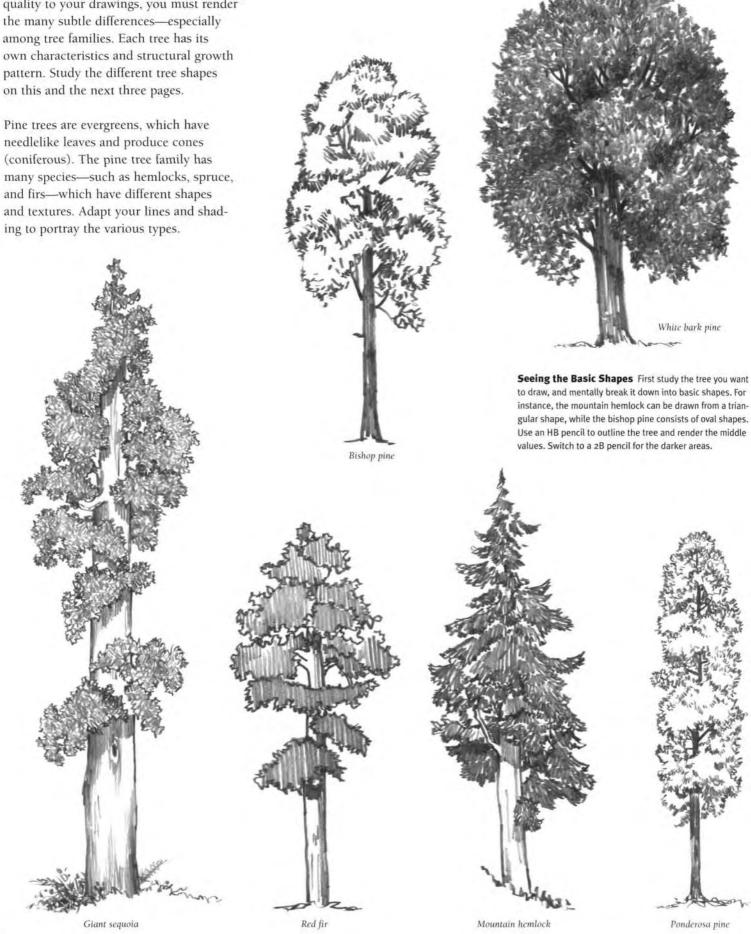

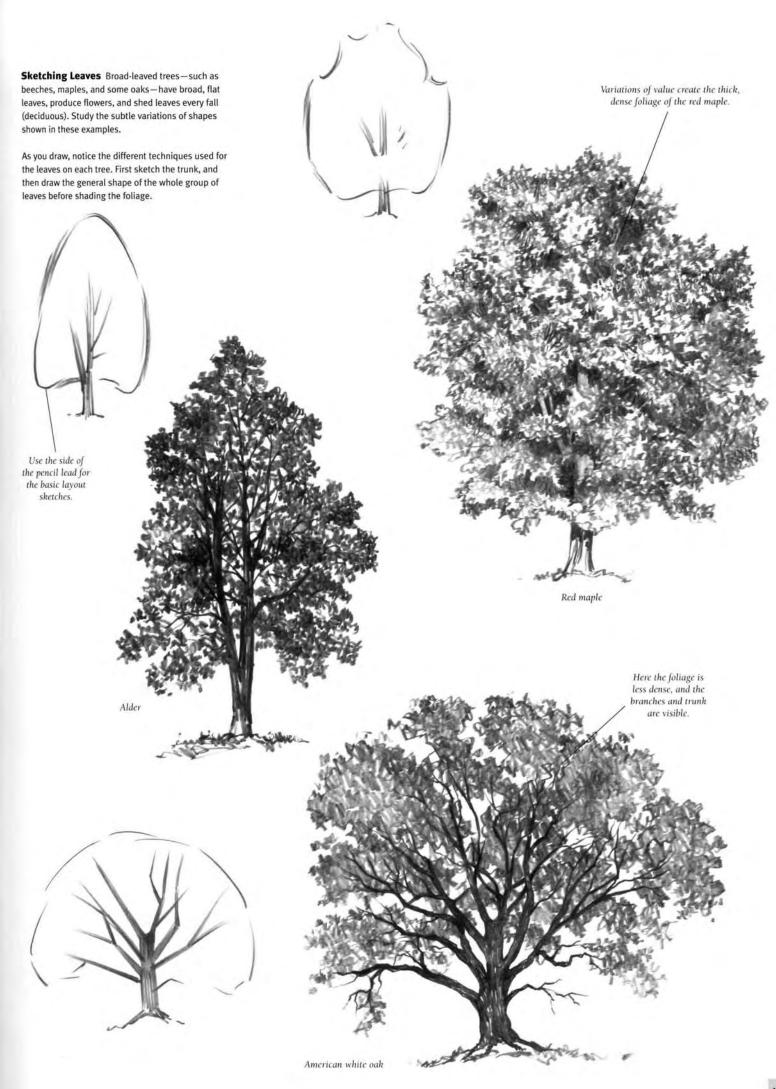

TREE SHAPES BY WILLIAM F. POWELL

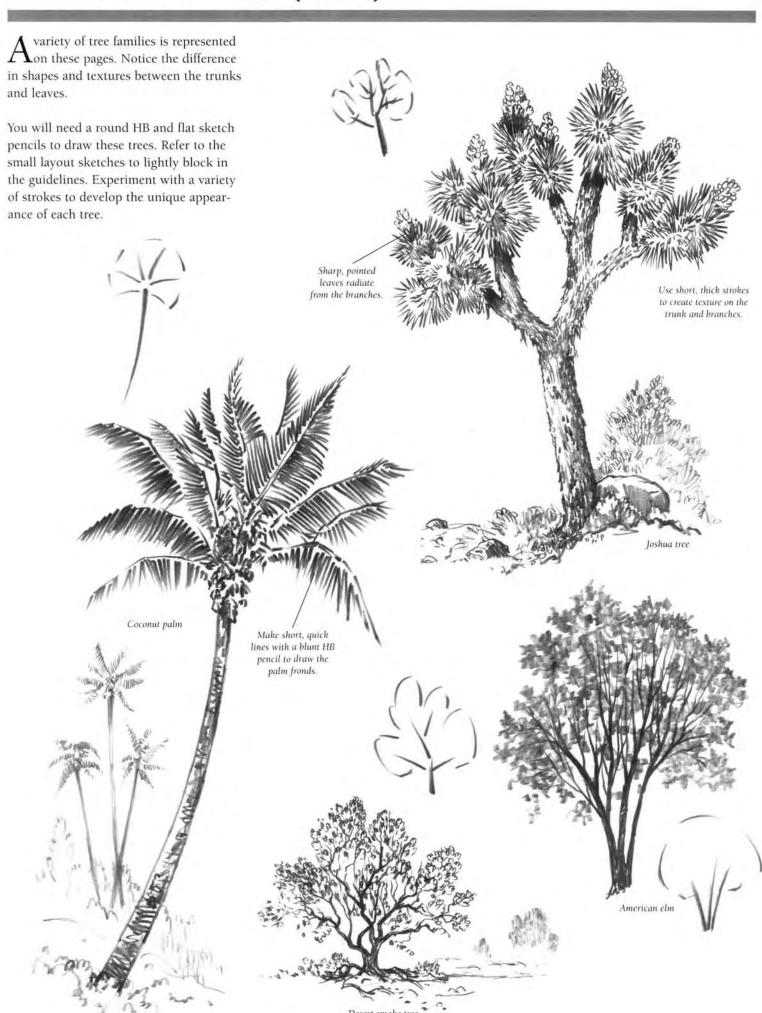

ree shapes vary tremendously. Some L are tall and thin, while others are short and wide. To provide an authentic quality to your drawings, you must render the many subtle differences—especially among tree families. Each tree has its own characteristics and structural growth pattern. Study the different tree shapes

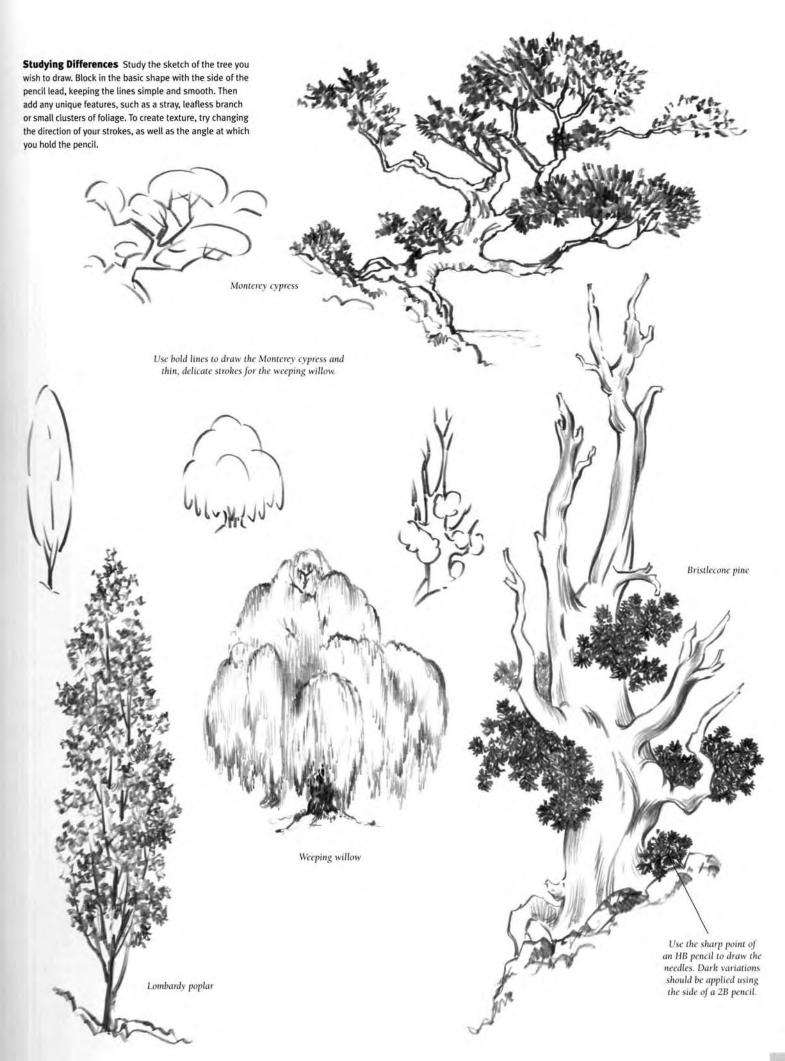

Pine trees are evergreens, which have needlelike leaves and produce cones (coniferous). The pine tree family has many species-such as hemlocks, spruce, and firs-which have different shapes and textures. Adapt your lines and shad-

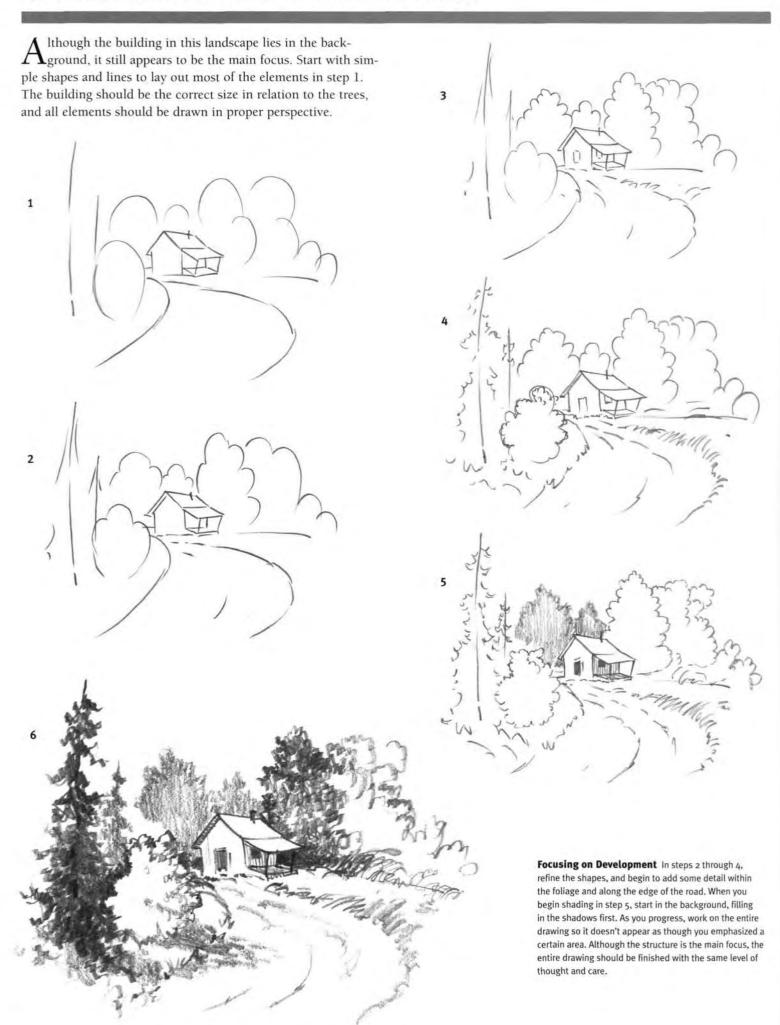

TREE SHAPES (CONT.)

STRUCTURES BY WILLIAM F. POWELL

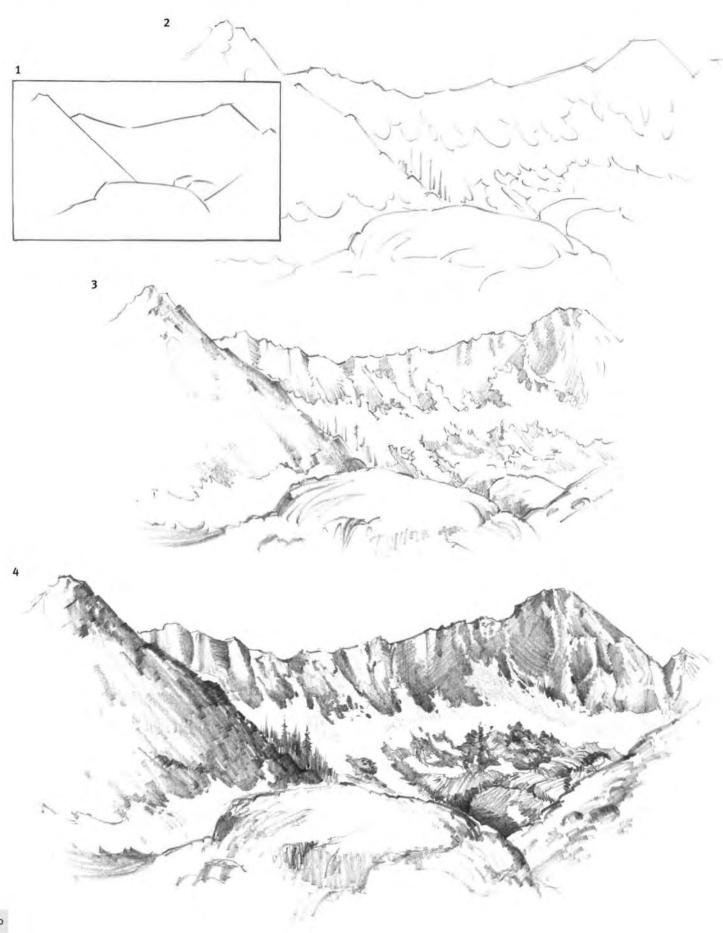

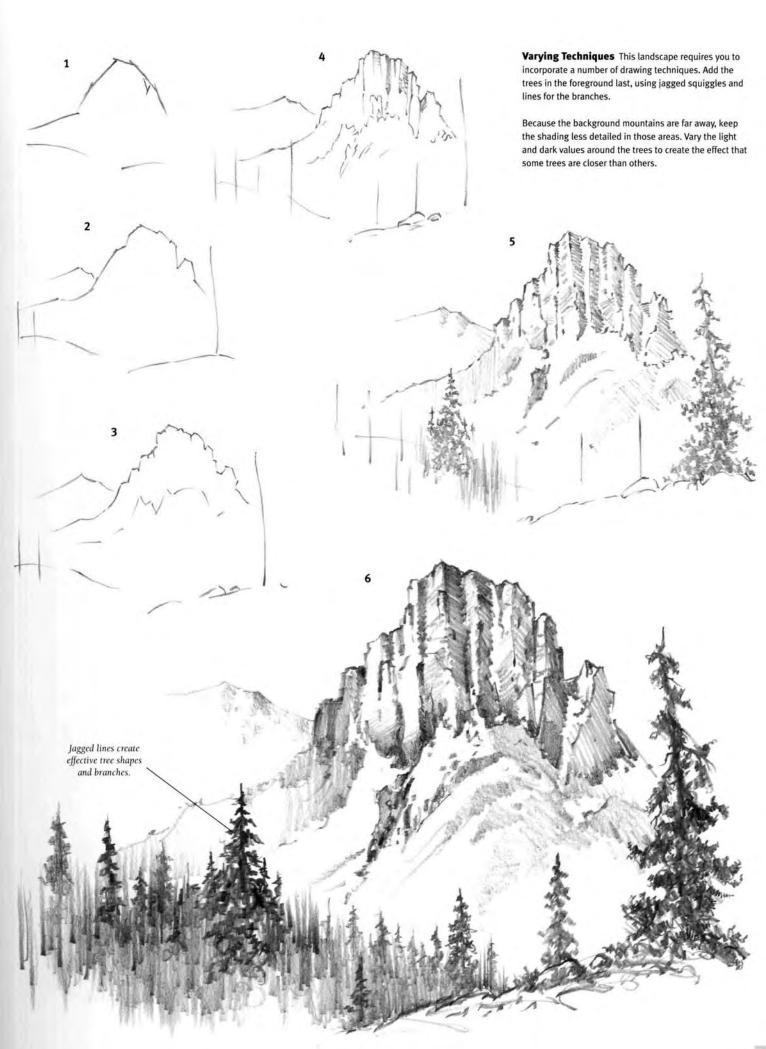

MOUNTAINS BY WILLIAM F. POWELL

A mountain landscape can be blocked in with a few straight lines, as shown in step 1. Refine the shapes into the rugged mountains in step 2, keeping in mind that it isn't necessary to include every indentation and curvature you see. Just include

the major ones to capture the essence of the subject. As you shade in steps 3 and 4, remember that areas indenting deepest into the mountain should be shaded darker to bring out the rocky texture.

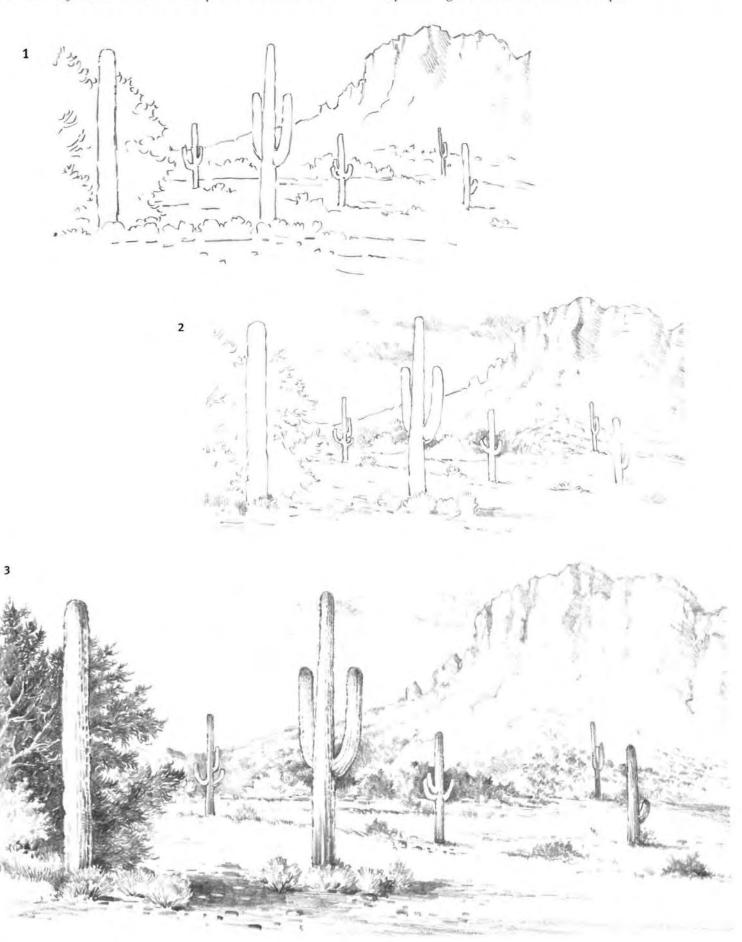

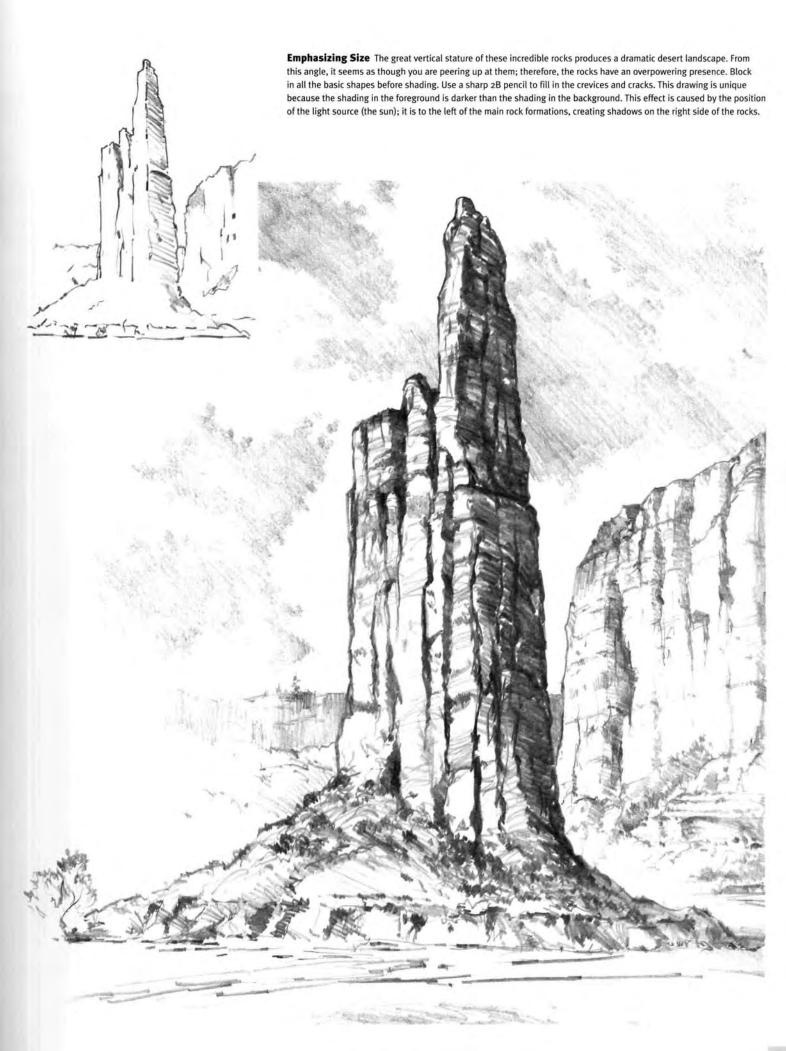

DESERTS BY WILLIAM F. POWELL

 D^{eserts} make excellent landscape subjects because they provide a variety of challenging textures and shapes. In step 1, lay out the major elements with an HB pencil then refine the

shapes. Then add a few light shadows in step 2. The finished drawing shows minimal shading, which creates the illusion of expansive light around the entire landscape.

CREEK WITH ROCKS BY WILLIAM F. POWELL

Drawing landscapes containing creeks and rocks is a great way to improve artistic skills because of the variety of surface textures. It's imperative that your preliminary drawing accurately

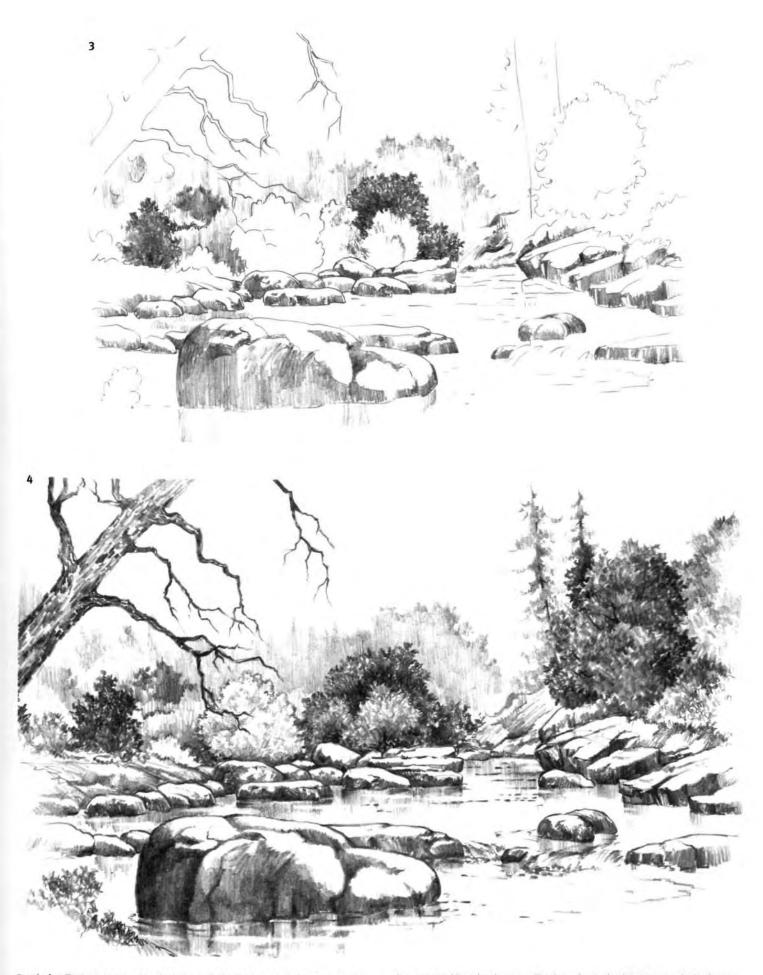

shows depth by overlapping elements, uses proper perspective, and maintains a pleasing balance of elements. This eliminates the need to make corrections later.

Starting with a Basic Sketch Begin shading the trees in the distance; then work your way to the middle ground and foreground. Remember—don't completely shade each object before moving to the next one. Work on the entire drawing so it maintains a sense of unity.

You don't want one area to unbalance the landscape or appear as though you spent more time on it. Even though there are many light and dark areas throughout the drawing, the degree of shading should remain relatively consistent.

Rendering Texture Use the side of an HB pencil, shading in even strokes, to create the reflections in the water. Keep in mind that an object's reflection is somewhat distorted in moving water and mirrored in still water. For example, the reflection of the sharp rock edges

here appears blurred and uneven. Closely study your landscape so you don't miss any of the details. Apply strokes in directions that correspond with the rocks' rugged, uneven texture, and fill in the areas between the cracks with a sharp 2B or 4B pencil.

SYCAMORE LANE BY WILLIAM F. POWELL

Agood sketch will go a long way toward capturing the mood of a scene. In this drawing, the tree is obviously old and majestic. The trunk leans dramatically from its base to the

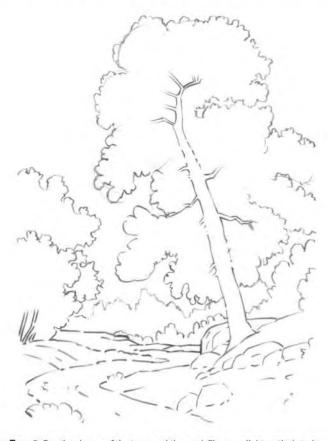

Use an HB pencil to block in the mass shapes.

Step One To begin this scene, place the basic shapes, refine them, and then add values. Apply light and middle values to establish a backdrop for more intense shading.

Step Three Continue adding values, and work your way to the foreground.

middle of the drawing at the top. The winding road serves two purposes—it leads the eye into the drawing and creates contrast, which balances out the nearly straight line of the trunk.

Step Two Refine the shapes of the trees and the road. Then use light vertical strokes for the trees in the background. Continue adding details as you work toward the foreground.

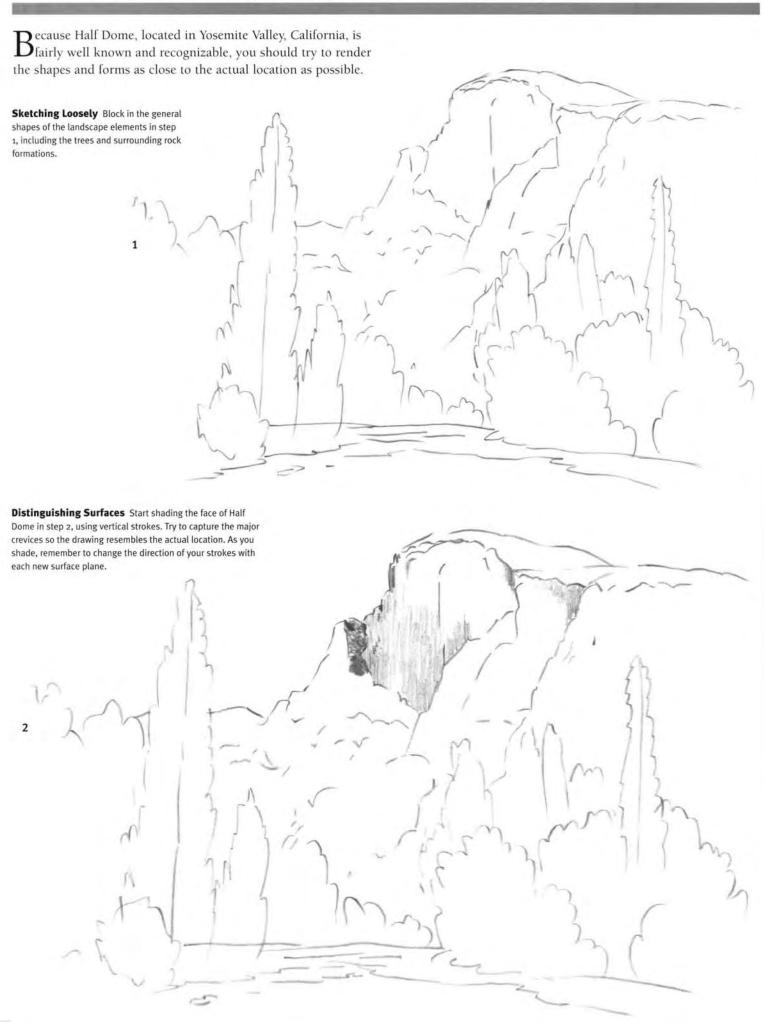

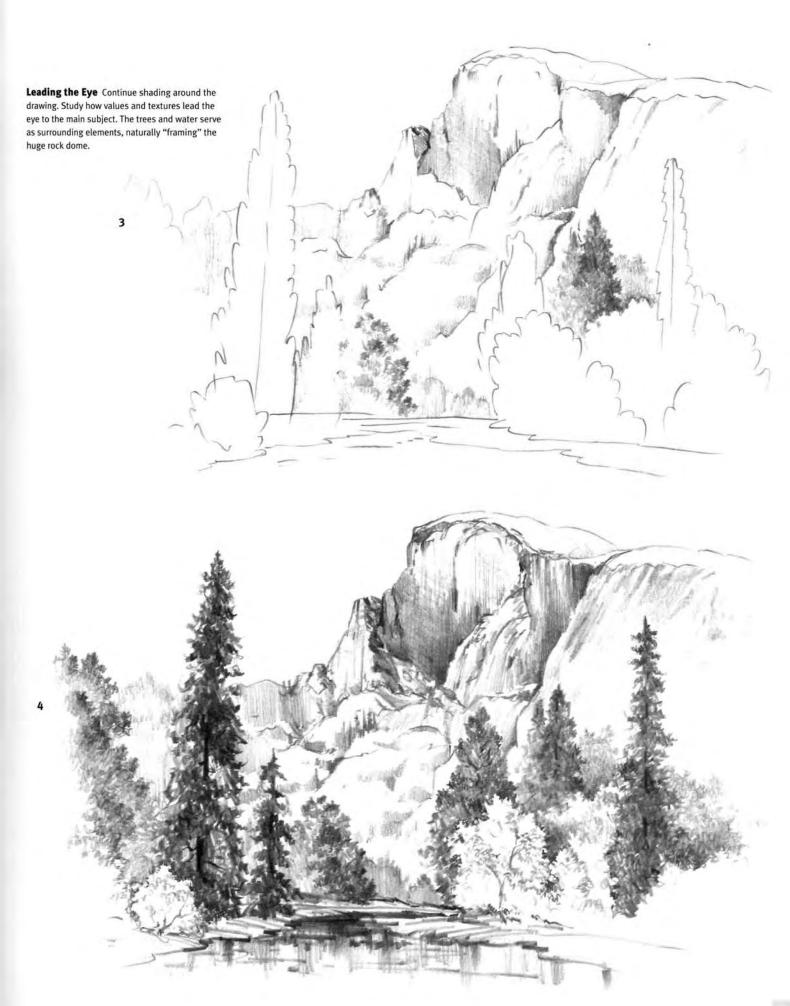

Step Four Use the side of an HB for the wide strokes of foliage and shaded areas.

Step Five Add final dark values. Continue the foliage texture, leaving some areas lighter to create depth. Lightly shade the sky areas; then clean out the cloud forms with a kneaded eraser.

HALF DOME, YOSEMITE BY WILLIAM F. POWELL

INTRODUCTION TO PEOPLE

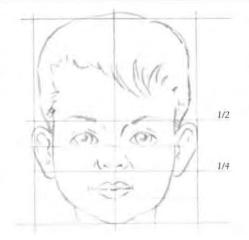

From the subtleties of emotion conveyed by facial expressions to the limitless number of shapes the human form can take, people are some of the most captivating subjects to draw. Knowing how to capture a human likeness also gives you the confidence to explore a wider range of subjects and compositions in your drawing adventures. In the following pages, you'll learn the basic principles of drawing figures, from finding the proper proportions to sketching profiles and studying the movements of the human body. You'll also learn how to apply simple shading techniques that will bring life to all of your portraits!

BEGINNING PORTRAITURE BY MICHAEL BUTKUS

good starting point for drawing people is the head and face. A The shapes are fairly simple, and the proportions are easy to measure. And portraiture is also very rewarding. You can feel a great sense of satisfaction when you look at a portrait you've drawn and see a true likeness of your subject, especially when the model is someone near and dear to you. So why not start with children?

DRAWING A CHILD'S PORTRAIT

Once you've practiced drawing features, you're ready for a full portrait. You'll probably want to draw from a photo, though, since children rarely sit still for very long! Study the features carefully, and try to draw what you truly see, and not what you think an eye or a nose should look like. But don't be discouraged if you don't get a perfect likeness right off the bat. Just keep practicing!

Understanding a **Child's Proportions**

Draw guidelines to divide the head in half horizontally: then divide the lower half into fourths. Use the guidelines to place the eyes, nose, ears, and mouth, as shown.

Separating the Features Before you attempt a full portrait, try drawing the features separately to get a feel for the shapes and forms. Look at faces in books and magazines, and draw as many different features as you can.

Starting with a Good Photo When working from photographs, some artists prefer candid, relaxed poses over formal, "shoulders square" portraits. You can also try to get a closeup shot of the face so you can really study the features.

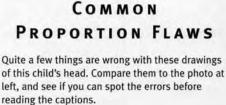

Finishing the Portrait

With the side of my pencil, start laying in the middle values of the shadow areas. increasing the pressure slightly around the eye, nose, and collar. For the darkest shadows and the straight, black hair, use the side of a 2B and overlap your strokes, adding a few fine hairs along the forehead with the sharppointed tip of my pencil.

Sketching the Guidelines

First pencil an oval for the shape of the head, and lightly draw a vertical center line. Then add horizontal guidelines according to the chart at the top of the page, and sketched in the general outlines of the features. When you are happy with the overall sketch, carefully erase the guidelines.

Thin Neck

The child in the photo at left has a slender neck, but not this slender! Refer to the photo to see where his neck appears to touch his face and ear.

Not Enough Forehead

Children have proportionately larger foreheads than adults do. By making the forehead too small in this example, I've added years to the child's age.

Cheeks Too Round

Children do have round faces. but don't make them look like chipmunks. And be sure to make the ears round, not pointed.

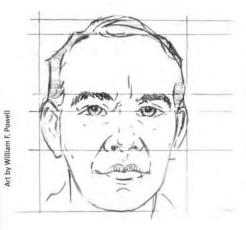

Sticks for Eyelashes

Eyelashes should not stick straight out like spokes on a wheel. And draw the teeth as one shape; don't try to draw each tooth separately.

DRAWING THE ADULT HEAD

An adult's head has slightly different proportions than a child's head (see page 124 for more precise adult proportions), but the drawing process is the same: sketch in guidelines to place the features, and start with a sketch of basic shapes. And don't forget the profile view. Adults with interesting features are a lot of fun to draw from the side, where you can really see the shape of the brow, the outline of the nose, and the form of the lips.

Focusing on Adult
Proportions Look for
the proportions that make
your adult subject unique;
notice the distance from
the top of the head to the
eyes, from the eyes to the
the nose, and from the
nose to the chin. Look at
where the mouth falls
between the nose and the
chin and where the ears
align with the eyes and
the nose.

Drawing to Some peop nounced fe be fun to diffle. Use the side of an in

Drawing the Profile

Some people have very pronounced features, so it can
be fun to draw them in profile. Use the point and the
side of an HB for this pose.

If you can't find a photo of an expression you want to draw, try looking in a mirror and drawing your own expressions. That way you can "custom make" them!

EXPRESSING EMOTION

Drawing a wide range of different facial expressions and emotions can be quite enjoyable, especially ones that are extreme. Because these are just studies and not formal portraits, draw loosely to add energy and a look of spontaneity, as if a camera had captured the face at just that moment. Some artists don't bother with a background, as they don't want anything to detract from the expression. But do draw the neck and shoulders so the head doesn't appear to be floating in space.

Depicting Shock When you want to show an extreme expression, focus on the lines around the eyes and mouth. Exposing the whole, round shape of the iris conveys a sense of shock, just as the exposed eyelid and open mouth do.

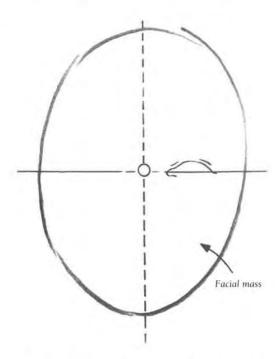

Portraying Happiness Young children have smooth complexions, so make the smile lines fairly subtle. Use light shading with the side of your pencil to create creases around the mouth, and make the eyes slightly narrower to show how smiles pull the cheek muscles up.

Showing Surprise
Here a lot of the face has been left white to keep most of the attention on the eyes and mouth.
Use the tip of the pencil for the loose expression lines and the side for the mass of dark hair.

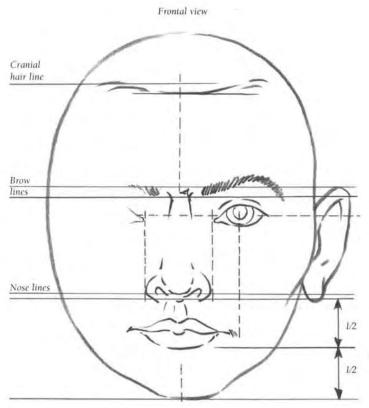

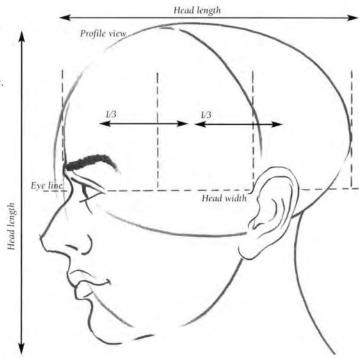

ADULT HEAD PROPORTIONS BY WILLIAM F. POWELL

Learning proper head proportions will enable you to accurately draw the head of a person. Study the measurements on the illustration at right. Then draw a basic oval head shape, and divide it in half with a light, horizontal line. On an adult, the eyes fall on this line, usually about one "eye-width" apart. Draw another line dividing the head in half vertically to locate the position of the nose.

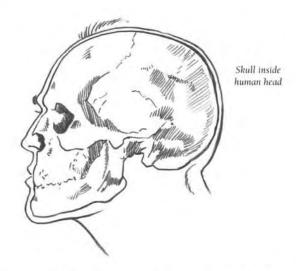

Placing Facial Features The diagram below illustrates how to determine correct placement for the rest of the facial features. Study it closely before beginning to draw, and make some practice sketches. The bottom of the nose lies halfway between the brow line and the bottom of the chin. The bottom lip rests halfway between the nose and the chin. The length of the ears extends from brow line to the bottom of the nose.

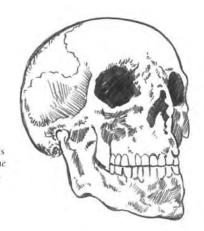

Looking at Profile Proportions The horizontal length of the head, including the nose, is usually equal to the vertical length. Divide the cranial mass into thirds to help place the ear.

Recognizing Bone Structure The drawing above illustrates how the skull "fills up" the head. Familiarizing yourself with bone structure is especially helpful at the shading stage. You'll know why the face bulges and curves in certain areas because you'll be aware of the bones that lie underneath the skin.

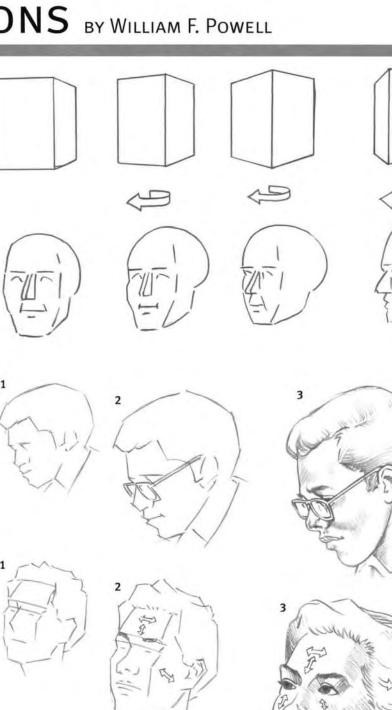

Three-quarter view of skull

The bottom lip rests halfway between the nose and the chin.

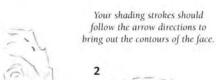

HEAD POSITIONS BY WILLIAM F. POWELL

The boxes shown here correlate with the head positions directly below them. Drawing boxes like these first will help you correctly position the head. The boxes also allow the major frontal and profile planes, or level surfaces, of the face to be discernable. Once you become comfortable with this process, practice drawing the heads shown on this page.

Keep all guidelines very light so they won't show in your actual drawing.

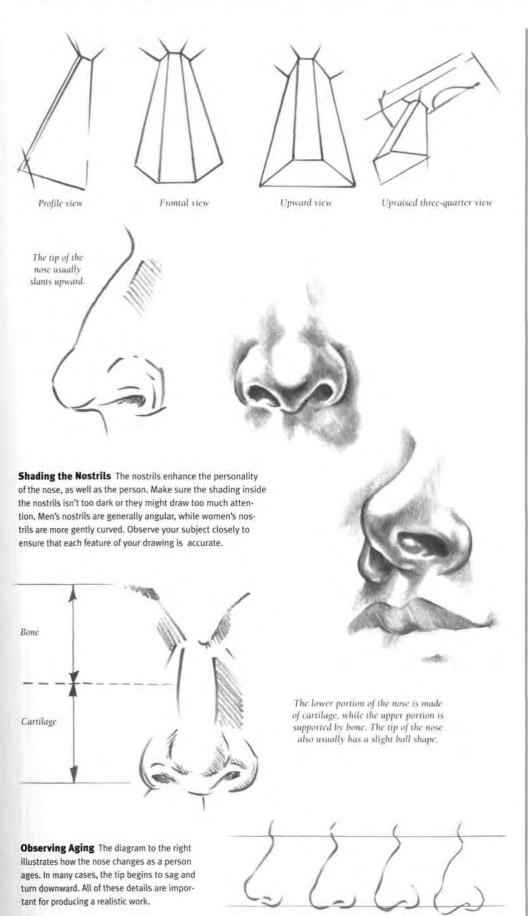

EYES BY WILLIAM F. POWELL

The eyes are the most important feature for achieving a true likeness. They also Even if the rest of the reveal the mood or emotion of the person features are correct, you are drawing. Study and practice the diaif the eyes aren't drawn correctly your drawing won't look like grams showing how to block in frontal and profile views of eyes. Notice that with the your subject. profile, you don't begin with the same shape as with the frontal view. Outside eye 2 contours (front) A person's eyes are rarely symmetrical. Look for the subtle differences in each eye to achieve a real likeness. Outside eye contours (profile) Shading the Eyes Shade delicately around the eyes, but make your strokes dark enough to show the eyes' depth and indentation into the face. Very sharp pencils are best for filling in the creases and corners around the eye. These tiny areas (which don't get much light) should be very dark, gradually getting lighter as you shade away from the eye to bring out the contours of the face. Pay particular attention to the highlights in the eye. They bring life and realism to the drawing. Eyebrows also play an important part of facial expression. They can be bushy or thin, arched or straight. Study your subject's eyebrows carefully. 2 A three-quarter angle view can generate a totally different mood, especially if the eyes aren't completely open.

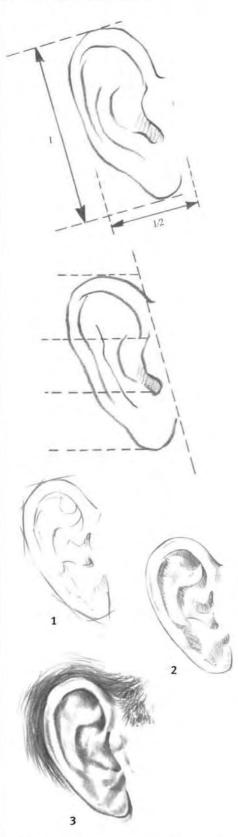

NOSES AND EARS BY WILLIAM F. POWELL

Noses can be easily developed from simple straight lines. The first step is to block in the overall shape, as illustrated by the sketches below. Smooth out the corners into subtle curves in

accordance with the shape of the nose. (A three-quarter view can also be drawn with this method.) Then, once you have a good preliminary drawing, begin shading to create form.

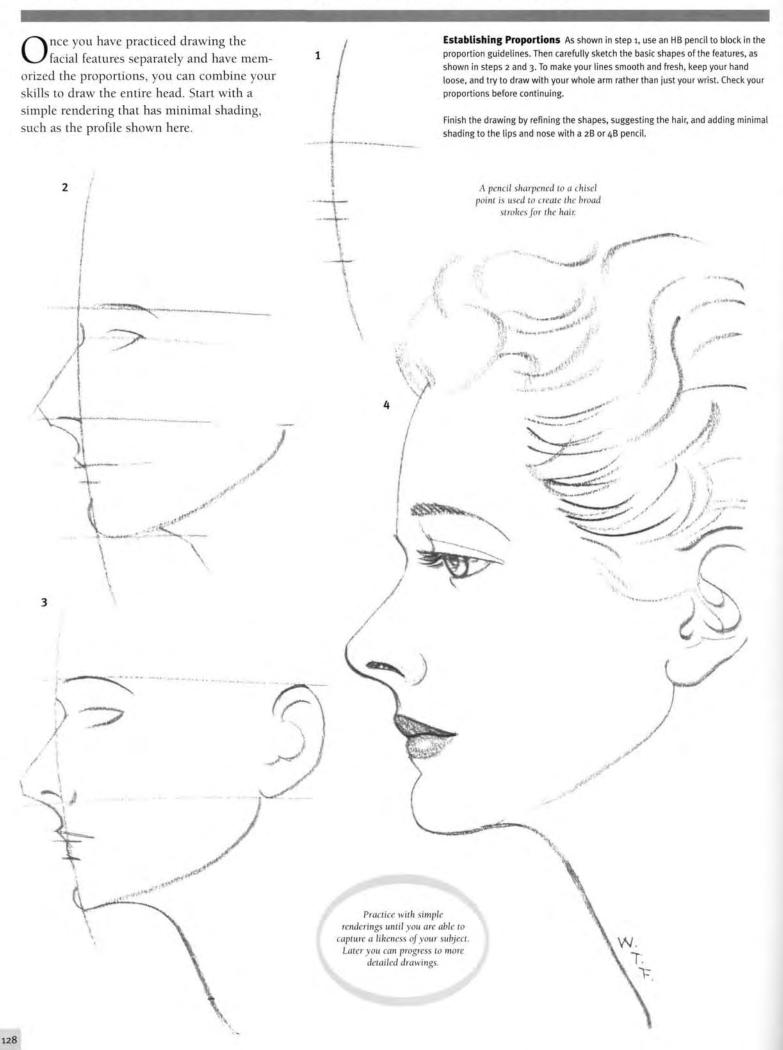

Process of an aging nose

Rendering Ears Ears usually connect to the head at a slight angle. To draw an ear, first sketch the general shape, and divide it into thirds, as shown above. Sketch the "ridges" of the ear with light lines, studying where they fall in relation to the division lines. These ridges indicate where to bring out the grooves in the ear; you should shade heavier inside them.

WOMAN IN PROFILE BY WALTER T. FOSTER

WOMAN FRONT VIEW BY WILLIAM F. POWELL

When you are ready to progress to more detailed drawings, try working from a photo. A black-and-white photo will allow you to see all the variations in value, which will be helpful when shading your subject.

Drawing from a Snapshot In this photo, you can see the subject's delicate features, smooth skin, and sparkling eyes. But you should also to try to capture the features that are unique to her: the slightly crooked mouth, smile lines, and wide-set eyes. Note also that you can barely see her nostrils. It's details like these that will make the drawing look like the subject and no one else.

Step Four Continue building up the shading with the charcoal pencil and willow stick. For gradual blends and soft gradations of value, rub the area gently with your finger or a blending stump. (Don't use a brush or cloth to remove the excess charcoal dust; it will smear the drawing.)

Step One Start with a sharp HB charcoal pencil and very lightly sketch the general shapes of the head, hair, and shirt collar. (Charcoal is used for this drawing because it allows for very subtle value changes.) Then lightly place the facial features.

Step Two Begin refining the features, adding the pupil and iris in each eye, plus dimples and smile lines. At this stage, study the photo carefully so you can duplicate the angles and lines that make the features unique to your subject. Then begin adding a few shadows.

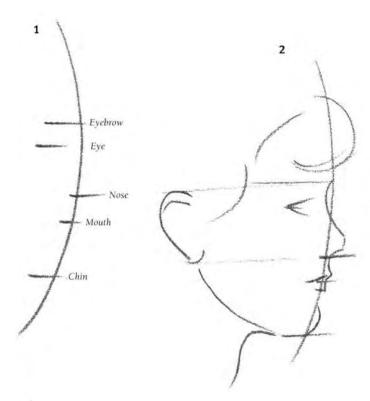

Helliam F. Powell

Step Three As you develop the forms with shading, use the side of an HB charcoal pencil and follow the direction of the facial planes. Then shape a kneaded eraser to a point to lift out the eye highlights, and use a soft willow charcoal stick for the dark masses of hair.

GIRL IN PROFILE BY WALTER T. FOSTER

The youth of children is brought out with a delicate approach. Simple renderings like these require minimal shading to create the appearance of smooth skin.

Placing the Features In step 1, begin with a very simple block-in method, using a curved line and horizontal strokes to determine placement of the eyebrow, eye, nose, mouth, and chin. In step 2, sketch in the features, along with the outline of the hair. Study your model to make sure that your proportions are correct.

Remember that children generally have smooth, round features.

Refining Details In step 3, refine the features and suggest the waves and curls with loose strokes. In the final rendering, develop the features, making your strokes bold and definite. Note that you don't have to draw every strand of hair; just a few lines are enough to indicate the hair style.

BOY IN PROFILE BY WILLIAM F. POWELL

This drawing of a young boy uses a slightly different block-in method than was used in the previous exercise. The outline of the entire head shape is sketched first, along with the proportion guidelines. Of course, you can use whichever method you prefer.

Step Two Begin to darken and smooth your block-in lines into more refined shapes. As you work, keep checking your proportions.

Use a 2B pencil with a blunt tip to create darker strokes in this area, bringing out the part in the hair.

Step One Lightly sketch the overall head shape with short, quick strokes. This may be tricky because the head is not at a complete profile—but you can do it! Observe your subject closely; notice that a portion of the right cheek is visible, along with the eyelashes of the right eye.

With just a few minor changes, you can change the expression on your subject's face. Try raising the eyebrows, widening the eyes, and opening the mouth. What happens?

Step Three As you reach the final, develop the form by shading within the smile lines, under the chin, below the hairline, and inside the part of the hair.

THE BODY BY WILLIAM F. POWELL

The human body is challenging to render; therefore it's important to start with a quick drawing of the basic skeletal structure. The human skeleton can be compared to the wood frame of a house; it supports and affects the figure's entire form.

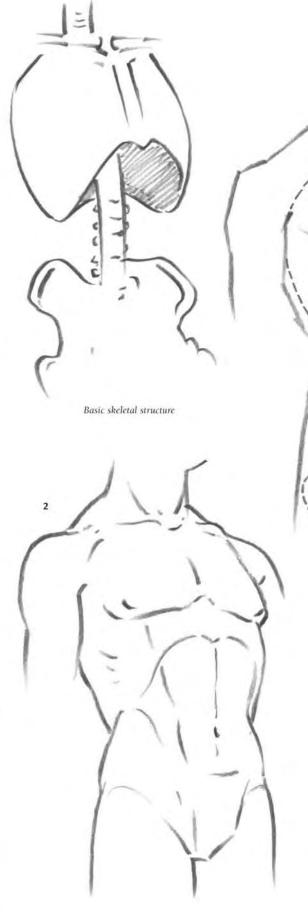

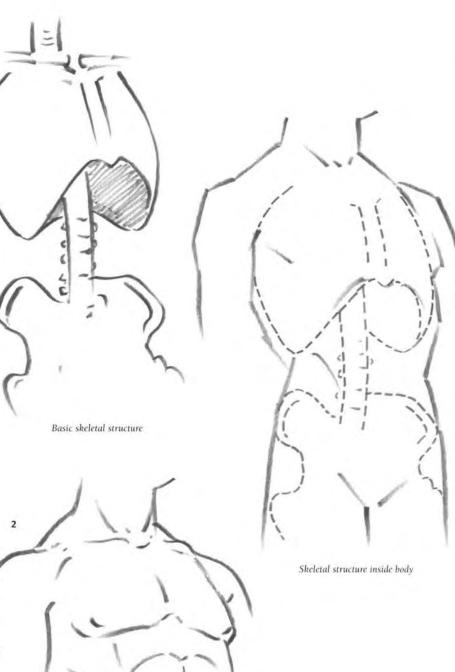

Torso forms into triangle shape

Drawing the Torso The frontal view illustrates the planes of the body, which are created from the skeleton's form. In men's bodies especially, the torso forms a triangle shape between the shoulder blades and the waist. In women's torsos, the triangle shape is generally less pronounced, and their bodies can even resemble an inverted triangle. In other words, the widest part of the body may be at the hips. (Refer to the diagram on page 134.)

The muscles also affect the body's form. You might want to study human muscular structure to gain further insight into shading the contours of the body.

HANDS AND FEET BY WILLIAM F. POWELL

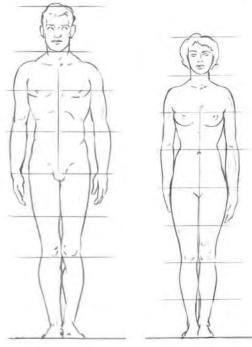

FIGURES IN ACTION BY MICHAEL BUTKUS

To draw the human figure from head to toe, it helps to know something about the framework on which it's built. Many art classes have students draw people as skeletons—which is good practice in visualizing how all the parts fit together. You don't have to try that exercise; the simple drawings on page 132 will suffice. But do start with simple stick figure sketches of the skull, shoulders, rib cage, and add the arms and legs. Then once you have the proportions right, you can flesh out the forms.

CAPTURING ACTION

Remember that a gesture drawing is a quick, rough sketch that illustrates a moment of an action. (See page 15.) The idea is just to capture the gesture—it isn't about trying to get a likeness. Give yourself 10 minutes to draw the entire figure engaged in some sport or full-body activity, working either from life or from a photo. Set a timer and stop when the alarm goes off. Working against the clock teaches you to focus on the essentials and get them down on paper quickly.

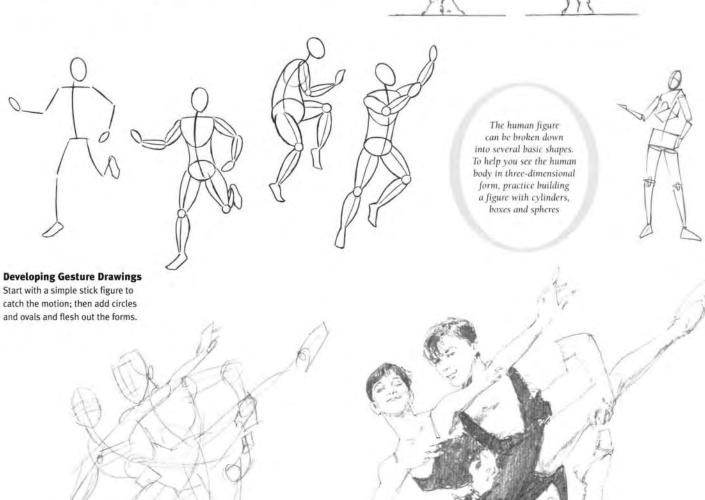

Sketching the Adult Form The average adult is 7-1/2 heads tall, but artists often draw adults 8 heads tall to add stature. The adult male has wide shoulders and narrower hips, whereas the adult female has narrower shoulders and wide hips. Notice that the midpoint is at the hips, not the waist, and that the fingers reach to mid-thigh. Refer to this chart to help you draw the correct proportions.

Blocking in Shadows
To keep the feeling of free
movement, don't draw
perfectly refined lines and
shadows. Instead, focus
on making delicate out-

lines for the dancers, and

quickly lay in broad, dark

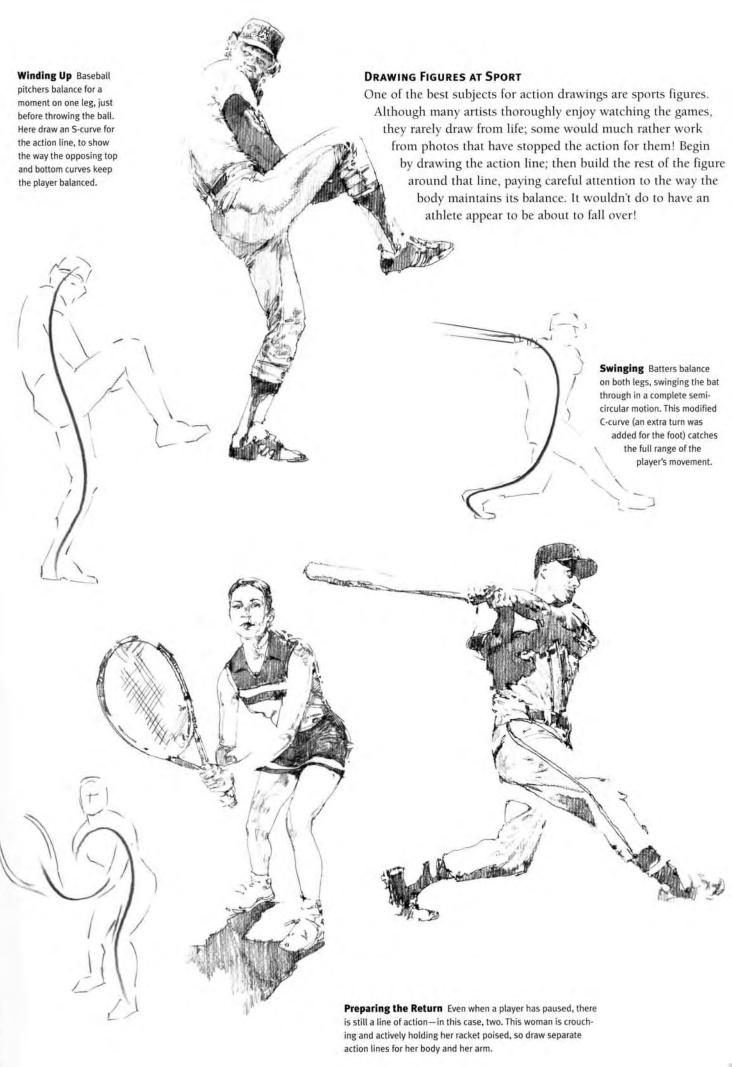

strokes for their clothing.

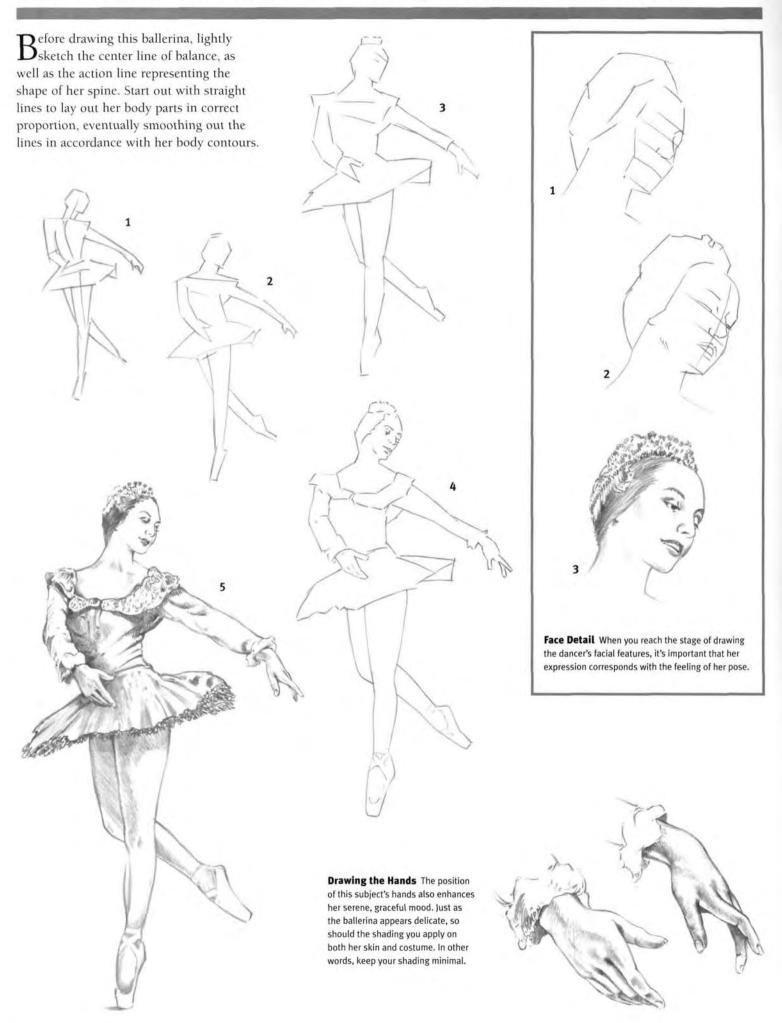

Suggesting Movement First sketch in diagonal center

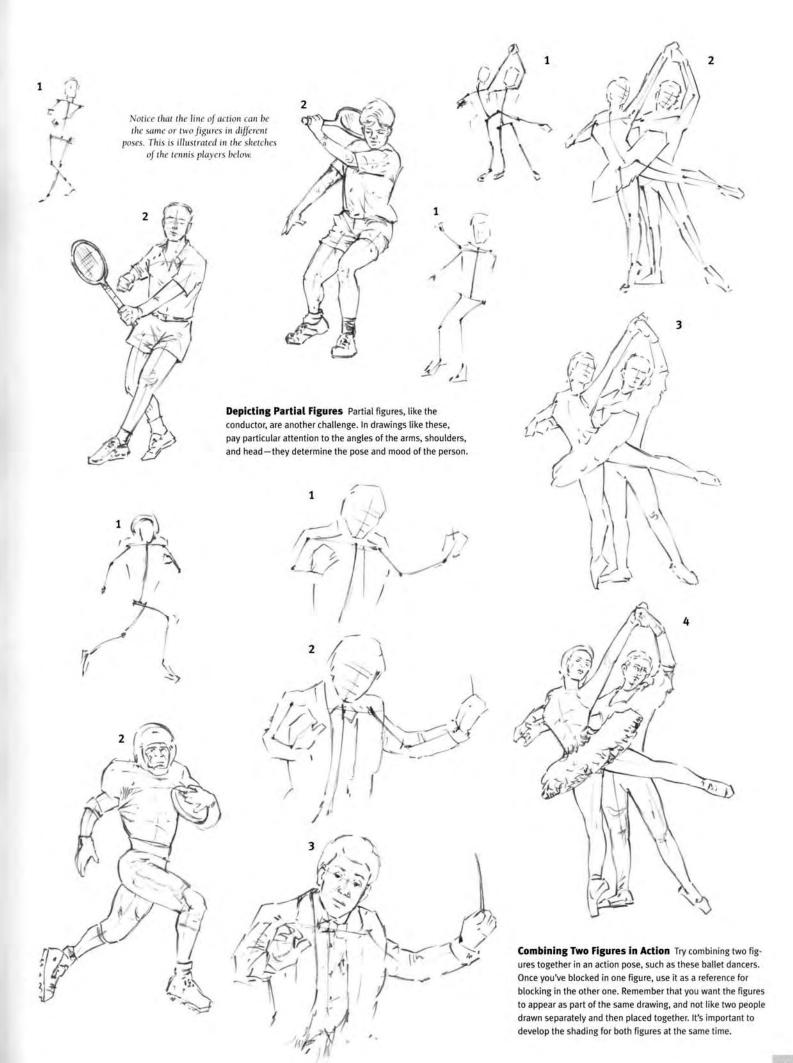

lines for the arms and legs, adding ovals and circles for the

heads and joints. Then rough in the general outlines.

FIGURES IN ACTION (CONT.) BY WILLIAM F. POWELL

PORTRAYING CHILDREN BY MICHAEL BUTKUS

hildren are a joy to watch, and they make charming drawing subjects. If you don't have children of your own to observe, take a sketchpad to the beach or a neighborhood park, and make quick thumbnail sketches of kids at play. Sometimes it actually helps if you don't know your subject personally, because that way you see from a fresh and objective point of view.

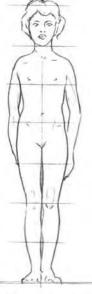

MAKING QUICK SKETCHES

Showing Her Age

Children are more free and flexible in their expressions, gestures, poses, and movements than their inhibited elders are. To make sure you don't overwork your drawings of children, do speed sketches: Watch your subject closely for several minutes; then close your eyes and form a picture of what you just saw. Next open your eyes and draw quickly from memory. This helps you keep your drawings uncomplicated—just as children are. Try it; it's a lot of fun!

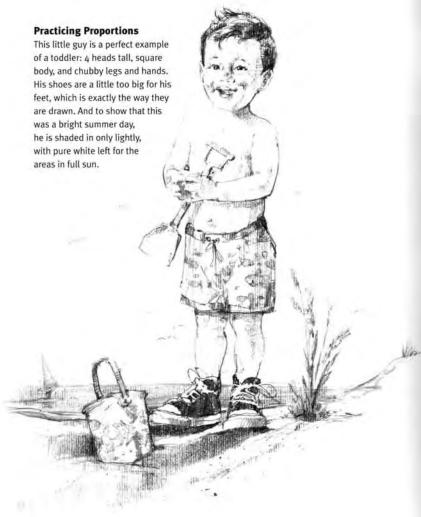

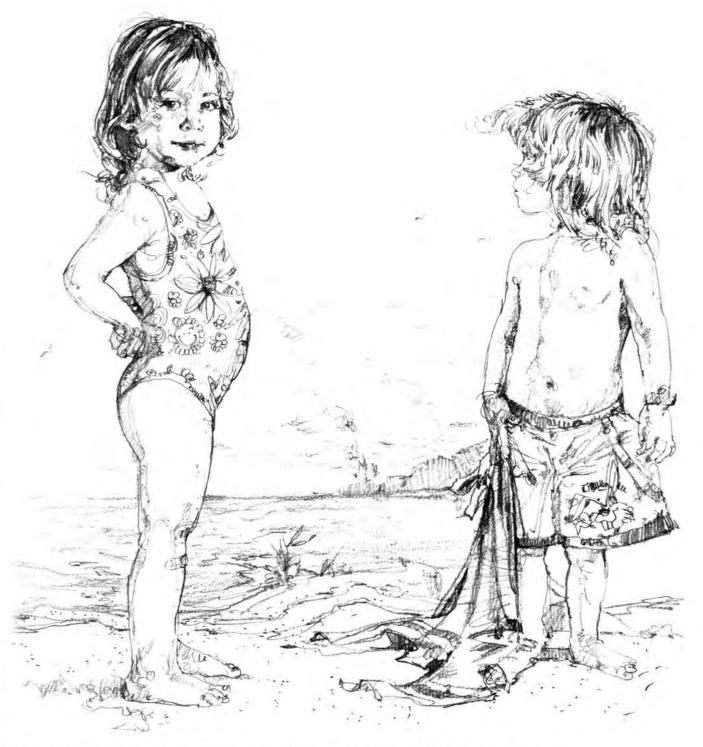

Exploring a Toddler's Proportions Toddlers are approximately 4 heads tall, which makes their heads appear disproportionately large.

Establishing a Child's Proportions By about age 10, most children are closer to adult proportions, standing about 7 heads tall.

Staging To make sure they were the center of attention, these two youngsters were placed right up front, so they dwarf the background scenery.

DRAWING THE DIFFERENCES

Of course, there's more to drawing children than making sure they are the right number of heads tall. Their facial proportions are different from an adult's (see pages 122 and 123), and they have pudgier hands and feet with relatively short fingers and toes. They often have slightly protruding stomachs, and their forms in general are soft and round. Keep your pencil lines soft and light when drawing children, and your strokes loose and fresh.

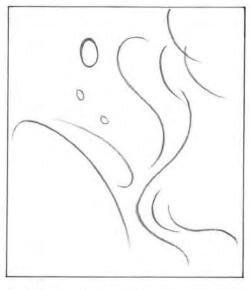

Studying Hands and Feet Study these drawings of children's hands and feet; then compare them to your own. Children's fingers are short and plump, with an almost triangular shape. Their feet are soft and fleshy, with a predominantly square shape.

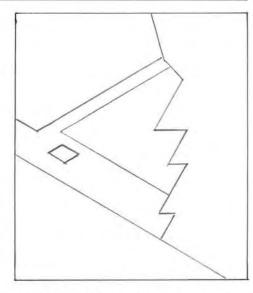

COMPOSING FIGURES BY WILLIAM F. POWELL

Creating a good composition is important in any drawing; therefore, let your subject(s) guide you. It's not necessary to place the main subject directly in the center of your composition. For example, the eyes of the girls below are looking in different directions, which determines where the girls are positioned.

Practicing Curvatures Curved lines are good composition elements—they can evoke harmony and balance in your work. Try drawing some curved lines around the paper. The empty areas guide you in placing figures around your drawing.

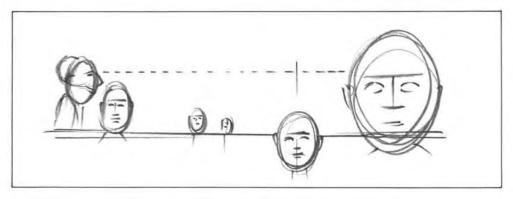

Producing Sharp Angles Sharp angles can produce dramatic compositions. Draw a few straight lines in various angles, and make them intersect at certain points. Zigzagging lines also form sharp corners that give the composition an energetic feeling.

Zooming In Intentionally drawing your subject larger than the image area, as in the example below, is also a unique composition. While part of the image may be cut off, this kind of close-up creates a dramatic mood.

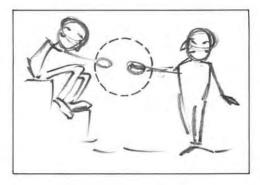

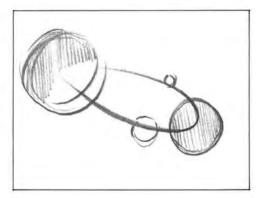

Combining Multiple Subjects You can create a flow or connection between multiple subjects in a composition by creatively using circles and ellipses, as shown to the right.

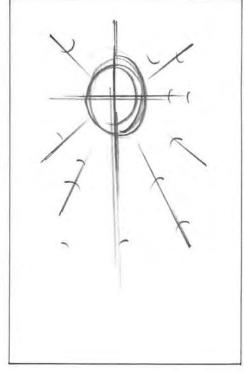

The compositions above and below illustrate how arm position, eyesight direction, and line intersection can guide the eye to a particular point of interest.

Using these examples, try to design some of your own original compositions.

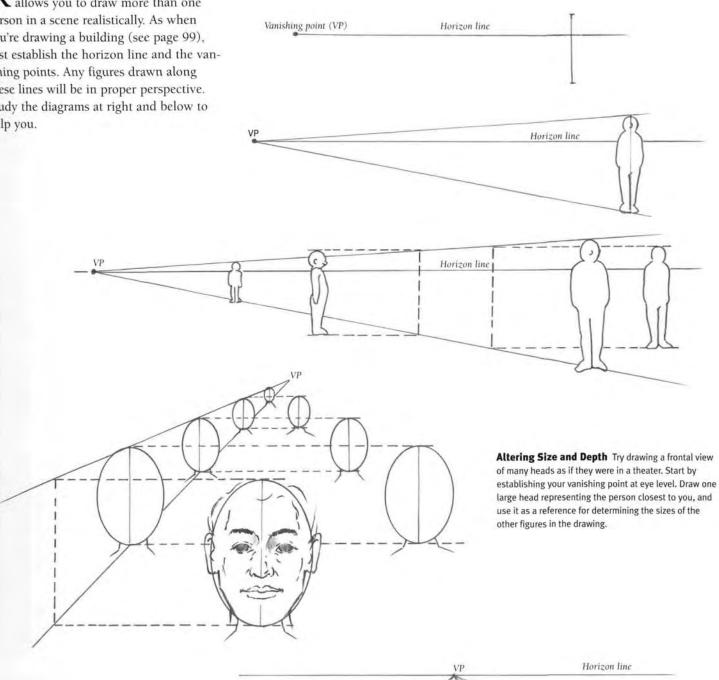

PEOPLE IN PERSPECTIVE BY WILLIAM F. POWELL

K nowing the principles of perspective allows you to draw more than one person in a scene realistically. As when you're drawing a building (see page 99), first establish the horizon line and the vanishing points. Any figures drawn along these lines will be in proper perspective. Study the diagrams at right and below to help you.

Drawing Full Figures The technique illustrated above can be applied when drawing entire figures, shown in the diagram at right. Although all of these examples include just one vanishing point, a composition can even have two or three vanishing points. (See pages 8-9.)
